IPL

BENEFITS OF AW3[®] IPL

- ✓ **Versatile:** In addition to hair removal, AW3[®] IPL technology is versatile and can be used to treat a variety of skin concerns. The device emits multiple wavelengths of light that can effectively address skin issues such as wrinkles, pigmentation, and overall skin rejuvenation. Thanks to its broad range of applications, AW3[®] IPL is a valuable tool in helping patients achieve their desired aesthetic outcomes.
- ✓ **Minimal downtime:** AW3[®] IPL treatments are often referred to as a "lunchtime procedure" because they are quick and generally do not require any downtime. Patients can typically resume their daily activities immediately after the treatment, with only minor redness or swelling that usually subsides within a few hours.
- ✓ **Long-lasting results:** AW3[®] IPL treatments are designed to deliver long-lasting results for hair removal and skin treatments. Depending on individual factors, such as skin type and hair thickness, multiple treatments may be necessary to achieve optimal results. However, once the desired outcome is achieved, proper maintenance can help ensure that the results endure over time. This feature makes AW3[®] IPL treatments a practical and cost-effective choice for patients seeking to enhance the appearance of their skin.

WHY IS AW3[®] THE BEST?

Allwhitelaser is a company that specialises in the development and manufacturing of high-quality laser systems for a range of medical and aesthetic applications. Their product offerings consist of diode lasers, IPL machines, and other aesthetic devices that are designed with safety, effectiveness, and user-friendliness in mind.

AW3[®] Lasers are characterised by their emphasis on research and development, which enables the creation of cutting-edge laser systems that provide superior performance and results. The company employs advanced technologies like water cooling, the exclusive Crystal Freeze[®], and intelligent control systems to ensure the safety and comfort of patients during treatments.

Overall, AW3[®] Laser is recognised for its commitment to quality, innovation, and results. It is worth noting, however, that the selection of the "best" laser system will depend on the specific needs and preferences of the individual, as well as the characteristics of the treated area.

What is IPL?

IPL, which stands for Intense Pulsed Light, is a hair reduction therapy that utilises multiple wavelengths of intense light energy to target hair pigments. This form of intense light therapy converts light energy into heat, which then damages the hair follicle and reduces hair growth. The multi-wavelength technology of IPL is not limited to hair reduction but is also

effective in skin rejuvenation and treating sun-damaged skin.

IPL and laser therapy are similar in their approach, but the main difference is that IPL delivers multiple wavelengths of light energy through a light filter, while laser therapy delivers a single wavelength. Both IPL and lasers are effective methods of treatment and have their respective benefits depending on the individual needs and characteristics of the patient.

AW3® - Known for its quality and innovation, produces some of the most effective IPL and laser systems worldwide.

Frequently asked questions

✓ Does IPL hair removal hurt?

During IPL hair removal, some discomfort is common and can feel like a rubber band snapping against the skin. However, the sensation is generally tolerable, and the innovative technology of Crystal Freeze® can help cool down the skin area, reducing the level of discomfort

✓ How many sessions do I need?

The number of sessions needed for effective IPL hair removal varies depending on the individual's hair type, skin color, and the area being treated. On average, 6-8 sessions are required for optimal results, spaced 4-6 weeks apart.

✓ How long does it take to see results?

After undergoing a few sessions of IPL hair removal, most people begin to notice a reduction in hair growth. However, it may take several more sessions to achieve optimal results, and maintenance treatments may be necessary to preserve the outcome over time.

✓ Is there anything I should avoid before or after IPL hair removal?

Before your IPL hair removal session, it is important to avoid sun exposure and tanning beds for at least two weeks. After the treatment, you should avoid sun exposure and hot baths or showers for 24-48 hours, and avoid picking or scratching the treated area. It is also important to apply sunscreen regularly to protect the skin from UV damage.
