

Real Patients, Real Results

Before & After (Between 1-3 sessions)

Get rid of your tattoos
with AW3®

The AW3® system offers more than just tattoo removal capabilities. With our advanced technology, we are able to address a range of skin conditions, such as sun damage, age spots, pigmentation issues, and other concerns. Our innovative Charcoal technique also allows for skin rejuvenation, providing a comprehensive solution for various skin-related needs. Whether you're seeking to remove a tattoo or address other skin concerns, the AW3® system offers a versatile and effective solution.

ARE YOU A GOOD CANDIDATE?

If you have a desire to remove a tattoo, you may be a suitable candidate for AW3® laser tattoo removal treatments. A consultation can help ascertain whether this treatment is a good fit for you based on your objectives, including the extent of removal you desire, the size and colour of your tattoo, and other relevant factors. Typically, individuals who seek to remove their tattoos for any reason are considered good candidates for this type of laser treatment.

LASER TATTOO REMOVAL
Removes all colours of tattoos

Unwanted Tattoos?

WHO CAN GET LASER TATTOO REMOVAL?

AW3® Laser tattoo removal treatments are effective on most ink colors and are safe for all skin types. Darker skin types may require extra care, and your practitioner will customize treatment to your needs.

HOW DOES TATTOO REMOVAL WORKS ?

The AW3® Laser creates extremely short pulses of light energy. Tattoo ink absorbs the energy, shatters into tiny fragments, and is removed by the immune system. Over a series of treatments, your tattoo will visibly fade away to reveal the natural look of your skin.

DOES IT HURT?

There is some discomfort associated with the procedure, but the level of discomfort can vary depending on several factors such as the size and location of the tattoo, the type of laser used, the individual's pain tolerance, and the experience of the person performing the procedure. But numbing solutions are available to maximize patient comfort.

WHAT ARE COMMON SIDE EFFECTS?

An immune response is necessary to flush the ink away from the tattoo site. Patients often experience temporary redness, swelling, tenderness, blisters, and scabs. Patients with darker skin tones may experience a temporary lightening or darkening of skin around the treated area.

HOW MANY SESSIONS ARE REQUIRED?

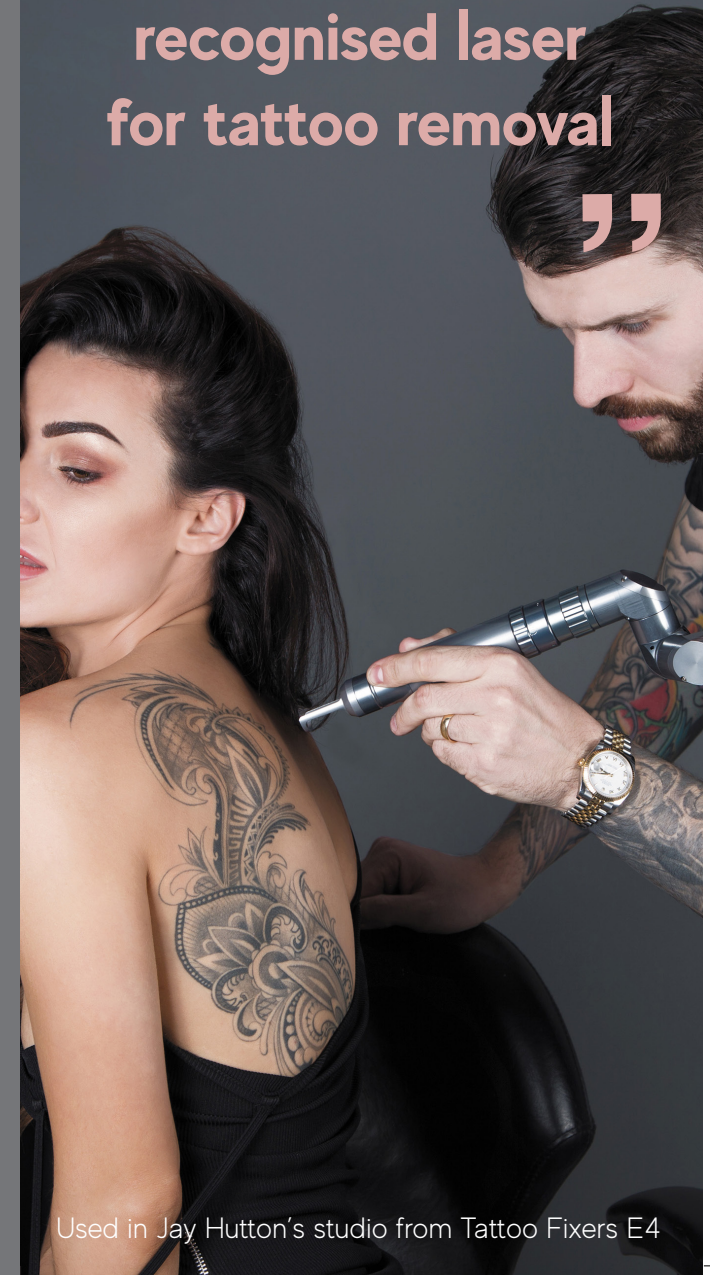

Most patients need between three and twelve treatments to achieve desired results. Many variables affect the number of treatments that each tattoo needs:

- ✓ Age of Tattoo
- ✓ Depth of Ink
- ✓ Ink Colors/Type
- ✓ Patient Health
- ✓ Location on Body
- ✓ Density of Ink
- ✓ Pre-existing Scarring
- ✓ Other Factors
