

**We can  
do it all!**

- From design to finished product.
- Broken parts repaired or remanufactured like new.
- Parts, pieces, or complete fabrication.
- Single or multiple part orders.
- Steel, aluminum or stainless.
- 24/7 after hours emergency services.

On the Tacoma waterfront since 1912, no one knows the Pacific Northwest or the business of machining like Pacific Machine.

Heavy Equipment  
Wood Working  
Food Production  
Paper Goods  
Marine  
Road Construction  
Plastics

Dust Pellum Under Construction

Dust Pellum Complete

## PACIFIC MACHINE

Machining companies *talk* about their commitment to Quality and Service. This is more than a small part of our customer service plan. We take it seriously. Exceeding our customer's expectations is central to our overall service plan. In addition, we are unique in our industry because of our diverse range of equipment capacity and our quality-conscious machinists and welders. These have been the driving forces of our success for almost 100 years.

## MACHINING

Our name, Pacific Machine, designates our Fundamental area of Expertise - *Machining*. Our in-shop equipment and personnel are skilled in both manual and CNC production machining using our SolidWorks Design software and MasterCam Machining software. Our industry-standard software enables us to meet a wide range of customer needs from single to multiple parts using CNC Machine Center and CNC Lathe. From equipment repair to total rebuild, we can handle all of our customer's requirements.

## REPAIR

Our experience spans a wide and varied industrial base, including the rebuild and manufacturing of components for the harsh environments of foundries, concrete mixing, and earthmoving equipment. Pacific Machine can handle the large and cumbersome components used in the ship building and ship repair industry. We have extensive experience repairing equipment for the hyper-clean and downtime-intolerant environments demanded by the food processing industry. We can repair the delicate and precision equipment used in custom and production cabinet shops as well as the equipment used for corrosive and highly-stressed paper manufacturing and plastics extrusion.

Each of these jobs comes with its own unique requirements. They can be as simple as a worn bearing journal requiring a weld build-up and machined to a precision fit. Or, as complex as equipment requiring complete disassembly, reverse engineering, and manufacturing of new components.

Quality, budget and equipment down-time are always our top priority.

## MANUFACTURING

Our combination of Design Software, machine and fabrication abilities gives our customers a "one-stop" manufacturing center.

Pacific Machine's role as a repair shop provides us with the surplus capacity to handle small, unique production runs of machined parts. We specialize in production runs starting with a single prototype up to hundreds of units. Our repair business has shown us how much our customers value short lead times and fast turnaround.

Specializing in small, unique production runs.
