Independent renewable-energy advisory

GAWC Renewables LLP is an India-registered renewable energy consulting company founded by two experienced wind engineers with extensive expertise in renewable energy resource assessment and project development.

The company supports developers, investors, lenders, and project stakeholders across multiple regions, including the Middle East, Africa, Southeast Asia, and Europe. Its technical expertise and regional experience help clients make informed investment and development decisions.

How GAWC supports project stakeholders

Risk reduction

Screen project fundamentals early, quantify resource uncertainty, and identify technical constraints before capital is committed.

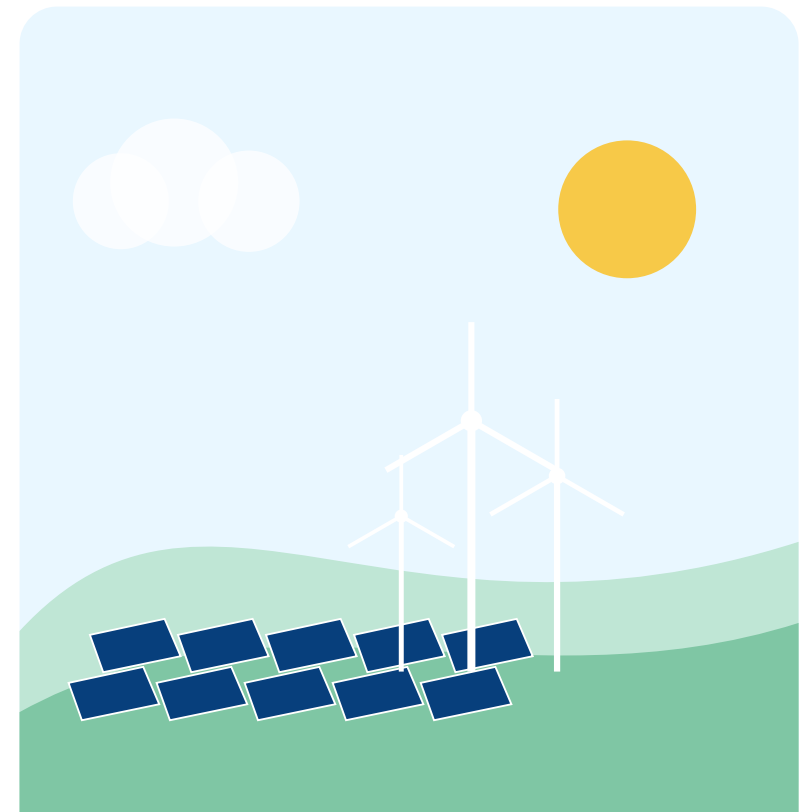

Bankability

Prepare independent technical inputs that strengthen lender, investor, and board confidence.

Development control

Support project teams through decision gates, procurement interfaces, and execution oversight.

Specialized advisory across the renewable project lifecycle

GAWC combines resource assessment discipline with transaction-grade technical advisory to support projects from screening through financing and execution.

Renewable Site Screening

Resource potential, constraints, grid access, land context, and development-fit review.

Wind Resource Assessment

Wind data review, long-term correction, production estimates, uncertainty, and layout support.

Solar Resource Assessment

Solar data analysis, irradiation benchmarking, yield assumptions, loss review, and risk inputs.

BESS Assessment

Storage sizing context, use-case review, dispatch assumptions, integration, and technical risk.

Technical Due Diligence

Independent review of design, resource basis, contracts, permits, technology, and readiness risks.

Lenders Technical Advisory

Bankability reporting, risk registers, condition precedent support, drawdown monitoring, and lender inputs.

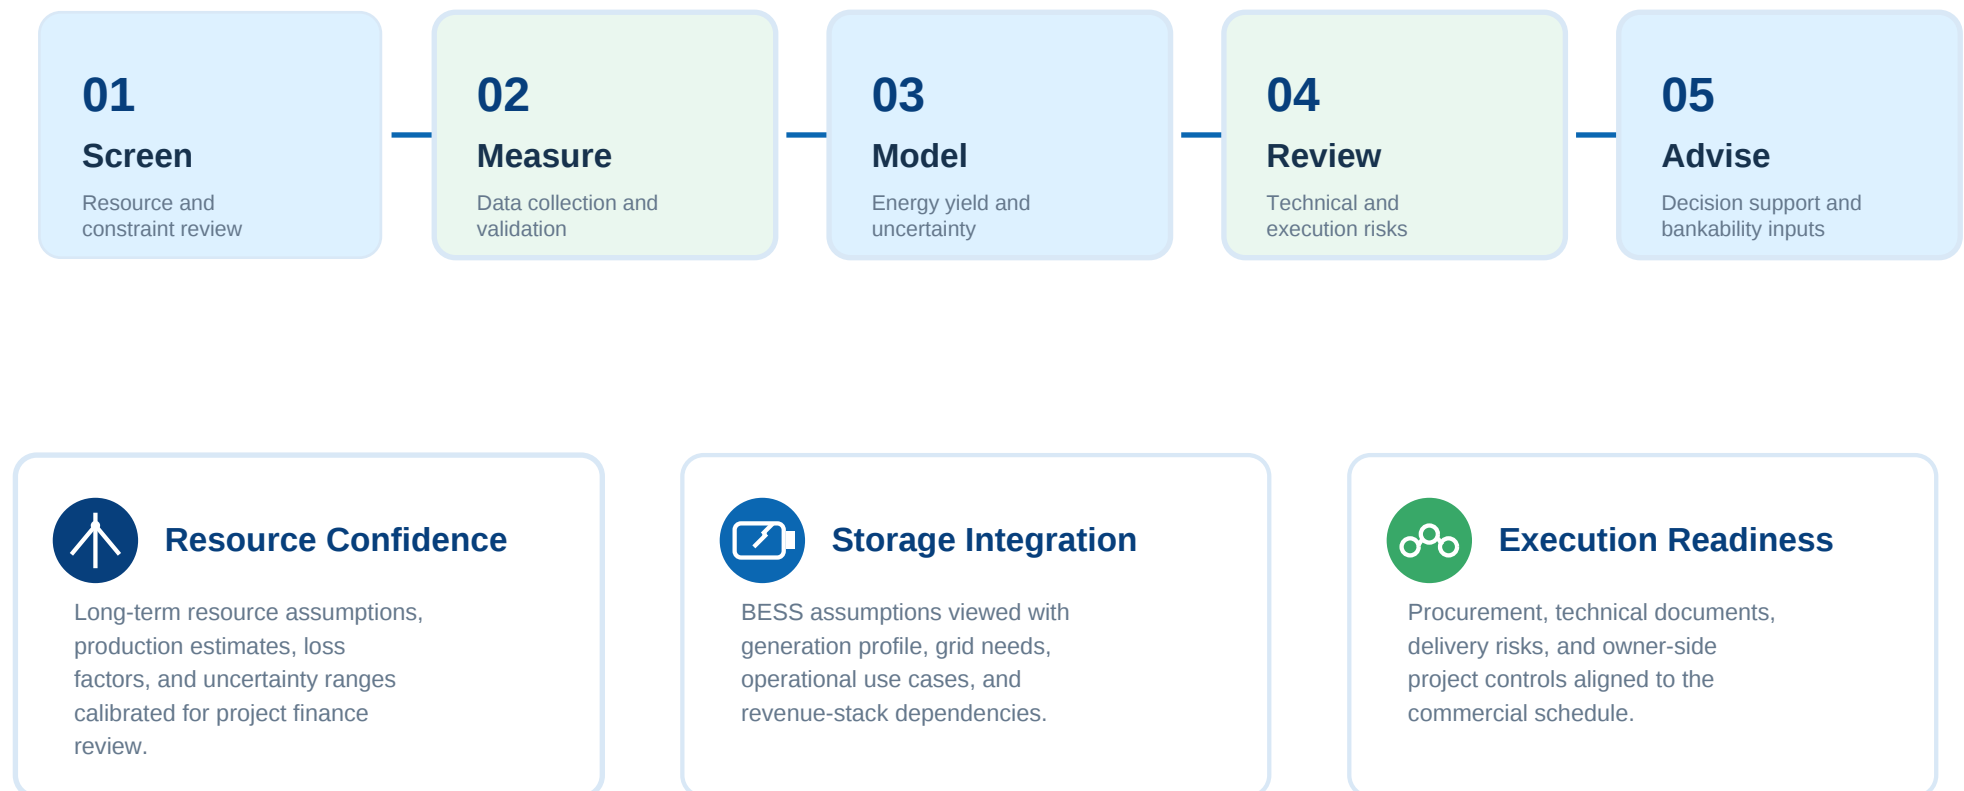

Project Management

Owner-side coordination across development, engineering, procurement, construction, and schedule actions.

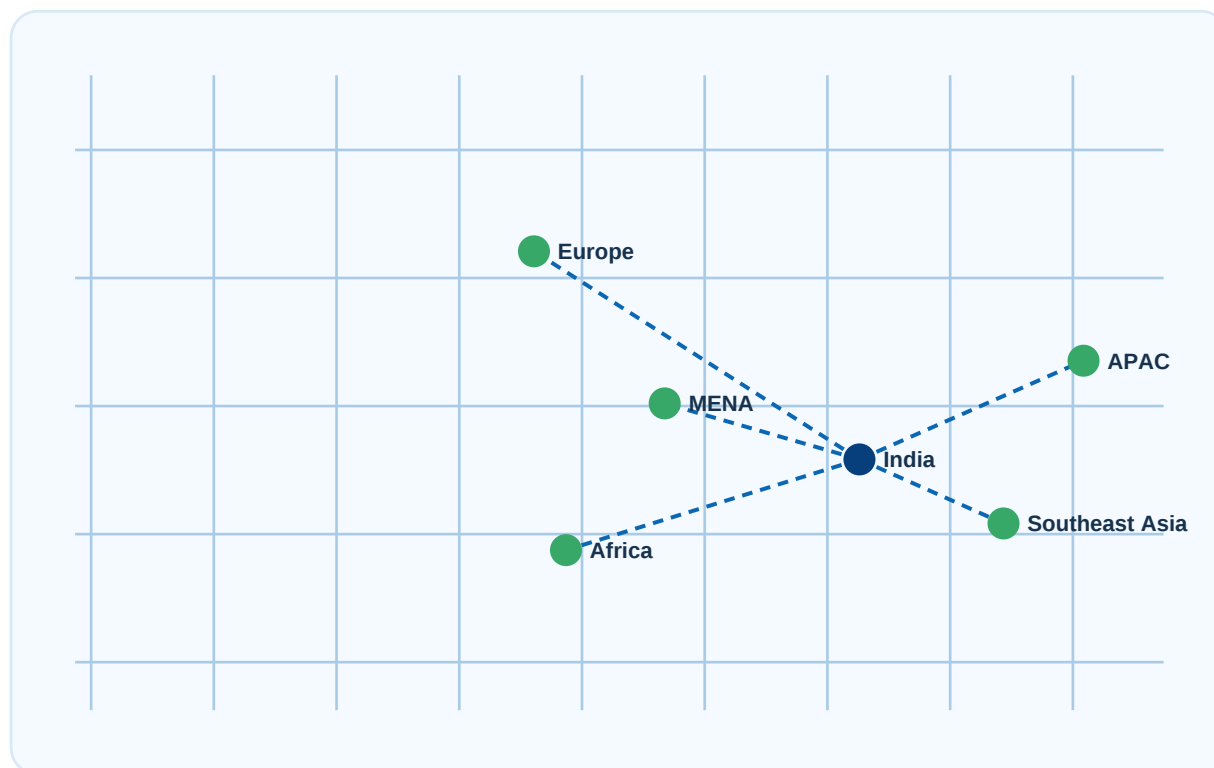

Structured analysis for investment-grade decisions

Each engagement is shaped around the decision the client needs to make: site selection, investment approval, acquisition review, financing, construction readiness, or project execution.

Supporting renewable-energy decisions across regions

GAWC has worked with wind farm developers, investors, and technical consultants across India, Europe, MENA, APAC, Africa, Southeast Asia, and the Middle East.

Client groups

- Wind farm developers
- Renewable-energy investors
- Lenders and financial institutions
- Technical consultants
- Project stakeholders and owners

Advisory emphasis

Reliable resource assessments and independent technical support for informed development and investment decisions.

Partner with GAWC Renewables

GAWC delivers high-quality, data-driven solutions that reduce project risks and enhance the bankability of renewable energy investments.

We would be delighted to explore potential opportunities for collaboration and discuss how our expertise can support your renewable energy investment objectives.
