

ABOUT SUMAGROW®

SumaGrow® is a blend of multi-functional native soil microbes selected for their abilities improve product performance and reduce fertilizer inputs. Products containing SumaGrow® have one of the highest microbial concentrations on the market, are all natural, organically-based, and contain no genetically-modified organisms. These award-winning formulations have repeatedly demonstrated the ability to increase crop yields while reducing fertilizer inputs. Overwhelmingly, the results demonstrate the ways in which the technology of SumaGrow® benefits the producer, the plant, the soil, and the environment.

SUMAGROW® BENEFITS INCLUDE:

- 1 Increased crop yields
- 2 Reduction and/or elimination of fertilizer inputs
- 3 Increased plant nutrient value
- 4 Increased water efficiency
- 5 More resistance to extreme temperatures and drought
- 6 OMRI and CDEA OIM listed products available

What's Inside Matters.

SOIL HEALTH MATTERS

Products containing SumaGrow® were created from the soil and for the soil. Our microbial products are soil specific and designed to work in the root zone of the plant to capture the surrounding nutrients for the plants' use. This microbe-soil-plant exchange produces maximum plant growth, health, and yield.

Products containing SumaGrow® can be applied to any crop which puts roots in the ground and can be used in conventional and organic productions. Our product line includes OMRI and CDFA OIM listed products.

LAWN AND GARDEN

Our product line for lawns ensures thick, uniform coverage even in those difficult shaded areas. Products containing SumaGrow® are perfect for shrubs, ornamental flowers, and trees. Our products are also safer for pets and families.

FRUIT AND VEGETABLE CROPS

One of the many benefits of using products containing SumaGrow® is healthier food with greater nutrient value per bite (as expressed in higher BRIX values). Studies have also shown an increase in overall crop production by 10 to 20 percent when recommended fertilizer rates are reduced by 25-50 percent on average.

ROW CROPS

Our products maximize producer profits by improving fertilizer efficiency and plant performance while reducing input costs. By improving the soil's water and nutrient holding capacity, our products save farmers time and money.

FORAGE AND HAY CROPS

SumaGrow® treated forages have tested higher in Crude Protein (CP) and Total Digestible Nutrients (TDN). Weight gain studies have shown an average of 0.2 pounds a day advantage. Our products free stored nutrients in the soil and allow them to be taken up by the grasses for optimal cattle growth, development and production.
