

Introduction to Stained Glass

This class will provide hands on instruction on how to safely cut glass, solder, and work with lead and copper foil. Students will choose a design, pick out their own glass, and construct one or more windows. All tools and supplies are provided. In addition, I will demonstrate methods for restoring antique stained-glass windows, building lamps using copper foil, working with fused glass, and using Glass Eye Software to make your own designs.

Andrew Miller has worked with stained glass for over 25 years. He designs and builds new windows, repairs antique windows and lamps. He learned this craft by studying on his own, taking classes in Mississippi, Nevada, Oregon, and Maine. He has taught introductory classes for the last 20 years in Mississippi, Maine, and Florida. He believes that as our world becomes more digital and impersonal, learning a craft will add meaning to your life.
