## WHY STATIC

Static rewards solve a host of problems. First, the reward amount is conditional upon the volume of the token being traded. This mechanism aims to alleviate some of the downward sell pressure put on the token caused by earlier adopters selling their tokens after farming higher APY's. Second, the reflect mechanism encourages holders to hang onto their tokens to garner higher kick-backs which are based upon a percentages carried out and dependent upon the total tokens held by the owner.

## AUTOMATIC LIQUIDITY POOL (LP)

Automatic LP is what drives BurnCoin growth. We have a function that acts as a two-fold beneficial implementation for holders. First, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a solid price floor. Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of BurnCoin as a reward for the holders. In theory, the added LP creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, thus increasing the tokens overall LP and supporting the price floor of the token. This is different from the burn function of other reflection tokens which is only beneficial in the short term from the granted reduction of supply.

As the BurnCoin token LP increases, the price stability mirrors this function with the benefit of a solid price floor and cushion for holders.

## MANUAL BURNS

Sometimes burns matter; sometimes they don't. A continuous burn on any one protocol can be nice in the early days, however, this means the burn cannot be finite or controlled in any way. Having burns controlled by the team and promoted based on achievements helps to keep the community rewarded and informed. The conditions of the manual burn and the amounts can be advertised and tracked.

BurnCoin aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term. Our BonFire events will allow for public streaming during "Burning". These community events provide further transparency into the state of the project.

Too often, deflationary tokens provide initial burns to attempt to establish trust and a quick spike. The BurnCoin had no initial or pre rollout burn and the excess supply tokens are used as rewards during BonFire events for our most loyal FiringSquad members.

Instead of destroying early tokens, we want those tokens to be in YOUR hands! Remember, ANY holder can burn tokens! As a community, we will all participate in right-sizing wallets. In early days, our tokens will be circulated in game, in community, and among friends and family.

## THE FIRINGSQUAD

Our Community sets us apart. The elite group of FiringSquad members have entered into a minimum balance pact and low sell/no sell agreement to enhance community trust. Members of the FiringSquad are actively promoting the coin, the usage in game and promotions and events.

## NFTS ARE HOT

Non Fungible Tokens are spreading like WILD FIRE! NFT's have been a part of our gaming and coin for some time. We are not just a "Coming Soon" site, our structure and vision is already being implemented on smaller scales. We believe if you build a strong community, then investments and HODLers will come. Too many coins have a shill first policy and our vision is long term growth. This includes more NFT integration for the BurnCoin and our Burn Arcade.

## BURN ARCADE

Our gaming starts in an RPG world of Play Dead Live. Our PDL Player's Portal is under construction and will soon add a complete player inventory system, account bound crypto BurnCoins, and nostalgic gamification. Our BurnCoin can be used to buy in game items or as entry fees in our retro arcade. The Burn Arcade travels through time from games with pixels to current AR concepts.

High Scores  
Milestones  
And More

## TIME TO HIT THE HIGH SCORE

BurnCoin employs 3 simple functions: Reflection + LP acquisition + Burn In each trade, the transaction is taxed a 10% fee, which is split 2 ways.

- 5% fee = redistributed to all existing holders
- 5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the BurnCoin tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

As the Fire spreads and wallet addresses increase, BOTH the BurnCoin and Burn Arcade will unlock NEW milestones for our FiringSquad! These will range from Bonfire Burns to lower Burn Arcade games. Competition comes with rewards and our EXTRA BurnCoin will be rewarded to our community. From live trivia events and BonFire Burns via Youtube, the Burn Arcade, and Play Dead Live to the coin that ties it all together, we give you the BurnCoin.

BUY the BURN and EARN the BURN.
