A Best Faculty Group in Meerut....

ADHIKAANSH ACADEMY
IITJEE NEET IX X XI XII

सही समय और सही दिशा में कड़ी मेहनत, तो सफलता पक्की!

*So why
to wait...*

DIRECTOR
DEEPAK SAINI (DSA SIR)
B.TECH, M.TECH
NSIT DELHI UNIVERSITY

**और Class 11th से ही शुरू करें,
Board के साथ-साथ,
NEET और IITJEE की तैयारी**

Special Classes For Students Studying in std. 9th & 10th.

EX. FACULTY OF RESONANCE KOTA, AAKASH INSTITUTE MUMBAI
225/5, 1ST FLOOR, PANCHSHEEL COLONY, BEHIND PINNACLE TOWER, GARH ROAD, MEERUT. ☎ 8057870069
www.adhikanshiitjeemedical.com | adhikanshiitjeemedical@gmail.com

**Take Dummy Admission
in Class 11th & Prepare For..**

IITJEE & NEET

**For Free Counselling &
Career Guidance contact on:**

Key Notes

Chapter-7

Integrals

- Integration is the inverse process of differentiation. In the differential calculus, we are given a function and we have to find the derivative or differential of this function, but in the integral calculus, we are to find a function whose differential is given. Thus, integration is a process which is the inverse of differentiation. Let $\frac{d}{dx}F(x) = ()$. Then we write $\int f(x)dx = F(x) + C$. These integrals are called indefinite integrals or general integrals, C is called constant of integration. All these integrals differ by a constant.
- From the geometric point of view, an indefinite integral is collection of family of curves, each of which is obtained by translating one of the curves parallel to itself upwards or downwards along the y-axis.
- Some properties of indefinite integrals are as follows:

$$1. \int [f(x) + g(x)]dx = \int f(x)dx + \int g(x)dx$$

$$2. \text{ For any real number } k, \int kf(x)dx = k \int f(x)dx$$

More generally, if $f_1, f_2, f_3, \dots, f_n$ are functions and k_1, k_2, \dots, k_n are real numbers. Then

$$\int [k_1f_1(x) + k_2f_2(x) + \dots + k_nf_n(x)]dx = k_1 \int f_1(x)dx + k_2 \int f_2(x)dx + \dots + k_n \int f_n(x)dx$$

- **Some standard integrals:**

$$(i) \int x^n dx = \frac{x^{n+1}}{n+1} + C, n \neq -1. \quad \text{Particularly, } \int x dx = \frac{x^2}{2} + C$$

$$(ii) \int \cos x dx = \sin x + C$$

$$(iii) \int \sin x dx = -\cos x + C$$

$$(iv) \int \sec^2 x dx = \tan x + C$$

$$(v) \int \operatorname{cosec}^2 x dx = -\cot x + C$$

Key Notes

$$(vi) \int \sec x \, dx = \sec x + C$$

$$(vii) \int \operatorname{cosec} x \cot x \, dx = -\operatorname{cosec} x + C$$

$$(viii) \int \frac{dx}{\sqrt{1-x^2}} = \sin^{-1} x + C$$

$$(ix) \int \frac{dx}{\sqrt{1-x^2}} = -\cos^{-1} x + C$$

$$(x) \int \frac{dx}{\sqrt{1+x^2}} = \tan^{-1} x + C$$

$$(xi) \int \frac{dx}{\sqrt{1+x^2}} = -\cot^{-1} x + C$$

$$(xii) \int e^x \, dx = e^x + C$$

$$(xiii) \int a^x \, dx = \frac{a^x}{\log a} + C$$

$$(xiv) \int \frac{dx}{x\sqrt{x^2-1}} = \sec^{-1} x + C$$

$$(xv) \int \frac{dx}{x\sqrt{x^2-1}} = -\operatorname{cosec}^{-1} x + C$$

$$(xvi) \int \frac{1}{x} \, dx = \ln|x| + C$$
