## IMPORTANT POINTS

$\diamond$ The word data means information. Statistical data are of two types :
(i) Primary data
(ii) Secondary data
$\diamond$ When an investigator collects data himself with a definite plan or design in his (her) mind, it is called Primary data.
$\diamond$ Data which are not originally collected rather obtained from published or unpublished sources are known as Secondary data.
$\diamond$ After collection of data, the investigator has to find ways to condense them in tabular form in order to study their salient features. Such an arrangement is called Presentation of data.
$\diamond$ Raw data (if the data is arranged in the manner as it was collected, then it is called as Raw data) when put in ascending or descending order of magnitude is called an array or arranged data.
$\diamond$ The number of times an observation occurs in the given data is called frequency of the observation
$\diamond$ Classes/class intervals are the groups in which all the observations are divided

Suppose class-interval is $10-20$, then 10 is called lower limit and 20 is called upper limit of the class
$\diamond$ Mid-value of class-interval is called Class-mark

$$
\begin{aligned}
& \text { Class-mark }=\frac{\text { lower limit }+ \text { upper limit }}{2} \\
& \text { Class-mark }=\text { lower limit }+\frac{1}{2}
\end{aligned}
$$

(difference between the upper and lower limits)
If the frequency of first class interval is added to the frequency of second class and this sum is added to third class and so on then frequencies so obtained are known as Cumulative Frequency (c.f.).
$\diamond$ There are two types of cumulative frequencies (a) less than, (b) greater than

## * EXAMPLES *

Ex. 1 Given below are the ages of 25 students of class IX in a school. Prepare a discrete frequency distribution.
$15,16,16,14,17,17,16,15,15,16,16,17,15$, $16,16,14,16,15,14,15,16,16,15,14,15$.

Sol. Frequency distribution of ages of 25 students

| Age | Tally marks | Frequency |
| :---: | :---: | :---: |
| 14 | IIII | 4 |
| 15 | NN III | 8 |
| 16 | NNNN | 10 |
| 17 | III | 3 |
| Total |  | 25 |

Ex. 2 Form a discrete frequency distribution from the following scores:-
$15,18,16,20,25,24,25,20,16,15,18,18$, $16,24,15,20,28,30,27,16,24,25,20,18$, $28,27,25,24,24,18,18,25,20,16,15,20$, $27,28,29,16$.

| Variate | Tally marks | Frequency |
| :---: | :---: | :---: |
| 15 | IIII | 4 |
| 16 | NNI | 6 |
| 18 | NNI | 6 |
| 20 | NNI | 6 |
| 24 | NN | 5 |
| 25 | $\mathbb{N}$ | 5 |
| 27 | III | 3 |
| 28 | III | 3 |
| 29 | I | 1 |
| 30 | I | 1 |
| Total |  | 40 |

Ex. 3 The water tax bills (in rupees) of 30 houses in a locality are given below. Construct a grouped frequency distribution with class size of 10 .
$30,32,45,54,74,78,108,112,66,76$, $88,40,14,20,15,35,44,66,75,84,95,96$, $102,110,88,74,112,14,34,44$.

Sol. Here the maximum and minimum values of the variate are 112 and 14 respectively.
$\therefore \quad$ Range $=112-14=98$.
It is given that the class size is 10 , and

$$
\frac{\text { Range }}{\text { Class size }}=\frac{98}{10}=9.8
$$

So, we should have 10 classes each of size 10. If we take the first class as $14-24$ it includes the minimum value 14 . If the last class is taken as 104-114, then it includes the maximum value 112 . In the class $14-24,14$ is included but 24 is excluded. Similarly, in other classes, the lower limit is included and the upper limit is excluded. Now

| Bill (in rupees) | Tally marks | Frequency |
| :---: | :---: | :---: |
| $14-24$ | IIII | 4 |
| $24-34$ | II | 2 |
| $34-44$ | III | 3 |
| $44-54$ | III | 3 |
| $54-64$ | I | 1 |
| $64-74$ | II | 2 |
| $74-84$ | IN | 5 |
| $84-94$ | III | 3 |
| $94-104$ | III | 3 |
| $104-114$ | IIII | 4 |
| Total |  | 30 |

Ex. 4 The marks obtained by 40 students of class IX in an examination are given below :
$18,8,12,6,8,16,12,5,23,2,16,23$, $2,10,20,12,9,7,6,5,3,5,13,21,13$, $15,20,24,1,7,21,16,13,18,23,7,3$, $18,17,16$.

Present the data in the form of a frequency distribution using the same class size, one such class being 15-20 (where 20 is not included)

Sol. Frequency Distribution of Marks

| Marks | Tally marks | Frequency |
| :--- | :---: | :---: |
| $0-5$ | NNI | 6 |
| $5-10$ | NN NI | 10 |
| $10-15$ | NXIII | 8 |
| $15-20$ | NXIII | 8 |
| $20-25$ | XNIII | 8 |
|  | Total | 40 |

Ex. 5 The class marks of a distribution are :
$47,52,57,62,67,72,77,82,87,92,97,102$ Determine the class size, the class limits and the true class limits.

Sol. Here the class marks are uniformly spaced. So, the class size is the difference between any two consecutive class marks
$\therefore \quad$ Class size $=52-47=5$
We know that, if a is the class mark of a class interval and $h$ is its class size, then the lower and upper limits of the class interval are
$a-\frac{h}{2}$ and $a+\frac{h}{2}$ respectively.
$\therefore$ Lower limit of first class interval

$$
\begin{aligned}
& =47-\frac{5}{2} \\
& =44.5
\end{aligned}
$$

And, upper limit of first class interval

$$
\begin{aligned}
& =47+\frac{5}{2} \\
& =49.5
\end{aligned}
$$

So, first class interval is $44.5-49.5$

Similarly, we obtain the other class limits as given under :

| Class marks | Class limits |
| :---: | :---: |
| 47 | $44.5-49.5$ |
| 52 | $49.5-54.5$ |
| 57 | $54.5-59.5$ |
| 62 | $59.5-64.5$ |
| 67 | $64.5-69.5$ |
| 72 | $69.5-74.5$ |
| 77 | $74.5-79.5$ |
| 82 | $79.5-84.5$ |
| 87 | $84.5-89.5$ |
| 92 | $89.5-94.5$ |
| 97 | $94.5-99.5$ |
| 102 | $99.5-104.5$ |

Since the classes are exclusive, so the true class limits are same as the class limits.

Ex. 6 The class marks of a distribution are 26, 31, $36,41,46,51,56,61,66,71$. Find the true class limits.

Sol. Here the class marks are uniformly spaced. So, the class size is the difference between any two consecutive class marks.
$\therefore \quad$ Class size $=31-26=5$.
If $a$ is the class mark of a class interval of size $h$, then the lower and upper limits of the class interval are $\mathrm{a}-\frac{\mathrm{h}}{2}$ and $\mathrm{a}+\frac{\mathrm{h}}{2}$ respectively.

Here $\quad h=5$
$\therefore$ Lower limit of first class interval

$$
=26-\frac{5}{2}=23.5
$$

And, upper limit of first class interval

$$
=26+\frac{5}{2}=28.5
$$

$\therefore$ First class interval is $23.5-28.5$.
Thus, the class intervals are:
$23.5-28.5,28.5-33.5,33.5-38.5$, $38.5-43.5,43.5-48.5,48.5-53.5$

Since the class are formed by exclusive method. Therefore, these limits are true class limits.

## $>$ CUMULATIVE FREQUENCY TABLE

A table which displays the manner in which cumulative frequencies are distributed over various classes is called a cumulative frequency distribution or cumulative frequency table.

Ex. 7 The marks obtained by 35 students in a class are given below. Construct the cumulative frequency table :

| Marks <br> obtained | Number of <br> students |
| :---: | :---: |
| 0 | 1 |
| 1 | 2 |
| 2 | 4 |
| 3 | 4 |
| 4 | 3 |
| 5 | 5 |
| 6 | 4 |
| 7 | 6 |
| 8 | 3 |
| 9 | 2 |
| 10 | 1 |

Sol.

| Marks | Frequency | Number of students |
| :---: | :---: | :---: |
| 0 | 1 | 1 |
| 1 | 2 | $3(=1+2)$ |
| 2 | 4 | $7(=1+2+4)$ |
| 3 | 4 | $11(=1+2+4+4)$ |
| 4 | 3 | $14(=1+2+4+4+3)$ |
| 5 | 5 | $23(=1+2+4+4+3+5)$ |
| 6 | 4 | $29(=1+2+4+4+3+5+4+6)$ |
| 7 | 6 | $34(=1+2+4+4+3+5+4+6+3)$ |
| 8 | 3 | $35(=1+2+4+4+3+5+4+6+3+2+1)$ |
| 9 | 2 |  |
| 10 | 1 |  |

Ex. 8 The distribution of ages (in years) of 40 persons in a colony is given below.

| Age | Number of |
| :---: | :---: |
| (in years) | Persons |
| $20-25$ | 7 |
| $25-30$ | 10 |
| $30-35$ | 8 |
| $35-40$ | 6 |
| $40-45$ | 4 |
| $45-50$ | 5 |

(a) Determine the class mark of each class
(b) What is the upper class limit of 4th class
(c) Determine the class size

Sol. (a) Class marks are
$\frac{20+25}{2}, \frac{25+30}{2}, \frac{30+35}{2}, \frac{35+40}{2}, \frac{40+45}{2}, \frac{45+50}{2}$.
$=22.5,27.5,32.5,37.5,42.5,47.5$
(b) The fourth class interval is 35-40. Its upper limit is 40
(c) The class size is $25-20=5$

Ex. 9 Following is the distribution of marks of 40 students in a class. Construct a cumulative frequency distribution table.

| Marks | Number of students |
| :---: | :---: |
| $0-10$ | 3 |
| $10-20$ | 8 |
| $20-30$ | 9 |
| $30-40$ | 15 |
| $40-50$ | 5 |

Sol.

| Class <br> interval | Frequency | Cumulative <br> Frequency |
| :---: | :---: | :---: |
| $0-10$ | 3 | 3 |
| $10-20$ | 8 | $11(=3+8)$ |
| $20-30$ | 9 | $20(=3+8+9)$ |
| $30-40$ | 15 | $35(=3+8+9+15)$ |
| $40-50$ | 5 | $40(=3+8+9+15+5)$ |
| Total $=40$ |  |  |

Ex. 10 The class marks of a distribution are 25, 35, $45,55,65$ and 75.

Determine the class size and class limit.
Sol. $\quad$ Class size $=$ The difference between the class marks of two adjacent classes.
$=35-25$
$=10$
We need classes of size 10 with class marks as $25,35,45,55,65,75$

The class limits for the first class are
$25-\frac{10}{2}$ and $25+\frac{10}{2}$
i.e. 20 and 30

First class is, therefore, 20-30
Similarly, the other classes are $30-40,40-50$, $50-60,60-70,70-80$

Ex. 11 Given below is the cumulative frequency distribution table showing the marks secured by 40 students.

| Marks | Number of <br> students |
| :---: | :---: |
| Below 20 | 5 |
| Below 40 | 10 |
| Below 60 | 25 |
| Below 80 | 32 |
| Below 100 | 40 |

Show in the class and their frequency form.
Sol.

| Marks | Cumulative <br> frequency | Frequency |
| :---: | :---: | :---: |
| $0-20$ | 5 | 5 |
| $20-40$ | 10 | $5(=10-5)$ |
| $40-60$ | 25 | $15(=25-10)$ |
| $60-80$ | 32 | $7(=32-25)$ |
| $80-100$ | 40 | $8(=40-32)$ |

## Graphical representation of data

The graphical representations such as bar graphs, histograms, frequency polygons, etc.

## Bar graph (diagram) of a data

A bar graph (diagram) is a pictorial representation of the data by a series of bars or rectangles of uniform width standing on the same horizontal (or vertical) base line with equal spacing between the bars. Each rectangle or bar represents only one numerical value of the data. The height (or length in case the base is on a vertical line) of each bar is proportional to the numerical values of the data.
For example, we are given a data about the household expenditure of a family as below :

| Heads of <br> expenditure | Expenditure <br> (in thousand reupees) |
| :---: | :---: |
| Rent | 5 |
| Grocery | 2 |
| Education | 3 |
| Transport | 2 |
| Miscellaneous | 4 |

We draw the bar graph for the above data as below:

The horizontal axis is generally called x -axis and the vertical axis as the y -axis.

1. Each bar of a bar diagram has same width.
2. Space between two consecutive bars is same throughout.

## * EXAMPLES *

Ex. 12 In figure, the bar diagram presents the expenditure (in proportionate figures) on five different sports. If the total expenditure incurred on all the sports in a particular year be $j 2,00,000$, then find the amount spent
(i) on hockey
(ii) on cricket

Sol. Proportionate amount spent on Football, Hockey, Cricket, Basketball, and volleyball are in the ratio $3: 4: 6: 2: 5$ respectively. Total amount spent $=j 2,00,000$.
Now, $3+4+6+2+5=20$.
Amount spent on hockey
$=\mathrm{j}-2,00,000 \times \frac{4}{20}$
$=j 40,000$
Amount spent on cricket
$=j 2,00,000 \times \frac{6}{20}$
$=j 60,000$
Ex. 13 Compare the academic standard of two classes A and B each of 40 students on the basis of the following data by making bar diagram.

| Marks : | $0-10$ | $10-30$ | $30-60$ | $60-100$ |
| :--- | :---: | :---: | :---: | :---: |
| No. of <br> students <br> in A : | 5 | 10 | 20 | 5 |
| No. of <br> students <br> in B : | 10 | 15 | 10 | 5 |

Sol.

Ex. 14 Read the bar graph in figure and answer the following :

(i) What information is given by the bar graph?
(ii) What was the quantity of rice production in the year 1980-81.
(iii) What is the difference between the maximum and minimum production of rice in the time span of 1978-1983.
Sol. (i) The bar graph, represents production of rice in the period 1978-1983 (year-wise).
(ii) The bar for 1980-81 has length $=55$.

Therefore, the production of rice in the year 1980-81 is 55 lakh tons.
(iii) In the year 1981-82, the production of rice is maximum and is equal to 65 lakh tons. In the year 1979-80, the production of rice is minimum and is equal to 25 lakh tons.
The difference between the maximum and the minimum production

$$
\begin{aligned}
& =65 \text { lakh tons }-25 \text { lakh tons } \\
& =40 \text { lakh tons }
\end{aligned}
$$

## HISTOGRAM

A histogram is a graphical representation of frequency distribution in the form of rectangle with class interval as the bases and heights proportional to corresponding frequency. There is no gap between rectangles

## Construction of a histogram of a continuous grouped frequency distribution

(i) Take a graph paper and draw two perpendicular lines, one horizontal and one vertical, intersecting at $O$ (say). Mark them as OX and OY .
(ii) Take horizontal line OX as X -axis and vertical line OY as Y -axis
(iii) Choose a suitable scale and along X -axis represent class limits
(iv) Choose a suitable scale for Y -axis and mark frequencies along Y -axis.
(v) Construct rectangles with class intervals as bases and respective frequencies as heights.

Construction of a histogram of a continuous grouped frequency distribution with unequal class intervals.
(i) Take a graph paper and draw two perpendicular lines, one horizontal and one vertical, intersecting at $O$ (say). Mark them as OX and OY .
(ii) Take horizontal line OX as X -axis and vertical line OY as Y -axis.
(iii) Choose a suitable scale along X -axis and represent class-limits on it.
(iv) Determine a class-interval which has the minimum class size. Let the minimum class size be $h$.
(v) Compute the adjusted frequencies of each class by using the following formula:

Adjusted Frequency of a class
$=\frac{\mathrm{h}}{\text { Class size }} \times$ Frequency of the class
These adjusted frequencies are the heights of each rectangle of histogram but widths will be according to class limits.
(vi) Choose a suitable scale for Y -axis and mark adjusted frequencies along Y -axis.
(vii) Construct rectangles with class intervals as bases and respective adjusted frequencies as heights.

## Construction of a histogram when mid-points of class-intervals are given

(i) Compute the difference between second and first mid-point. Let it be $h$.
(ii) Divide the difference h by 2 .
(iii) Subtract $\frac{\mathrm{h}}{2}$ from first mid-point to get the lower limit of first class and add $\frac{\mathrm{h}}{2}$ to first mid-point to get the upper limit of first class.
(iv) Repeat first three steps for all other mid-points.

* EXAMPLES *

Ex. 15 The following table gives the marks scored by 100 students in an entrance examination.

| Marks | No. of students (Frequency) |
| :---: | :---: |
| $0-10$ | 4 |
| $10-20$ | 10 |
| $20-30$ | 16 |
| $30-40$ | 22 |
| $40-50$ | 20 |
| $50-60$ | 18 |
| $60-70$ | 8 |
| $70-80$ | 2 |

Represent this data in the form of a histogram.

Sol. We represent the class limits along X-axis on a suitable scale and the frequencies along Y axis on a suitable scale.

Ex. 16 The following is the distribution of weights (in kg ) of 50 persons :

| weight (in kg) | No. of persons |
| :---: | :---: |
| $50-55$ | 12 |
| $55-60$ | 8 |
| $60-65$ | 5 |
| $65-70$ | 4 |
| $70-75$ | 5 |
| $75-80$ | 7 |
| $80-85$ | 6 |
| $85-90$ | 3 |

Draw a histogram for the above data.
Sol. We represent the class limits along X-axis on a suitable scale and the frequencies along Y axis on a suitable scale.

Since the scale on X -axis starts at 50 , a kink (break) is idicated near the origin to signify that the graph is drawn to scale begining at 50 , and not at the origin.

Ex. 17 Represent the following data by means of historgram.

| Weekly wages <br> (in Rs): | No. of workers <br> (Frequency): |
| :---: | :---: |
| $10-15$ | 7 |
| $15-20$ | 9 |
| $20-25$ | 8 |
| $25-30$ | 5 |
| $30-40$ | 12 |
| $40-60$ | 12 |
| $60-80$ | 8 |

Sol. Here the class intervals are of unequal width. So, we shall first compute adjusted frequencies of each class. The minimum class size is $15-10=5$. The adjusted frequencies are computed by using the following formula :
Adjusted frequency of a class
$=\frac{\text { Minimum class }- \text { size }}{\text { Class }- \text { size }} \times$ Frequency of the class
The adjusted frequencies are computed in the following table :

| Weekly wages <br> (in Rs): |  | Adjusted <br> frequency |
| :--- | ---: | :---: |
| $10-15$ | 7 | $\frac{5}{5} \times 7=7$ |
| $15-20$ | 9 | $\frac{5}{5} \times 9=9$ |
| $20-25$ | 8 | $\frac{5}{5} \times 8=8$ |
| $25-30$ | 5 | $\frac{5}{5} \times 5=5$ |
| $30-45$ | 12 | $\frac{5}{10} \times 12=6$ |
| $40-60$ | 12 | $\frac{5}{20} \times 12=3$ |
| $60-80$ | 8 | $\frac{5}{20} \times 8=2$ |

Ex. 18 Draw a histogram for the marks of students given below:

| Marks : | No.of students : |
| :---: | :---: |
| $0-10$ | 8 |
| $10-30$ | 32 |
| $30-45$ | 18 |
| $45-50$ | 10 |
| $50-60$ | 6 |

Sol. Here, minimum class-size $=5$.
So, we adjust the frequencies by using the following formula:

Adjusted frequency of a class
$=\frac{\text { Minimum class }- \text { size }}{\text { Class }- \text { size }} \times$ Frequency of the class
The adjusted frequencies are computed as follows :

| Class <br> intervals <br> (Marks) | No. of students <br> (Frequency) | Adjusted <br> Frequency |
| :---: | :---: | :---: |
| $0-10$ | 8 | $\frac{5}{10} \times 8=4$ |
| $10-30$ | 32 | $\frac{5}{20} \times 32=8$ |
| $30-45$ | 18 | $\frac{5}{15} \times 18=6$ |
| $45-50$ | 10 | $\frac{5}{5} \times 10=10$ |
| $50-60$ | 6 | $\frac{5}{10} \times 6=3$ |

Ex. 19 Construct a histogram from the following distribution of total marks obtained by 65 students of IX class in the final examination.

| Marks (mid - points) : | No. of students : |
| :---: | :---: |
| 150 | 8 |
| 160 | 10 |
| 170 | 25 |
| 180 | 12 |
| 190 | 7 |
| 200 | 3 |

Sol. Ascertainment of lower and upper class limits Since the difference between the second and first mid-point is $160-150=10$.

$$
\therefore \quad \mathrm{h}=10 \Rightarrow \frac{\mathrm{~h}}{2}=5
$$

So, lower and upper limits of the first class are $150-5$ and $150+5$ i.e. 145 and 155 respectively.
$\therefore$ First class interval is $145-155$.

Using the same procedure, we get the classes of other mid-points as under :

| Marks: | No. of students: |
| :---: | :---: |
| $145-155$ | 8 |
| $155-165$ | 10 |
| $165-175$ | 25 |
| $175-185$ | 12 |
| $185-195$ | 7 |
| $195-205$ | 3 |

The histogram of the above frequency distribution is given in Fig.

Ex. 20 Draw a histogram for the following data:

| Class : | Frequency: |
| :---: | :---: |
| $25-29$ | 5 |
| $30-34$ | 15 |
| $35-39$ | 23 |
| $40-44$ | 20 |
| $45-49$ | 10 |
| $50-54$ | 7 |

The histogram of the above frequency distribution is given in Fig.

Class-interval $\longrightarrow$
Ex. 21 The expenditure of a company under different heads (in millions of rupees) is given below.

| Head | Expenditure |
| :--- | :---: |
| salary | 20 |
| Raw material | 40 |
| Transport | 10 |
| Rent | 5 |
| Others | 15 |

Draw a bar chart to depict the above data.
Sol. The required bar chart is given below :

Ex. 22 Draw a histogram for the data given below.

| Cost of living index <br> $100-110$ | number of weeks <br> 2 |
| :---: | :---: |
| $110-120$ | 3 |
| $120-130$ | 5 |
| $130-140$ | 8 |
| $140-150$ | 4 |

Sol. The required histogram is given below

Ex. 23 Draw a histogram to represent the following data of marks obtained by 50 students of a class.

| Marks | No. of students |
| :---: | :---: |
| $10-20$ | 4 |
| $20-30$ | 12 |
| $30-40$ | 15 |
| $40-50$ | 8 |
| $50-60$ | 5 |
| $60-70$ | 4 |
| $70-80$ | 2 |

Sol. The class intervals showing the marks are taken along the X -axis and the number of students along the Y-axis. The histogram is shown below.

Ex. 24 The daily earnings of 40 workers of a factory are given below :

| Daily earnings <br> (in rupees) | No. of workers |
| :---: | :---: |
| $51-60$ | 5 |
| $61-70$ | 10 |
| $71-80$ | 12 |
| $81-90$ | 6 |
| $91-100$ | 4 |
| $101-110$ | 3 |

Sol. The given distribution is inclusive (discontinuous). So we are to change it to a continuous distribution. As the gap between the upper limit of the first class and the lower limit of the second class is 1 , the true class limits of the first class are 50.5 and 60.5 . The class boundaries (true class limits) of the other classes are similarly determined. The continuous distribution table is then shown below.

| Daily earnings (in rupees) | No. of workers |
| :---: | :---: |
| $50.5-60.5$ | 5 |
| $60.5-70.5$ | 10 |
| $70.5-80.5$ | 12 |
| $80.5-90.5$ | 6 |
| $90.5-100.5$ | 4 |
| $100.5-110.5$ | 3 |

The histogram is shown below.

The earning are taken along the horizontal axis and the number of workers along the vertical axis. As we start from 50.5 (not zero according to scale) a kink (break) is indicated near the origin to show that the graph is drawn to scale, starting from 50.5.

## FREQUENCY POLYGON

A frequency polygon is the polygon obtained by joining the mid-points of upper horizontal sides of all the rectangles in a histogram.

## Construction of a frequency polygon with Histogram.

(i) Obtain the frequency distribution and draw a histogram representing it.
(ii) Obtain the mid-points of the upper horizontal side of each rectangle.
(iii) Join these mid-points of the adjacent rectangles of the histogram by dotted line segments.
(iv) Obtain the mid-points of two class-intervals of zero frequency i.e. on X -axis, one adjacent to the first, on its left and one adjacent to the last, on its right

These class-intervals are known as imagined class intervals.
(v) Complete the polygon by joining the mid-points of first and last class intervals to the mid-points of imagined class-intervals adjacent to them.

## Construction of a frequency polygon without using a histogram

(i) Obtain the frequency distribution.
(ii) Compute the mid-points of class intervals i.e. class marks.
(iii) Represent class marks on X -axis on a suitable scale.
(iv) Represent frequencies on Y -axis on a suitable scale.
(v) Plot the points $\left(\mathrm{x}_{\mathrm{i}}, \mathrm{f}_{\mathrm{i}}\right)$ where $\mathrm{x}_{\mathrm{i}}$ denotes class mark and $f_{i}$ corresponding frequency.
(vi) Join the points plotted in step V by line segments.
(vii) Take two class intervals of zero frequency, one at the begining and the other at the end. Obtain their mid-points.

These classes are known as imagined classes.
(viii) Complete the frequency polygon by joining the mid-points of first and last class intervals to the mid-points of the imagined classes adjacent to them.

## * EXAMPLES *

Ex. 25 For the following data, draw a histogram and a frequency polygon :

| Marks : | No. of students : |
| :---: | :---: |
| $0-10$ | 5 |
| $10-20$ | 10 |
| $20-30$ | 4 |
| $30-40$ | 6 |
| $40-50$ | 7 |
| $50-60$ | 3 |
| $60-70$ | 2 |
| $70-80$ | 2 |
| $80-90$ | 3 |
| $90-100$ | 9 |

Sol. In Fig. a histogram and a frequency polygon (in dotted lines) are drawn on the same scale.

Ex. 26 Construct a frequency polygon for the following data :

| Age(in years): | Frequency : |
| :---: | :---: |
| $0-2$ | 2 |
| $2-4$ | 4 |
| $4-6$ | 6 |
| $6-8$ | 8 |
| $8-10$ | 9 |
| $10-12$ | 6 |
| $12-14$ | 5 |
| $14-16$ | 3 |
| $16-18$ | 1 |

Sol. First we obtain the class marks as given in the following table.

| Age(in years) : | Class marks | Frequency |
| :---: | :---: | :---: |
| $0-2$ | 1 | 2 |
| $2-4$ | 3 | 4 |
| $4-6$ | 5 | 6 |
| $6-8$ | 7 | 8 |
| $8-10$ | 9 | 9 |
| $10-12$ | 11 | 6 |
| $12-14$ | 13 | 5 |
| $14-16$ | 15 | 3 |
| $16-18$ | 17 | 1 |

Ex. 27 Prepare frequency polygon with the help of histogram from the following data :

| Classes | $0-6$ | $6-12$ | $12-18$ | $18-24$ | $24-30$ | $30-36$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Freque <br> -ncies | 4 | 8 | 15 | 20 | 12 | 6 |

Sol. We plot the classes (-6-0), (0-6), (6-12), (12-18), (18-24), (24-30), (30-36) and (36-42) along the x -axis. The frequencies of these classes are respectively, $0,4,8,15,20,12,6$ and 0 . These frequencies are plotted along the $y$-axis.

After drawing the histogram for the data, we join the mid-points of the top sides of the rectangles of the histogram. The frequency polygon is made with dotted line segments.

Ex. 28 Draw frequency polygon for the data given below, without drawing histogram :

| Classes | $140-$ <br> 150 | $150-$ <br> 160 | $160-$ <br> 170 | $170-$ <br> 180 | $180-$ <br> 190 | $190-$ <br> 200 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Freque <br> -ncies | 5 | 10 | 20 | 9 | 6 | 2 |

Sol. We have the classes
130-140, 140-150, 150-160, 160-170, 170-180, 180-190, 190-200, 200-210 having frequencies $0,5,10,20,9,6,2,0$ respectively.

The class marks of the classes are
$\frac{130+140}{2}=135, \frac{140+150}{2}=145, \ldots \ldots$,
$\frac{200+210}{2}=205$ respectively.
We take class marks along x -axis and the frequencies along y-axis.
We plot the points $(135,0),(145,5)$, $(155,10),(165,20),(175,9),(185,6)$, $(195,2)$ and $(205,0)$. Now, we joint these points and get the required frequency polygon ABCDEFGH as in figure.

Ex. 29 Ages (in years) of the members of two sports clubs were recorded and the data collected is as under.

| Age (in years) | Number of <br> members <br> of Club A | Number of <br> members <br> of Club B |
| :---: | :---: | :---: |
| $20-29$ | 5 | 10 |
| $30-39$ | 10 | 15 |
| $40-49$ | 15 | 10 |
| $50-59$ | 10 | 5 |
| $60-69$ | 20 | 10 |
| $70-79$ | 5 | 15 |
| Total | 65 | 65 |

Represent the ages of the members of the sports clubs A and B on the same graph by two frequency polygons. Compare the pattern of the two clubs according to ages of the members.

Sol. The class marks of the classes
20-29, 30-39, 40-49, 50-59, 60-69, 70-79 are $24.5,34.5,44.5,54.5,64.5,74.5$ respectively. The corresponding frequencies for clubs A and $B$ are $5,10,15,10,20,5 ; 10,15,10,5$, 10,15 respectively.

For the club $A$, the frequency polygon is drawn by joining the points $(14.5,0)$, $(24.5,5),(34.5,10),(44.5,15),(54.5,10)$, $(64.5,20),(74.5,5),(84.5,0)$.

For the club B , the frequency polygon is drawn by joining the points $(14.5,0)$, $(24.5,10),(34.5,15),(44.5,10),(54.5,5)$, $(64.5,10),(74.5,15),(84.5,0)$.

We observe that the club B is more youthful in comparison to club A.

Ex. 30 The following table gives the distribution of students of two sections according to the marks obtained by them.

| Section A |  | Section B |  |
| :---: | :---: | :---: | :---: |
| Marks | Frequency | Marks | Frequency |
| $0-10$ | 3 | $0-10$ | 5 |
| $10-20$ | 9 | $10-20$ | 19 |
| $20-30$ | 17 | $20-30$ | 15 |
| $30-40$ | 12 | $30-40$ | 10 |
| $40-50$ | 9 | $40-50$ | 1 |

Represent the marks of the students of both the sections on the same graph by two frequency polygons. From the two polygons compare the performance of the two section.

Sol. Class marks for section A are : 5, 15, 25, 35, 45 and corresponding frequencies as $3,9,17$, 12, 9 respectively.
Its frequency polygon is the join of the points (by line segments) $(-5,0),(5,3),(15,9)$, $(25,17),(35,12),(45,9)$ and $(60,0)$.

Similarly for the section $B$, the frequency polygon is the join of the points $(-5,0)$, $(5,5),(15,19),(25,15),(35,10),(45,1)$ and $(60,0)$.

We draw the two frequency polygon :

Class Marks $\longrightarrow$

Ex. 31 Make a histogram and a frequency polygon from the given data :

| Marks | No. of students |
| :---: | :---: |
| $30-40$ | 12 |
| $40-50$ | 18 |
| $50-60$ | 26 |
| $60-70$ | 16 |
| $70-80$ | 10 |
| $80-90$ | 6 |

Sol. The frequency polygon has been shown by dotted lines

MEAN
If $x_{1}, x_{2}, x_{3}, \ldots ., x_{n}$ are $n$ values of a variable $X$, then the arithmetic mean or simply the mean of these values is denoted by $\bar{X}$ and is defined as

$$
\overline{\mathrm{X}}=\frac{\mathrm{x}_{1}+\mathrm{x}_{2}+\mathrm{x}_{3} \ldots+\mathrm{x}_{\mathrm{n}}}{\mathrm{n}}=\frac{1}{\mathrm{n}}\left(\sum_{\mathrm{i}=1}^{\mathrm{n}} \mathrm{x}_{\mathrm{i}}\right)
$$

Here the symbol $\sum_{i=1}^{n} x_{i}$ denotes the sum $x_{1}+$ $\mathrm{x}_{2}+\mathrm{x}_{3}+\ldots .+\mathrm{x}_{\mathrm{n}}$.
$\diamond$ If $\bar{X}$ is the mean of $n$ observations $x_{1}, x_{2}, \ldots$, $x_{n}$, then the mean of the observations $x_{1}+a$, $x_{2}+a, \ldots, x_{n}+a$ is $\bar{X}+a$ i.e. if each observation is increased by a, then the mean is also increased by a
If $\bar{X}$ is the mean of $x_{1}, x_{2}, . . x_{n}$ then the mean of $a x_{1}, a x_{2}, \ldots x_{n}$ is $a \bar{X}$, where $a$ is any number different from zero i.e. if each observation is multiplied by a non-zero number a, then the mean is also multiplied by a.

If $\bar{X}$ is the mean of $n$ observations $x_{1}, x_{2}$, $x_{3} \ldots, x_{n}$, then the mean of $\frac{x_{1}}{a}, \frac{x_{2}}{a}, \frac{x_{3}}{a}, \ldots$, $\frac{x_{n}}{a}$ is $\frac{\bar{X}}{a}$, where a is any non-zero number
If $\bar{X}$ is the mean of $n$ observations $x_{1}, x_{2}$ $\ldots x_{n}$, then the mean of $x_{1}-a, x_{2}-a, \ldots, x_{n}-a$ is $\overline{\mathrm{X}}-\mathrm{a}$, where a is any real number
$\diamond$ Advantages
(i) Arithmetic mean is simple to understand and easy to calculate.
(ii) It is rigidly defind.
(iii) It is suitable for further algebraic treatment.
(iv) It is least affected fluctuation of sampling.
(v) It takes into account all the values in the series.

## Disadvantages

(i) It is highly affected by the presence of a few abnormally high or abnormally low scores.
(ii) In absence of a single item, its value becomes inaccurate.
(iii) It can not be determined by inspection

## * EXAMPLES *

Ex. 32 If the mean of $n$ observations $a x_{1}, a_{2}, a_{3}, \ldots$, $\mathrm{ax}_{\mathrm{n}}$ is a $\bar{X}$, show that

$$
\left(a x_{1}-a \bar{X}\right)+\left(a x_{2}-a \bar{X}\right)+\ldots+\left(a x_{n}-a \bar{X}\right)=0
$$

Sol. We have

$$
\begin{aligned}
& \quad a \bar{X}=\frac{a x_{1}+a x_{2}+\ldots+a x_{n}}{n} \\
& \Rightarrow a x_{1}+a x_{2}+\ldots+a x_{n}=n(a \bar{X}) \quad \ldots .(i) \\
& \text { Now, }\left(a x_{1}-a \bar{X}\right)+\left(a x_{2}-a \bar{X}\right)+\ldots+\left(a x_{n}-a \bar{X}\right) \\
& =\left(a x_{1}+a x_{2}+\ldots+a x_{n}\right)-(a \bar{X}+\underset{\mathrm{X}}{\mathrm{X}}+\ldots+\mathrm{a} \bar{X}) \\
& =n(a \bar{X})-n(a \bar{X})=0 .
\end{aligned}
$$

Ex. 33 The mean of 40 observations was 160. It was detected on rechecking that the value of 165 was wrongly copied as 125 for computation of mean. Find the correct mean.

Sol. $\quad \Theta$ Here, $n=40, \overline{\mathrm{X}}=160$
So, $\overline{\mathrm{X}}=\frac{1}{\mathrm{n}}\left(\sum \mathrm{x}_{\mathrm{i}}\right) \Rightarrow 160=\frac{1}{40}\left(\sum \mathrm{x}_{\mathrm{i}}\right)$
$\Rightarrow \sum \mathrm{x}_{\mathrm{i}}=160 \times 40=6400$
$\Rightarrow$ Incorrect value of $\sum \mathrm{x}_{\mathrm{i}}=6400$
Now,
Correct value of $\sum \mathrm{x}_{\mathrm{i}}$
$=$ Incorrect value of $\sum \mathrm{x}_{\mathrm{i}}-$ Incorrect item

+ Correct item
$\Rightarrow$ Correct value of $\sum \mathrm{x}_{\mathrm{i}}=6400-125$

$$
+165=6440
$$

$\therefore$ Correctmean

$$
=\frac{\text { Correct value of } \sum \mathrm{x}_{\mathrm{i}}}{\mathrm{n}}=\frac{6440}{40}=161 .
$$

Ex. 34 The mean of 10 numbers is 20. If 5 is subtracted from every number, what will be the new mean?

Sol. Let $x_{1}, x_{2}, \ldots, x_{10}$ be 10 numbers with their mean equal to 20 . Then,

$$
\begin{align*}
& \overline{\mathrm{X}}=\frac{1}{\mathrm{n}}\left(\sum \mathrm{x}_{\mathrm{i}}\right) \\
\Rightarrow & 20=\frac{\mathrm{x}_{1}+\mathrm{x}_{2}+\ldots+\mathrm{x}_{10}}{10} \\
\Rightarrow & \mathrm{x}_{1}+\mathrm{x}_{2}+\ldots+\mathrm{x}_{10}=200 \tag{i}
\end{align*}
$$

New numbers are $\mathrm{x}_{1}-5, \mathrm{x}_{2}-5, \ldots, \mathrm{x}_{10}-5$.
Let $\overline{\mathrm{X}}$ ' be the mean of new numbers.
Then,

$$
\begin{aligned}
& \overline{\mathrm{X}}^{\prime}=\frac{\left(\mathrm{x}_{1}-5\right)+\left(\mathrm{x}_{2}-5\right)+\ldots+\left(\mathrm{x}_{10}-5\right)}{10} \\
& \overline{\mathrm{X}}^{\prime}=\frac{\left(\mathrm{x}_{1}+\mathrm{x}_{2}+\ldots+\mathrm{x}_{10}\right)-5 \times 10}{10}=\frac{200-50}{10} \\
& \overline{\mathrm{X}}^{\prime}=15 .
\end{aligned}
$$

## * EXAMPLES *

Ex. 35 Neeta and her four friends secured 65, 78, 82, 94 and 71 marks in a test of mathematics.

Find the average (arithmetic mean) of their marks.

Sol. Arithmetic mean or average
$=\frac{65+78+82+94+71}{5}$
$=\frac{390}{5}=78$
Hence, arithmetic mean $=78$
Ex. 36 The mean of 5, 7, p, 11, 15, 17, and 20 is 12, find p .

Sol. $\quad$ Mean $=\frac{5+7+\mathrm{p}+11+15+17+20}{7}$
$\Rightarrow 12=\frac{75+\mathrm{p}}{7}$
$\Rightarrow \mathrm{p}+75=12 \times 7$
$\Rightarrow \mathrm{p}=9$
Ex. 37 If the mean of 5 observations is 15 and that of another 10 observations is 20 , find the mean of all 15 observations

Sol. Let first five observations be $\mathrm{x}_{1}, \ldots, \mathrm{x}_{5}$

$$
\begin{align*}
& \Rightarrow \text { Mean }=\frac{x_{1}+x_{2} \ldots+x_{5}}{5} \\
& \Rightarrow 15=\frac{x_{1}+x_{2} \ldots+x_{5}}{5} \\
& \Rightarrow x_{1}+\ldots+x_{5}=75 \tag{i}
\end{align*}
$$

Let next ten observations be $\mathrm{y}_{1}+\ldots+\mathrm{y}_{10}$.
$\Rightarrow$ Mean $=\frac{\mathrm{y}_{1}+\ldots+\mathrm{y}_{10}}{10}$
$\Rightarrow 20=\frac{\mathrm{y}_{1}+\ldots+\mathrm{y}_{10}}{10}$

$$
\begin{equation*}
\mathrm{y}_{1}+\ldots+\mathrm{y}_{10}=200 \tag{ii}
\end{equation*}
$$

The mean of all 15 observations will be
$\frac{\left(\mathrm{x}_{1}+\ldots+\mathrm{x}_{5}\right)+\left(\mathrm{y}_{1}+\ldots+\mathrm{y}_{10}\right)}{15}$
$=\frac{75+200}{15} \quad$ (from (i) and (ii))
$=18.33$

If a variate X takes values $\mathrm{x}_{1}, \mathrm{x}_{2} \ldots \mathrm{x}_{\mathrm{n}}$ with corresponding frequencies $\mathrm{f}_{1}, \mathrm{f}_{2}, \mathrm{f}_{3}, \ldots, \mathrm{f}_{\mathrm{n}}$ respectively, then arithmetic mean of these values is

$$
\overline{\mathrm{X}}=\frac{\mathrm{f}_{1} \mathrm{x}_{1}+\mathrm{f}_{2} \mathrm{x}_{2}+\ldots+\mathrm{f}_{\mathrm{n}} \mathrm{x}_{\mathrm{n}}}{\mathrm{f}_{1}+\mathrm{f}_{2}+\ldots+\mathrm{f}_{\mathrm{n}}}
$$

or $\bar{X}=\frac{\sum_{i=1}^{n} f_{i} x_{i}}{N}$, where $N=\sum_{i=1}^{n} f_{i}=f_{1}+f_{2}+\ldots+f_{n}$
Ex. 38 Find the mean of the following distribution :
x: $\begin{array}{llllll}4 & 6 & 9 & 10 & 15\end{array}$
f: $\begin{array}{llllll}5 & 10 & 10 & 7 & 8\end{array}$

Sol. Calculation of Arithmetic Mean

| $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :--- | :--- | :--- |
| 4 | 5 | 20 |
| 6 | 10 | 60 |
| 9 | 10 | 90 |
| 10 | 7 | 70 |
| 15 | 8 | 120 |
|  | $\mathrm{~N}=\Sigma \mathrm{f}_{\mathrm{i}}=40$ | $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=360$ |

$\therefore \quad$ Mean $=\overline{\mathrm{X}}=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\Sigma \mathrm{f}_{\mathrm{i}}}=\frac{360}{40}=9$.
Ex. 39 Find the mean of the following distribution :

| x | 10 | 30 | 50 | 70 | 89 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| f | 7 | 8 | 10 | 15 | 10 |

Sol. Calculation of Mean

| $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| 10 | 7 | 70 |
| 30 | 8 | 240 |
| 50 | 10 | 500 |
| 70 | 15 | 1050 |
| 89 | 10 | 890 |
|  |  |  |
|  | $\sum \mathrm{f}_{\mathrm{i}}=\mathrm{N}=50$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=2750$ |

$\therefore \quad$ Mean $=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\mathrm{N}}=\frac{2750}{50}=55$.

Ex. 40 Find the value of p, if the mean of following distribution is 7.5 .

| $\mathrm{x}:$ | 3 | 5 | 7 | 9 | 11 | 13 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{y}:$ | 6 | 8 | 15 | $P$ | 8 | 4 |

Sol.

| $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| 3 | 6 | 18 |
| 5 | 8 | 40 |
| 7 | 15 | 105 |
| 9 | p | 9 p |
| 11 | 8 | 88 |
| 13 | 4 | 52 |
|  | $\mathrm{~N}=\mathrm{Sf}_{\mathrm{i}}=41+\mathrm{p}$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=303+9 \mathrm{p}$ |

We have, $\Sigma \mathrm{f}_{\mathrm{i}}=41+\mathrm{p}, \Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=303+9 \mathrm{p}$
$\therefore \quad$ Mean $=\frac{\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\Sigma \mathrm{f}_{\mathrm{i}}} \Rightarrow 7.5=\frac{303+9 \mathrm{p}}{41+\mathrm{p}}$
$\Rightarrow 7.5 \times(41+\mathrm{p})=303+9 \mathrm{p}$
$\Rightarrow 307.5+7.5 \mathrm{p}=303+9 \mathrm{p}$
$\Rightarrow 9 \mathrm{p}-7.5 \mathrm{p}=307.5-303$
$\Rightarrow 1.5 \mathrm{p}=4.5 \Rightarrow \mathrm{p}=3$
Ex. 41 Find the missing frequencies in the following frequency distribution if it is known that the mean of the distribution is 1.46 .

| Number of <br> accidents (x) : | 0 | 1 | 2 | 3 | 4 | 5 | Total |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Frequency (f): | 46 | $?$ | $?$ | 25 | 10 | 5 | 200 |

Sol. Let the missing frequencies be $\mathrm{f}_{1}$ and $\mathrm{f}_{2}$

| $\mathrm{x}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}}$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| 0 | 46 | 0 |
| 1 | $\mathrm{f}_{1}$ | $\mathrm{f}_{1}$ |
| 2 | $\mathrm{f}_{2}$ | 75 |
| 3 | 25 | $2 \mathrm{f}_{2}$ |
| 4 | 10 | 40 |
| 5 | 5 | 25 |
|  | $\mathrm{~N}=86+\mathrm{f}_{1}+\mathrm{f}_{2}$ | $\Sigma \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=140+\mathrm{f}_{1}+2 \mathrm{f}_{2}$ |

We have : $\mathrm{N}=200$
$\therefore 200=86+\mathrm{f}_{1}+\mathrm{f}_{2} \Rightarrow \mathrm{f}_{1}+\mathrm{f}_{2}=114$

Also,
Mean $=1.46$
$\Rightarrow 1.46=\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\mathrm{N}} \Rightarrow 1.46=\frac{140+\mathrm{f}_{2}+2 \mathrm{f}_{2}}{200}$
$\Rightarrow 292=140+\mathrm{f}_{1}+2 \mathrm{f}_{2}$
$\Rightarrow \mathrm{f}_{1}+2 \mathrm{f}_{2}=152$
Solving (i) and (ii) we get $\mathrm{f}_{1}=76$ and $\mathrm{f}_{2}=38$.
Ex. 42 If the mean of the following data be 9.2, find the value of p .

| $x$ | 4 | 6 | 7 | $p+4$ | 12 | 12 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| f | 5 | 6 | 4 | 10 | 8 | 7 |

Sol.

| x | f | f.x |
| :---: | :---: | :---: |
| 4 | 5 | 20 |
| 6 | 6 | 36 |
| 7 | 4 | 28 |
| $\mathrm{p}+4$ | 10 | $10 \mathrm{p}+40$ |
| 12 | 8 | 96 |
| 14 | 7 | 98 |
| Total | 40 | $318+10 \mathrm{p}$ |

Now,
Mean $\overline{\mathrm{x}}=\frac{\Sigma \mathrm{f} \cdot \mathrm{x}}{\Sigma \mathrm{f}}=\frac{318+10 . \mathrm{p}}{40}$
$\therefore \quad 9.2=\frac{318+10 . \mathrm{p}}{40}$
$\Rightarrow 318+10 \cdot \mathrm{p}=368 \Rightarrow 10 \mathrm{p}=50 \Rightarrow \mathrm{p}=5$
Ex. 43 The marks of 30 students are given below, find the mean marks.

| Marks | Number of Students |
| :---: | :---: |
| 10 | 4 |
| 11 | 3 |
| 12 | 8 |
| 13 | 6 |
| 14 | 7 |
| 15 | 2 |

## Sol.

| x | f | fx |
| :---: | :---: | :---: |
| 10 | 4 | 40 |
| 11 | 3 | 33 |
| 12 | 8 | 96 |
| 13 | 6 | 78 |
| 14 | 7 | 98 |
| 15 | 2 | 30 |
|  | $\Sigma \mathrm{f}=30$ | $\Sigma \mathrm{fx}=375$ |

$$
\begin{aligned}
\text { Mean } & =\frac{\Sigma \mathrm{fx}}{\Sigma \mathrm{f}}=\frac{375}{30} \\
& =12.5
\end{aligned}
$$

## GROUPED FREQUENCY DISTRIBUTION

## There are $\mathbf{3}$ methods for calculation of mean :

1. Direct Method
2. Assumed mean deviation method
3. Step deviation method.

## Direct Method for Calculation of Mean

| mid-value | frequency | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| $\mathrm{x}_{1}$ | $\mathrm{f}_{1}$ | $\mathrm{f}_{1} \mathrm{x}_{1}$ |
| $\mathrm{x}_{2}$ | $\mathrm{f}_{2}$ | $\mathrm{f}_{2} \mathrm{x}_{2}$ |
| $\vdots$ | $\vdots$ | $\vdots$ |
| $\mathrm{x}_{\mathrm{k}}$ | $\mathrm{f}_{\mathrm{k}}$ | $\mathrm{f}_{\mathrm{k}} \mathrm{x}_{\mathrm{k}}$ |
| Total | N | $\sum_{\mathrm{i}=1}^{\mathrm{k}} \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |

According to direct method

$$
\begin{aligned}
& \bar{x}=\frac{x_{1} f_{1}+x_{2} f_{2}+\ldots+x_{k} f_{k}}{f_{1}+f_{2}+\ldots+f_{k}}=\frac{\sum_{i=1}^{k} x_{i} f_{i}}{\sum f_{i}}=\frac{1}{N} \sum_{1}^{k} f_{i} x_{i} \\
& {\left[N=f_{1}+f_{2}+\ldots+f_{k}\right]}
\end{aligned}
$$

## EXAMPLES *

| Mid-values | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequencies | 49 | 43 | 57 | 38 | 13 |

Find the mean by direct method.
Sol.

| Mid-values | Frequencies $\left(\mathrm{f}_{\mathrm{i}}\right)$ | $\mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}$ |
| :---: | :---: | :---: |
| 2 | 49 | 98 |
| 3 | 43 | 129 |
| 4 | 57 | 228 |
| 5 | 38 | 190 |
| 6 | 13 | 78 |
| Total | $\mathrm{N}=\sum \mathrm{f}_{\mathrm{i}}=200$ | $\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}=723$ |

$$
\begin{aligned}
\text { Mean } & =\frac{\sum \mathrm{f}_{\mathrm{i}} \mathrm{x}_{\mathrm{i}}}{\sum \mathrm{f}_{\mathrm{i}}}=\frac{723}{200} \\
& =3.615
\end{aligned}
$$

Ex. 45 Find the mean of the following frequency distribution:

| Class Interval | Frequency |
| :---: | :---: |
| $10-30$ | 90 |
| $30-50$ | 20 |
| $50-70$ | 30 |
| $70-90$ | 20 |
| $90-110$ | 40 |

Sol.

| Class <br> interval | f | Mid value (x) | fx |
| :---: | :---: | :---: | :---: |
| $10-30$ | 90 | 20 | 1800 |
| $30-50$ | 20 | 40 | 800 |
| $50-70$ | 30 | 60 | 1800 |
| $70-90$ | 20 | 80 | 1600 |
| $90-110$ | 40 | 100 | 4000 |
|  | $\sum \mathrm{f}=200$ |  | $\sum \mathrm{fx}=10000$ |

$\operatorname{Mean}(\overline{\mathrm{x}})=\frac{\sum \mathrm{fx}}{\sum \mathrm{f}}=\frac{10000}{200}=50$
Ex. 46 A survey was conducted by a group of students as a part of their environment awareness programme, in which they collected the following data regarding the number of plants in 20 houses in a locality. Find the mean number of plants per house.

| Number of <br> plants | $0-2$ | $2-4$ | $4-6$ | $6-8$ | $8-10$ | $10-12$ | $12-14$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. of <br> houses | 1 | 2 | 1 | 5 | 6 | 2 | 3 |

Which method did you use for finding the mean and why?

Sol.

| Number of <br> plants | Number of <br> houses (f) | Mid value x | fx |
| :---: | :---: | :---: | :---: |
| $0-2$ | 1 | 1 | 1 |
| $2-4$ | 2 | 3 | 6 |
| $4-6$ | 1 | 5 | 5 |
| $6-8$ | 5 | 7 | 35 |
| $8-10$ | 6 | 9 | 54 |
| $10-12$ | 2 | 11 | 22 |
| $12-14$ | 3 | 13 | 39 |
|  | $\sum \mathrm{f}=20$ |  | $\sum \mathrm{fx}=162$ |

Mean $=\frac{\sum \mathrm{fx}}{\sum \mathrm{f}}=\frac{162}{20}=8.1$

## MEDIAN

Median of a distribution is the value of the variable which divides the distribution into two equal parts i.e. it is the value of the variable such that the number of observations above it is equal to the number of observations below it.
$\diamond$ If the values $x_{i}$ in the raw data. are arranged in order of increasing or decreasing magnitude, then the middle, most value in the arrangement is called the median.

## Algorithm :

Step I : Arrange the observations (values of the variate) in ascending or descending order of magnitude.
Step II : Determine the total number of observations, say, n.

Step III : If n is odd, then
Median $=$ value of $\left(\frac{\mathrm{n}+1}{2}\right)^{\text {th }}$ observation
If n is even, then
Median
Value of $\left(\frac{\mathrm{n}}{2}\right)^{\text {th }}$ observation + Value of

$\diamond$ The median can be calculated graphically.
Median is not affected by extreme values.

## EXAMPLES *

Ex. 47 Find the median of the following data:
$25,34,31,23,22,26,35,28,20,32$
Sol. Arranging the data in ascending order, we get20, 22, 23, 25, 26, 28, 31, 32, 34, 35

Here, the number of observations $\mathrm{n}=10$ (even).
$\therefore$ Median
Value of $\left(\frac{10}{2}\right)^{\text {th }}$ observation + Value
$=\frac{\text { of }\left(\frac{10}{2}+1\right)^{\text {th }} \text { observation }}{2}$
$\Rightarrow$ Median

$$
=\frac{\begin{array}{c}
\text { Value of } 5^{\text {th }} \text { observation }+ \text { value } \\
\text { of } 6^{\text {th }} \text { observation }
\end{array}}{2}
$$

$\therefore \quad$ Median $=\frac{26+28}{2}=27$
Hence, median of the given data is 27 .
Ex. 48 Find the median of the following values :
37, 31, 42, 43, 46, 25, 39, 45, 32
Sol. Arranging the data in ascending order, we have $25,31,32,37,39,42,43,45,46$
Here, the number of observations $\mathrm{n}=9$ (odd)
$\therefore$ Median $=$ Value of $\left(\frac{9+1}{2}\right)^{\text {th }}$ observation

$$
=\text { Value of 5th observation }=39 .
$$

Ex. 49 The median of the observations 11, 12, 14, 18,
$x+2, x+4,30,32,35,41$ arranged in ascending order is 24 . Find the value of $x$.

Sol. Here, the number of observations $\mathrm{n}=10$. Since n is even, therefore

Median $=\frac{\left(\frac{\mathrm{n}}{2}\right)^{\text {th }} \text { observation }+\left(\frac{\mathrm{n}}{2}+1\right)^{\text {th }} \text { observation }}{2}$
$\Rightarrow 24=\frac{5^{\text {th }} \text { observation }+6^{\text {th }} \text { observation }}{2}$
$\Rightarrow 24=\frac{(\mathrm{x}+2)+(\mathrm{x}+4)}{2}$
$\Rightarrow 24=\frac{2 \mathrm{x}+6}{2}$
$\Rightarrow 24=x+3 \Rightarrow x=21$.
Hence, $\mathrm{x}=21$.
Ex. 50 Find the median of the following data: 19, $25,59,48,35,31,30,32,51$. If 25 is replaced by 52 , what will be the new median.

Sol. Arranging the given data in ascending order, we have $19,25,30,31,32,35,48,51,59$

Here, the number of observations $\mathrm{n}=9$ (odd)
Since the number of observations is odd. Therefore.

Median = Value of $\left(\frac{9+1}{2}\right)$ the observations
$\Rightarrow$ Median $=$ value of $5^{\text {th }}$ observation $=32$.
Hence, Median $=32$
If 25 is replaced by 52 , then the new observations arranged in ascending order are :
$19,30,31,32,35,48,51,52,59$
$\therefore$ New median $=$ Value of $5^{\text {th }}$ observation $=35$.
Ex. 51 Calculate the median for the following distribution

| Weight (in kg) | Number of students |
| :---: | :---: |
| 46 | 3 |
| 47 | 2 |
| 48 | 4 |
| 49 | 6 |
| 50 | 5 |
| 51 | 2 |
| 52 | 1 |

Sol. The cumulative frequency table is constructed as shown below :

| Weights <br> $\mathrm{x}_{\mathrm{i}}$ | Number of <br> students <br> $\mathrm{f}_{\mathrm{i}}$ | Cumulative <br> frequency |
| :---: | :---: | :---: |
| 46 | 3 | 3 |
| 47 | 2 | 5 |
| 48 | 4 | 9 |
| 49 | 6 | 15 |
| 50 | 5 | 20 |
| 51 | 2 | 22 |
| 52 | 1 | 23 |

Here, $\mathrm{n}=23$, which is odd
Median $=t_{\frac{23+1}{2}}=t_{12}=49$
(i.e. weight of the 12th student when the weights have been arranged in order)
Ex. 52 The following data have been arranged in desending orders of magnitude $75,70,68$, $x+2, x-2,50,45,40$
If the median of the data is 60 , find the value of $x$.
Sol. The number of observations are 8, the median will be the average of 4th and 5th number
$\Rightarrow$ Median $=\frac{(\mathrm{x}+2)+(\mathrm{x}-2)}{2}$
$\Rightarrow 60=\frac{2 x}{2} \Rightarrow x=60$

## MODE

Mode is also known as norm.
$\diamond$ Mode is the value which occurs most frequently in a set of observations and around which the other items of the set cluster density.
Algorithm
Step I: Obtain the set of observations.
Step II : Prepare the frequency distribution.
Step III : Obtain the value which has the maximum frequency.
StepIV: The value obtained in step III is the mode.

Ex. 53 Find the mode from the following data:
$110,120,130,120,110,140,130,120,140,120$.
Sol. Arranging the data in the form of a frequency table, we have

| Value | Tally bars | Frequency |
| :--- | :---: | :---: |
| 110 | $\\|$ | 2 |
| 120 | $\\|\\|\\|$ | 4 |
| 130 | $\\|$ | 2 |
| 140 | $\\|$ | 2 |

Since the value 120 occurs maximum number of times i.e. 4. Hence, the modal value is 120 .

Ex. 54 Compute mode for the following data
$7,7,8,8,8,9,9,10,10,10,11,11,12,13,13$
Sol. Here, both the scores 8 and 10 occurs thrice (maximum number of times). So, we apply the empirical formula.

Here,
mean $=\frac{7 \times 2+8 \times 3+9 \times 2+10 \times 3+11 \times 2+12+13 \times 2}{2+3+2+3+2+1+2}$
$=\frac{14+24+18+30+22+12+26}{15}=\frac{146}{15}=9.73$
No. of scores $=15$ (odd)
$\therefore \quad$ Median $=\mathrm{t}_{\frac{15+1}{2}}=\mathrm{t}_{8}=10$
$\therefore \quad$ Mode $=3$ median -2 mean
$=3 \times 10-2 \times 9.73=30-19.46=10.54$
Ex. 55 The following table gives the weights of 40 men. Calculate mode.

| Weights (in kg) | Number of men |
| :---: | :---: |
| 54 | 6 |
| 72 | 6 |
| 80 | 1 |
| 64 | 2 |
| 62 | 6 |
| 60 | 5 |
| 58 | 5 |
| 56 | 4 |
| 63 | 5 |

Sol. Here, each of the scores 54,72 and 62 occurs maximum number of times (six times). So we apply the empirical formula.

We construct the following table :

| Weights <br> x | No. of men <br> f | Cumulative <br> frequency | Product <br> f.x |
| :---: | :---: | :---: | :---: |
| 54 | 6 | 6 | 324 |
| 56 | 4 | 10 | 224 |
| 58 | 5 | 15 | 290 |
| 60 | 5 | 20 | 300 |
| 62 | 6 | 26 | 372 |
| 63 | 5 | 31 | 315 |
| 64 | 2 | 33 | 128 |
| 72 | 6 | 39 | 432 |
| 80 | 1 | 40 | 80 |
| Total | 40 |  | 2465 |

Mean $=\frac{\Sigma \mathrm{f} . \mathrm{x}}{\Sigma \mathrm{f}}=\frac{2465}{40}=61.625$
Here, No. of scores $=40$ (even)
Median $=\frac{\mathrm{t}_{20}+\mathrm{t}_{21}}{2}=\frac{60+62}{2}=61$
$\therefore \quad$ Mode $=3$ median -2 mean

$$
\begin{aligned}
& =3 \times 61-2 \times 61.625 \\
& =183-123.25=59.75
\end{aligned}
$$

Thus, modal weight $=59.75 \mathrm{~kg}$

## EXERCISE \# 1

## A. Very Short Answer Type Questions

Q. 1 The class marks of distribution are :
$6,10,14,18,22,26,30$
Find the class size and the class interval.
Q. 2 The class marks of distribution are : 47, 52, $57,62,67,72,77,82,87,92,97,102$.
Determine the class size, the class limits and the true class limits.
Q. 3 Find the range of the following array of data : $70,65,71,36,55,61,62,41,40,39,35$.
Q. 4 Draw the ogive of the following distribution table:

| Class interval | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ | $50-60$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| Frequency | 10 | 5 | 8 | 6 | 6 | 4 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Q. 5 The weights (in kilograms) of 25 students are given as follows :

| Weights | 35 | 36 | 37 | 38 |
| :--- | :---: | :---: | :---: | :---: |
| Frequency | - | - | - | - |

$35,38,36,37,38,35,37,36,35,38,36,36$, $37,37,35,38,36,35,36,37,37,38,36,38,37$.
Complete the following frequency table:
Q. 6 The ages of ten students of a group are given below. The ages have been recorded in years and months :
8-6, 9-0, 8-4, 9-3, 7-8, 8-11, 8-7, 9-2, 7-10, 8-8
(i) What is the lowest age?
(ii) What is the highest age?
(iii) Determine the range?
Q. 7 The marks scored by 55 students in a test are given below :

| Marks | No. of students |
| :---: | :---: |
| $0-5$ | 2 |
| $5-10$ | 6 |
| $10-15$ | 13 |
| $15-20$ | 17 |
| $20-25$ | 11 |
| $25-30$ | 4 |
| $30-35$ | 2 |

Prepare a cumulative frequency table.
Q. 8 If the heights of 5 persons are 140 cms , $150 \mathrm{cms}, 152 \mathrm{cms}, 158 \mathrm{cms}$ and 161 cms respectively, find the mean height.
Q. 9 Find the mean of all factors of 10 .
Q. 10 Find the mean of first 10 even natural numbers.
Q. 11 Following are weights (in kg ) of 10 new born babies in a hospital on a particular day :
3.4, 3.6, 4.2, 4.5, 3.9, 4.1, 3.8, 4.5, 4.4, 3.6. Find the mean $\overline{\mathrm{X}}$.
Q. 12 The number of children in 10 families of a locality are :
$2,4,3,4,2,0,3,5,1,1,5$. Find the mean number of children per family.
Q. 13 Calculate the mean for the following distribution:
$\mathrm{x}: \begin{array}{lllll}5 & 6 & 7 & 8 & 9\end{array}$
f: $4 \quad 8 \quad 14 \quad 113$
Q. 14 Find the mean of the following distribution:
$\begin{array}{llllll}\mathrm{x}: & 10 & 12 & 20 & 25 & 35 \\ \mathrm{f}: & 3 & 10 & 15 & 7 & 5\end{array}$
Q. 15 Find out the mode of the following marks obtained by 15 students in a class:
Marks : 4, 6, 5, 7, 9, 8, 10, 4, 7, 6, 5, 9, 8, 7, 7
Q. 16 Find the mode from the following data:
$125,175,225,125,225,175,325,125,375$, 225, 125
Q. 17 Find the mode for the following series:
$7.5,7.3,7.2,7.2,7.4,7.7,7.7,7.5,7.3,7.2$, 7.6, 7.2

## Find arithmetic mean in each of the

 following :Q. 18 | $\begin{array}{c}\text { Class- } \\ \text { interval }\end{array}$ | $0-6$ | $6-12$ | $12-18$ | $18-24$ | $24-30$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 7 | 5 | 10 | 12 | 6 |

Q. 19

| Class- <br> interval | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 8 | 10 | 9 | 12 | 11 |

Q. 20

| Class- <br> interval | $0-8$ | $8-16$ | $16-24$ | $24-32$ | $32-40$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 5 | 9 | 10 | 8 | 8 |

Q. 21

| Class- <br> interval | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 5 | 6 | 4 | 3 | 2 |

Q. 22 Find the mode of the following series :

| Wages (Rs.) | No. of persons |
| :---: | :---: |
| $0-25$ | 10 |
| $25-50$ | 30 |
| $50-75$ | 40 |
| $75-100$ | 25 |
| $100-125$ | 20 |
| $125-$ above | 15 |

Q. 23 Compute the mode for the following data :

| Class | Frequency |
| :---: | :---: |
| $10-20$ | 24 |
| $20-30$ | 42 |
| $30-40$ | 56 |
| $40-50$ | 66 |
| $50-60$ | 108 |
| $60-70$ | 130 |
| $70-80$ | 154 |
| $80-90$ | 140 |

## B. Short Answer Type Questions

Q. 24 A cumulative frequency distribution table is given. Convert this into a frequency distribution table.

| Marks | below 45 | below 60 | below 75 | below 90 |
| :--- | :---: | :---: | :---: | :---: |
| Number of student | 0 | 8 | 23 | 48 |

Q. 25 Draw a frequency table for the following data:

| Class | C.F. |
| :---: | :---: |
| $111-120$ | 6 |
| $121-130$ | 11 |
| $131-140$ | 16 |
| $141-150$ | 20 |
| $151-160$ | 27 |
| $161-170$ | 36 |
| $171-180$ | 42 |
| $181-190$ | 45 |
| $191-200$ | 50 |

Q. 26 Construct a c.f. table for the following data :

| Class | Frequency |
| ---: | :---: |
| $4-7$ | 3 |
| $8-11$ | 10 |
| $12-15$ | 12 |
| $16-19$ | 8 |
| $20-23$ | 5 |
| $24-27$ | 9 |

Q. 27 The heights (in cm ) of 30 students of class IX are given below :
$155,158,154,158,160,148,149,150,153$,
159, 161, 148, 157, 153, 157, 162, 159, 151,
154, 156, 152, 156, 160, 152, 147, 155, 163,
155, 157, 153
Prepare a frequency distribution table with $160-164$ as one of the class intervals
Q. 28 The water bills (in ruppees) of 32 houses in a certain street for the period 1.1.98 to 31.3.98 are given below :
$56,43,32,38,56,24,68,85,52,47,35,58$, $63,74,27,84,69,35,44,75,55,30,54,65$, $45,67,95,72,43,65,35,59$.

Tabulate the data and present the data as cumulative frequency table using 70-79 as one of the class intervals.
Q. 29 Read the bar graph shown in Fig. and answer the following questions :

(i) What is the information given by the bar graph?
(ii) How many tickets of Assam State Lottery were sold by the agent ?
(iii) Of which state, were the maximum number of tickets sold?
(iv) State whether true or false.

The maximum number of tickets sold is three times the minimum number of tickets sold.
(v) Of which state were the minimum number of tickets sold?
Q. 30 The following table gives the route length (in thousand kilometers) of the Indian Railways in some of the years :

| Year | Route length <br> (in thoursand km) |
| :---: | :---: |
| $1960-61$ | 56 |
| $1970-71$ | 60 |
| $1980-81$ | 61 |
| $1990-91$ | 74 |
| $2000-2001$ | 98 |

Represent the above data with the help of a bar graph.
Q. 31 The distribution of heights (in cm ) of 96 children is given below. Construct a histogram and a frequency polygon on the same axes.

| Height (in cm ): | No. of Children |
| :---: | :---: |
| 124 to 128 | 5 |
| 128 to 132 | 8 |
| 132 to 136 | 17 |
| 136 to 140 | 24 |
| 140 to 144 | 16 |
| 144 to 148 | 12 |
| 148 to 152 | 6 |
| 152 to 156 | 4 |
| 156 to 160 | 3 |
| 160 to 164 | 1 |

Q. 32 The mean of five numbers is 27 . If one number is excluded, their mean is 25 . Find the excluded number.
Q. 33 The mean weight per student in a group of 7 students is 55 kg . The individual weights of 6 of them (in kg) are 52, 54, 55, 53, 56 and 54. Find the weight of the seventh student.
Q. 34 The weights (in kg ) of 15 students are : 31, $35,27,29,32,43,37,41,34,28,36,44,45$,

42,30 . Find the median. If the weight 44 kg is replaced by 46 kg and 27 kg by 25 kg , find the new median.

1. Class size $=4$, Ist Class interval $=4-8$
2. Class size $=5$, Class limit for first class $=44.5,49.4$.
3. 36
4. C.f. $(10,15,23,29,35,39)$
5. $5,7,7,6$
6. (i) 7 years, 8 months (ii) 9 years, 3 months (iii) 1 year, 7 months
7. 152.2
8. 4.5
9. $x+4$
10. 4
11. 3
12. 7.025
13. 20
14. 7 marks
15. 125
16. 7.2
17. 15.75
18. 26.6
19. 21
20. 20.5
21. Rs. 60
22. 76.32
23. (i) Number of tickets of different state lotteries sold by an agent on a day.
(ii) 40
(iii) Haryana
(iv) False
(v) Rajasthan
24. 35
25. 61 kg
26. $35 \mathrm{~kg}, 35 \mathrm{~kg}$

## A. Long Answer Type Questions

Q. 1 For the following data, construct a histogram:

| C.I. | $10-14$ | $15-19$ | $20-24$ | $25-29$ | $30-34$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 300 | 980 | 800 | 580 | 290 |

Q. 2 Draw a histogram for the given data :

| C.I. | $25-29$ | $30-34$ | $35-39$ | $40-44$ | $45-49$ | $50-50$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 5 | 15 | 23 | 20 | 10 | 7 |

Q. 3 Find the unknown for the following distribution:

| C.I. | Frequency | C.F. |
| :--- | :--- | :--- |
| $10-20$ | 12 | $\mathrm{x}_{1}$ |
| $20-30$ | $\mathrm{x}_{2}$ | 25 |
| $30-40$ | 10 | $\mathrm{x}_{3}$ |
| $40-50$ | $\mathrm{x}_{4}$ | 43 |
| $50-60$ | $\mathrm{x}_{5}$ | 48 |
| $60-70$ | $\mathrm{x}_{5}$ | 48 |

Q. 4 To solve a problem, time taken by the students as follows :
$37,31,27,18,59,45,54,40,32,43,39,49,45$, $40,59,53,52,50,40,59,60,23,21,20,22$
(a) Construct a frequency distribution data using interval of 10 .
(b) Draw a histogram to represent the distribution.
Q. 5 Construct a frequency polygon for the following data :

| C.I. | $0-10$ | $10-20$ | $20-30$ | $30-40$ | $40-50$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Frequency | 85 | 40 | 45 | 25 | 5 |

Q. 6 Draw a histogram and a frequency polygon for the following data :

| C.I. | Frequency |
| :---: | :---: |
| $0-50$ | 12 |
| $51-100$ | 18 |
| $101-150$ | 27 |
| $151-200$ | 20 |
| $201-250$ | 17 |
| $251-300$ | 06 |

Q. 7 Draw a histogram and a frequency polygon from the following data :

| C.I. | Frequency |
| :---: | :---: |
| $21-25$ | 21 |
| $26-30$ | 22 |
| $31-35$ | 50 |
| $36-40$ | 110 |
| $41-45$ | 87 |
| $46-50$ | 51 |
| $51-55$ | 18 |
| $56-60$ | 23 |

Q. 8 Thirty children were asked about the number of hours they watched T.V. programmes in the previous week. The results were found as follows :

| 1 | 6 | 2 | 3 | 5 | 12 | 5 | 8 | 4 | 8 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | ---: |
| 10 | 3 | 4 | 12 | 2 | 8 | 15 | 1 | 17 | 6 |
| 3 | 2 | 8 | 5 | 9 | 6 | 8 | 7 | 14 | 12 |

(i) Make a grouped frequency distribution table for this data, taking class width 5 and one of the class intervals as 5-10.
(ii) How many children watched television for 15 or more hours a week ?
Q. 9 Read the bar graph given in fig. and answer the following questions:

(i) What is the information given by the bar graph?
(ii) What is the number of families having 6 members ?
(iii) How many members per family are there in the maximum number of families? Also tell the number of such families.
(iv) What are the number of members per family for which the number of families are equal? Also, tell the number of such families ?
Q. 10 The investment (in crores of rupees) of Life Insurance Corporation of India in different sectors are given below :

| Sectors | Investment <br> (in ten crores <br> of ruppes) |
| :--- | :---: |
| Central Government Securities | 45 |
| State Government Securities | 11 |
| Securities guaranteed by the Government | 23 |
| Private Sectors | 18 |
| Socially oriented sectors (Plan) | 46 |
| Socially oriented sectors (Non-Plan) | 11 |

Represent the above data with the help of a bar graph.
Q. 11 The following data gives the value (in crores of rupees) of the Indian export of cotton textiles for different years :

| Years | 1982 | $1983-84$ | $1984-85$ | $1985-86$ | $1986-87$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Value of Exports <br> of Cotton Textiles <br> (in crores of rupees) | 300 | 325 | 475 | 450 | 550 |

Represent the above data with the help of a bar graph. Indicate with the help of a bar graph the year in which the rate of increase in exports is maximum over the preceding year.
Q. 12 If $\bar{X}$ is the mean of the ten natural numbers $\mathrm{x}_{1}, \mathrm{x}_{2}, \mathrm{x}_{3}, \ldots ., \mathrm{x}_{10}$, show that $\left(\mathrm{x}_{1}-\overline{\mathrm{X}}\right)+\left(\mathrm{x}_{2}-\overline{\mathrm{X}}\right)+\ldots+\left(\mathrm{x}_{10}-\overline{\mathrm{X}}\right)=0$

Find arithmetic mean in each of the following :

| Class-interval | Frequency |
| :---: | :---: |
| $0-50$ | 10 |
| $50-100$ | 15 |
| $100-150$ | 30 |
| $150-200$ | 35 |
| $200-250$ | 25 |
| $250-300$ | 15 |

Q. 14

| Class-interval | Frequency |
| :---: | :---: |
| $0-50$ | 8 |
| $50-100$ | 15 |
| $100-150$ | 32 |
| $150-200$ | 26 |
| $200-250$ | 12 |
| $250-300$ | 7 |

Q. 15

| Class-interval | Frequency |
| :---: | :---: |
| $10-15$ | 5 |
| $15-20$ | 6 |
| $20-25$ | 8 |
| $25-30$ | 12 |
| $30-35$ | 6 |
| $35-40$ | 3 |

Q. 16

| Class-interval | Frequency |
| :---: | :---: |
| $18-24$ | 12 |
| $24-30$ | 16 |
| $30-36$ | 24 |
| $36-42$ | 16 |
| $42-48$ | 8 |
| $48-54$ | 4 |

Q. 17 Draw a histogram to represent the data :

| $\mathbf{x}$ | $\mathbf{f}$ |
| :---: | :---: |
| $1-2$ | 5 |
| $2-3$ | 3 |
| $3-5$ | 6 |
| $5-7$ | 12 |
| $7-10$ | 9 |
| $10-15$ | 10 |
| $15-17$ | 4 |

3. $\mathrm{x}_{1}=12 \quad \mathrm{x}_{2} 13 \quad \mathrm{x}_{3}=35 \quad \mathrm{x}_{4}=8 \quad \mathrm{x}_{5}=5$
4. (i) Number of families with different number of members in a locality.
(ii) 50
(iii) 3,120
(iv) 9 and 10, 5
5. 1986-87
6. 0
7. 161.54
8. 145
9. 24.625
10. 33.3
