

Witness: Brian Benito

Date Filed: December 22, 2025

Question:

EFSB-T-1 Refer to MS-1 at 30. For each phase of Project construction – describe the daily flow of:

- a. Construction personnel to and from the Project construction site(s), including average numbers of workers entering and exiting the site(s) and corresponding entrance and exit times.
- b. Construction equipment to and from the Project construction sites(s), including average numbers and times of truck trips.
- c. BESS component deliveries to the Project construction site(s), including numbers and times of truck trips.
- d. Numbers and times of any oversize loads that would be delivered to the Project construction site(s).

Response:

The Project has not selected an EPC contractor and therefore, responding to these questions would be speculative. A site-specific logistics plan will be developed, in collaboration with the Oakham Fire and Police Department and Department of Public Works, to minimize impacts on local traffic patterns and flow.
