## 2025 CONSUMER CONFIDENCE REPORT | PWS# OR 041-00887

This annual water quality report, required by the U.S. Environmental Protection Agency (EPA), summarizes Fairview Water District's 2025 water testing results and our ongoing commitment to providing safe, reliable drinking water.

**WHERE YOUR WATER COMES FROM:** Your drinking water originates from several groundwater wells located in Tillamook County, Oregon. A source water assessment is available for review at the District office, 403 Marolf Loop Road, Tillamook, Oregon. This report identifies the water protection area, potential sources of contamination, and the level of risk to our water supply.

**WATER TESTING AND MONITORING:** Small amounts of contaminants may naturally be present in drinking water, including bottled water. Their presence does not necessarily indicate that the water poses a health risk. Contaminants that could be present in source water include microbial contaminants (viruses and bacteria), inorganic contaminants (salts and minerals), pesticides and herbicides, organic chemical contaminants (including synthetic and volatile organic chemicals), and radioactive contaminants. We routinely monitor your drinking water in accordance with federal and state requirements to ensure that it is safe to drink. For more information about contaminants and potential health effects, call the EPA Safe Drinking Water Hotline at (800) 426-4791.

**LEAD IN DRINKING WATER:** Fairview Water District's water system met all federal lead and drinking water standards during the most recent testing period. Lead in drinking water is most commonly associated with older household plumbing materials and private service lines, not the water source itself. Because plumbing materials vary from property to property, the District cannot verify the materials used in private plumbing systems or private service lines. If present at elevated levels, lead can pose health risks, especially to pregnant women, infants, and young children. Customers concerned about lead in household plumbing may wish to have their water tested. Additional information about lead in drinking water and ways to reduce exposure is available from the EPA Safe Drinking Water Hotline at (800) 426-4791.

**SERVICE LINE INVENTORY:** In compliance with federal requirements, Fairview Water District is working to complete and maintain an inventory of all service line materials within the system, expanding to both public and private portions, where information is available. This inventory is available to the public on our website at [fairviewwater.com](http://fairviewwater.com).

**HEALTH ADVISORY:** Certain individuals may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons, including those undergoing chemotherapy, organ transplant recipients, individuals with HIV/AIDS or other immune system disorders, infants, and some elderly individuals can be particularly at risk from infections. These individuals should seek advice about drinking water from their health care providers.

**STAY INFORMED:** For more information about Fairview Water District, visit our website at [fairviewwater.com](http://fairviewwater.com), or contact the District office at [office@fairviewwater.com](mailto:office@fairviewwater.com) or (503) 842-4333. The Fairview Water District Board of Commissioners holds regular monthly board meetings on the last Thursday of each month at 5:00 PM at the District office at 403 Marolf Loop Road, Tillamook, Oregon. Meeting materials and any changes to the meeting schedule are posted on the District website. Additional drinking water testing information and water quality results are available through the Oregon Health Authority Drinking Water Data Online database at [yourwater.oregon.gov](http://yourwater.oregon.gov).

---

**ALERTS, CITATIONS AND VIOLATIONS:** Fairview Water District had no violations of drinking water standards and no required public notices in 2025.

**WATER QUALITY DATA TABLE :** The table on the next page lists all regulated contaminants detected or tested in our system. The presence of contaminants does not necessarily indicate that water poses a health risk.

INORGANIC CONTAMINANTS						
Contaminant	MCL	Result	Sample Date	Violation	Typical Source	
Arsenic	0.010 mg/L	ND	2011 - 2025	ND	Naturally occurring in some rocks or soil	
MICROBIOLOGICAL CONTAMINANTS						
Contaminant	MCL	Result	Sample Date	Violation	Typical Source	
Total Coliform	Present	ND	Jan-Dec 2025	No	Naturally present in the environment	
E.coli	Present	ND	Jan-Dec 2025	No	Human or animal fecal contamination	
NUTRIENTS						
Contaminant	MCL	Result	Sample Date	Violation	Typical Source	
Nitrate (NO3)	10 mg/L	1.39 - 3.70 mg/L	Jun-Aug 2025	No	Runoff from fertilizer use, septic systems, or natural deposits	
Nitrite (NO2)	1 mg/L	ND - 0.0627 mg/L	Jun-Aug 2025	No		
LEAD AND COPPER (TAP WATER SAMPLING)						
Contaminant	Action Level	Result	Sample Date	Violation	Typical Source	
Lead	0.015 mg/L	ND - 0.00203 mg/L	Aug 2025	No	Corrosion of household plumbing systems	
Copper	1.3 mg/L	0.00558 - 0.652 mg/L	Aug 2025	No	Corrosion of household plumbing systems	
OTHER REGULATED CONTAMINANTS						
Contaminant	MCL	Result	Sample Date	Violation	Typical Source	
Inorganic Chemicals (IOCs)	Varies	Varies	Jun 2025	No	Naturally occurring or from agricultural and urban sources	
Radiological Contaminants	Varies	Varies	Jun 2025	No	Naturally occurring	
Synthetic Organic Chemicals (SOCs)	Varies	Varies	Jun 2025	No	Agricultural and industrial activities	
Volatile Organic Compounds	Varies	Varies	Jun 2025	No	Fuel and industrial sources	

**MCL (Maximum Contaminant Level):** The highest level of a of a substance allowed in drinking water.

**Action Level:** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**mg/L (Milligrams per liter):** A measure of the concentration of a substance in water.

**ND (None Detected):** The contaminant was not found at the reporting limit of the test method.
