THE THREAT IS ACCELERATING

## Protecting your business by protecting your vendors

Organizations today rely on an expanding ecosystem of vendors, SaaS platforms, and service providers. While these partnerships accelerate innovation, they also introduce significant cyber and operational risk. **A single high-risk vendor with weak controls can become the entry point for a major breach** — and the consequences fall on you, not them.

**35.5%**  
of all data breaches in 2024 originated from third-party compromises

---

SecurityScorecard — Global Third-Party Breach Report

**2x**  
increase in breaches involving third parties — from 15% to 30% in a single year

---

Verizon Data Breach Investigations Report (DBIR)

**74%**  
of ransomware attacks now involve a third-party vector

---

Market analysis

## Five reasons to act now

### Visibility into high-risk partners

Gain a clear, prioritized view of which vendors carry the greatest cyber risk — no more blind spots in your third-party ecosystem.

### Aggregated cyber risk across your supply chain

Consolidate risk signals from across your entire vendor portfolio into a single, unified view connecting internal exposure to supply chain vulnerabilities.

### Free your team for operational priorities

Offload vendor assessments, scoring, and follow-ups to our managed service — giving your security team back the time to focus on internal operations.

### Proactive breach intelligence

Receive early-warning signals and threat intelligence that identify potential vendor breaches before they cascade into your environment.

### Third-party breach impact on your compliance posture

Understand exactly how a breach at any vendor translates to your internal compliance obligations — mapping third-party incidents to your regulatory and framework requirements in real time.

POWERED BY PARTNERSHIP

## TakTik Technologies × FortifyData

Taktik Technologies has partnered with FortifyData to deliver a comprehensive Third-Party Risk Management solution tailored for small and mid-size businesses — providing an enterprise-level view of your overall cyber risk posture by aggregating risk profiles and security scores across all vendors, suppliers, and partners.

### Unified risk score

Third-party insights feed directly into your organization's total risk score for a single, accurate picture of exposure.

### Enterprise-grade for SMBs

Full aggregation of vendor risk profiles and security scores, without the overhead of an in-house program.

### Compliance alignment

The platform maps third-party risks to your compliance requirements, keeping you aligned with regulatory standards.

### Proactive management

Vendor risk is managed continuously, not reactively, so issues are addressed before they affect your business.

*"Your vendors are an extension of your attack surface. We manage that risk, end to end."*

# Nine integrated capabilities

## 01 Setup risk management portal **CORE**

Configure your organization's risk profile from day one — establishing the parameters, risk appetite, and scoring framework that ensure all third-party risk feeds directly into your overall enterprise risk posture.

## 02 Import and classify vendors **CORE**

Ingest your entire vendor list, enrich with metadata, and assign criticality tiers — establishing the foundation for targeted risk treatment.

## 03 Automated assessments and external scans **CORE**

Deploy questionnaires, control assessments, and non-intrusive external scans across your vendor population — reducing manual effort by more than 80%.

## 04 Vendor scoring and baseline reporting **CORE**

Generate calibrated risk scores and baseline posture reports for every vendor — giving stakeholders instant, defensible snapshots of third-party exposure.

## 05 Continuous vendor monitoring **CORE**

Track changes in vendor risk posture 24/7 — including threat intelligence feeds, dark web signals, and technology footprint shifts — with automated alerting.

## 06 Remediation management and fix validation **CORE**

Track open findings through to resolution, collaborate directly with vendors on remediation plans, and independently validate that controls have been properly implemented.

## 07 Compliance and audit support **CORE**

Map vendor risk findings to your compliance frameworks — SOC 2, ISO 27001, NIST, DORA, and more — and produce audit-ready evidence packages on demand.

## 08 Program optimization through QBRs **ADVISORY**

Quarterly business reviews with your dedicated service team to analyze trends, recalibrate coverage, and align the program to your evolving business and risk priorities.

## 09 Advanced and optional services **OPTIONAL**

Extend your program with on-demand penetration testing, executive risk briefings, M&A vendor diligence sprints, and custom integration with your GRC platform.

# Your third-party risk, completely covered

Third-party risk is no longer a background concern — it is one of the fastest-growing sources of cyber exposure for businesses of every size. The Taktik Technologies TPRMS gives your organization continuous, expert-driven oversight of every vendor relationship, from initial onboarding through ongoing monitoring and remediation.

## End-to-end managed service

From portal setup to quarterly reviews — we handle the entire program so your team doesn't have to.

## Enterprise visibility for SMBs

A unified risk score incorporating every vendor — delivering insight previously only available to large enterprises.

## Proactive, not reactive

Continuous monitoring and early breach intelligence means you act before incidents occur, not after.

## Audit-ready compliance

Third-party findings mapped to your frameworks, with evidence packages ready when you need them.

## Remediation through resolution

We don't just identify risk — we track it through fix validation to ensure nothing falls through the cracks.

## Powered by FortifyData

Purpose-built third-party risk technology, delivered and managed by Taktik Technologies experts.
