

The Gendered City Index

THE GENDEREDCITY

The Gendered City Index is Gendered City's proprietary urban assessment framework designed to measure how inclusive, safe, accessible, and care-centered cities are for women and marginalized groups.

It combines spatial analysis, lived experience, participatory methods, and data-driven indicators to understand how people actually move through, use, and feel in public space. Rather than relying only on technical urban metrics, the Gendered City Index captures the social, emotional, and everyday realities that shape people's experience of the city.
