

LOXAHATCHEE RIVER PRESERVATION INITIATIVE

Preserving Florida's first federally-designated Wild and Scenic River for future generations

Working For Our River

Since its inception in 2000, the Loxahatchee River Preservation Initiative (LRPI) has guided \$45.7 million in regional watershed restoration projects within northeastern Palm Beach County and southern Martin County. LRPI, a multiagency partnership, has effectively leveraged state funds with local funds in a cost-share program which has a proven track record of delivering tangible environmental benefits aimed at preserving and protecting the resource for future generations to enjoy.

While the river, wildlife and our community benefit from the LRPI's work already completed, there is more work to be done as the Loxahatchee River remains an impaired water body. Continued investments in LRPI-supported projects will provide a measurable increase in water storage capacity as well as reductions in nutrient loading that will enable the Loxahatchee River to achieve water quality and quantity targets on an expedited timetable.

For the 2022 legislative session, LRPI ranked 9 critical projects for which \$2.27 million in state legislative funding assistance is requested. The total local match for all projects represents 56% of the total projects cost of \$5,145,031.

Rank Order	Project Name	Funding Request	Local Sponsor	Local Match Funds
1	Cypress Creek Floodplain Restoration Project	\$750,000	Martin County	\$750,000
2	Pennock Industrial Park Stormwater Improvements	\$150,000	Town of Jupiter	\$514,473
3	Loxahatchee River Mile 6 Gap Closure and Oxbow Restoration Maintenance	\$377,500	Jupiter Inlet District	\$377,500
4	Sims Creek Preserve Hydrologic and Environmental Restoration	\$100,000	Town of Jupiter	\$296,558
4	Environmental Education Facilities at the Jupiter Inlet Lighthouse Outstanding Natural Area	\$320,000	Loxahatchee River Environmental Control District	\$350,000
6	Bush Road Stormwater Improvements	\$ 94,500	Town of Jupiter	\$109,500
7	Canal C Storage Project	\$312,500	South Indian River Water Control District	\$312,500
7	Loxahatchee River Battlefield Park Culvert Replacement Project	\$125,000	Palm Beach County Parks and Recreation	\$125,000
9	Unit 3 Water Control Structure Enhancement	\$40,000	Hobe-St. Lucie Conservancy Water Control District	\$40,000
	Totals	\$2,269,500		\$2,875,531

The Loxahatchee River and its Watershed

The Loxahatchee River is the southernmost tributary of the Indian River Lagoon and includes the Northwest Fork of the river, the first federally-designated Wild and Scenic River in Florida. The river's current watershed is 260 square miles of northeastern Palm Beach County and southern Martin County.

Past changes associated with agriculture, flood control and other urban land uses have impacted this river system. In response to the need for restoration, LRPI, a multiagency partnership, formed and has made great strides in restoring the river and its surrounding watershed.

The river is meeting minimum flow levels on a more consistent basis

Natural Area Restoration

With LRPI funding, 24,000 acres of habitat within the river's watershed have been restored. Funded projects have re-established water levels closer to the conditions that existed prior to when these areas were drained and altered in the past. The enhanced storage capacity for surface water enables the river to receive freshwater during the dry season, helping it meet the state-developed "minimum flows and levels" criteria.

Enhanced habitat and public-use infrastructure supported by LRPI funds also improve opportunities for recreational activities such as paddling, hiking, cycling and fishing.

Septic-to-Sewer Conversions

Six LRPI-funded projects have converted septic systems to municipal wastewater systems and educated the public on proper septic tank maintenance. These projects have directly improved the river's water quality and have increased water supply by recycling wastewater. As a result of neighborhood septic-to-sewer conversions from 2012 through this year, about 48 million gallons of septic effluent is no longer entering the watershed.

Stormwater Outfall Retrofits

LRPI has funded 13 projects that have improved stormwater management infrastructure. These improvements took place in the urban environment and have resulted in greater treatment of stormwater prior to discharge into the river's sensitive habitats.

Though significant progress has been made, impairments in the watershed require attention

Present and Future

Over the past 20 years, significant progress has been made to improve conditions in the Loxahatchee River and its watershed. Restored natural areas allow nature to yield higher quality water down river year round. Septic-to-sewer efforts have produced substantial decreases in the amount of septic effluent that reaches the watershed, while stormwater retrofit projects in the urban estuary capture and treat run-off providing meaningful benefits.

While there are many areas of success, more work needs to be done. The Florida Department of Environmental Protection's most recent assessment of the Loxahatchee River Watershed identified areas that are impaired. LRPI's opportunity is to address these impairments through our future work.
