

FEATURED PRODUCT

Edition: September 2025

- The **HIV 1.2 Test (Whole Blood)** is designed for self-testing. It qualitatively detects antibodies to HIV type 1 and 2 in human whole blood, aiding in diagnosing HIV infection.
- The **HCV/HBsAg/HIV 1.2 Combo Test (Whole Blood/Serum/Plasma)** detects HBsAg, antibodies to HCV and HIV type 1 plus type 2 in human whole blood, serum or plasma through rapid chromatographic immunoassay.
- The **Calprotectin Semi-quantitative Test (Feces)** serves professional in vitro diagnostics. It semi-quantitatively identifies calprotectin in human feces to help diagnose inflammatory gastrointestinal disorders via rapid chromatographic immunoassay.

- ✓ **Rapid results available within 5-15 minutes**
- ✓ **High detection accuracy**
- ✓ **Convenient storage conditions (2-30°C, room temperature or refrigerated)**
- ✓ **No cross-reactivity with common interfering substances**

PRODUCT INFORMATION

HIV 1.2 Test

Cat. No. : BSP02ST-HIV
Specimen: Whole Blood
Sensitivity: >99.9%
Specificity: 99.7%

HCV/HBsAg/HIV 1.2 Combo Test

Cat. No. : BSP02-CBH
Specimen: Whole Blood/Serum/Plasma
Sensitivity: >99.9%
Specificity: 99.7%

Calprotectin Semi-quantitative Test

Cat. No. : F02A-CAL
Specimen: Feces
Cut-Off: 50-200 µg/g
