

INDEPENDENCE

What is in the name INDEPENDENCE? It represents FREEDOM, LIBERATION and SUSTAINABILITY. These are the very principles behind the launch of Electric Vehicles Unlimited game changing FREEDOM CARRIAGE, called the INDEPENDENCE.

"There is no equivalent vehicle in the marketplace" states EVU founder Michael Clevenger, Vietnam Vet and DAV. The "INDY" is not simply an asset, but a life sustainability catalyst. EVU captures the essence of a lifestyle changing FREEDOM transportation asset, uniquely designed ergonomics and groundbreaking safety enhancements.

The Independence conforms to all of the DOT and NHSTA safety specifications pertaining to Neighborhood Electric Vehicles (NEVs). Head lights, tail lights, signal lights, brake lights, a horn, a DOT approved safety glass windshield, windshield wipers and safety belts, are included in the extensive list of standard equipment.

Patent pending technology includes: side impact protection, vehicle speeds programmed for a specific market or user, and the Independence rear entry method of boarding and exiting. There are no ramps. Interested? The design enhancements are leading edge and designed to meet the exact needs of its user.

"I have been involved with automotive technology, focused on the adaptability of previously unmet needs for persons of physical impairment for over twenty years, and this project checks all the boxes" says PJ Abbott, former Marine Officer, former IndyCar/NASCAR driver, and himself a military classified DAV.
