

Research Study: Survey and Interview on Disability and Reproductive Health during COVID-19 in Canada

Who?

You may be eligible if you:

- Identify or may be identified as having a disability*
- Identify as a woman, trans, or non-binary person
- Are 18 years or older
- Live and receive health care in Canada

What?

- You have the option of completing a **20-minute survey** and/or a **1-hour interview** about your reproductive health and related health care services you received since the beginning of the COVID-19 pandemic.
- You can do the study, or not do the study. The choice you make will not impact the services you use now or later.

How?

- The survey can be done by you online, by telephone or Zoom with a researcher at a time that works for you.
- The interview can also be done by telephone or Zoom.
- You are welcome to do both the survey and the interview.
- If you need any supports or accommodations to participate, please let us know.

What you share about your reproductive health experiences during COVID-19 will help make services better for other people during and beyond the pandemic.

You will receive a **\$15 gift card** for the survey and a **\$40 gift card** for the interview.

In this study, “**reproductive health**” includes any experiences related to gender and sexuality for women, trans, and non-binary people across the life course. For example, menstrual health, gynecological health, contraception, abortion, sexually transmitted infections, cervical and breast cancer screenings, menopause, gender-based violence, fertility and pregnancy-related health, health of young children, and trans health. ***“Disability”** comprises a range of disabilities, including those who self-identify as disabled and/or d/Deaf. This definition is inclusive of those who have yet to receive an official diagnosis. We have chosen to be as inclusive as possible, consistent with our commitment to include those with disabilities who remain invisible and uncounted.

This study has been reviewed and approved by the University of Toronto Research Ethics Board #42194.
