

ConcreteDirect Release Notes

Version 1.56 Expected February 26, 2020

Customer App

New Mobile Features:

- **Customers can filter on their order and archive screens by who placed the orders.**
(Android only, iOS coming soon)
- **Maps now have full color** to more effectively communicate landscape details and traffic conditions.
- **“Pin drop” shows lat/long values** - When selecting a location for an order to be delivered to, lat/long coordinates will be displayed if the pin drop tool is used.

New WebApp Features:

- **Bulk ordering now accommodates multiple mixes and additives** - Customers will now be able to draft and request multiple orders with multiple mixes to be submitted all at once from the customer web app.
- **LH brands displayed on login page**

Driver App

New Features:

- **“Customer not available” reduced by 1 “button tap”** - Drivers can now enter a “No signature” record before entering water records.
- **Drivers now have an hour grace period** - When driver’s return to the plant, they have an hour before their delivered tickets are finalized and “locked”.
- **Driver app displaying “Cumulative total / Total ordered”** - The driver app and the sharable PDF now display the truck’s cumulative quantity and total quantity ordered.

Improvements:

- **Long tap on map to calculate new route** - Drivers can now select any location on the map and route to that location with a “long tap” gesture.

Dispatcher App

New Features:

- **Full color maps** - Dispatchers will now be shown greater detail and colors within the map feature.
- **Customer messages sorted by “first come, first served” order** - As customer message come in, they will be added to the bottom of the message queue.
- **Dispatchers can grant or restrict driver access** to maps and Push to talk features from account settings.
- **Display of search feature** - To improve the discoverability of the order filter it has been permanently displayed.
