

# ConcreteDirect Release notes

Version 1.80 Expected February 16, 2021

## New Features

### Customer Mobile App:

- The “Pouring” state of each truck will now be visible in the Order Details screen, along with “Ticketed”, “Delivering”, etc.

### Driver App:

- The Zello PTT channels that are “Dispatch” type cannot be turned off by drivers. To reflect that, the On/Off buttons for those channels have been removed from the driver interface.
- The contact or channel that a driver is connected to will now be highlighted in grey to reinforce who will hear the driver if they use the PTT feature.

### Dispatch App:

- The Order Requests and Customer Chat queues can now be filtered by customer, job-site, etc. as well as sorted by when they were received or when they are scheduled for.
