

# ConcreteDirect Release notes

Version 1.75 Expected November 18, 2020

## New Features: Driver App

**Customizable FLRA Items:** Drivers can now specify custom FLRA hazards. These hazards are driver generated and order specific. They will populate the ticket exports and be documented in the dispatcher app just like the default FLRA options.

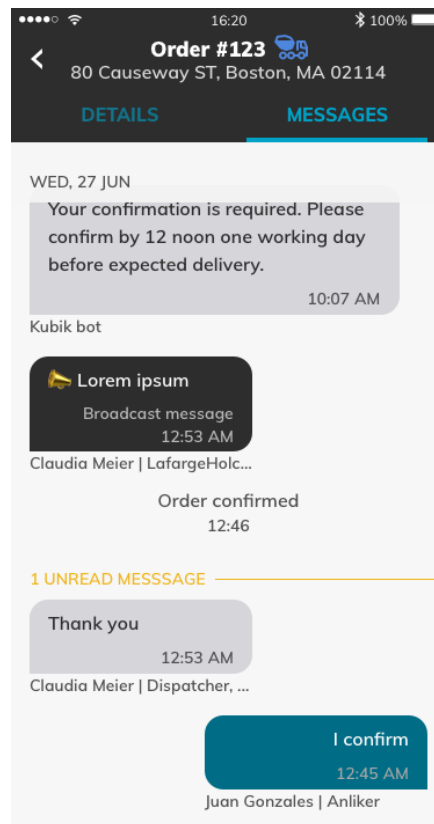

**Driver navigation:** When driving and using the CD navigation, the view of the map will zoom in and out depending on the speed of the truck and how close it is to its next turn.

# New Features: Customer Mobile App

**Broadcast messages:** Messages sent via “Broadcast” will be black in color and accompanied by a megaphone emoji.

**The “Elements to pour” field will now default to “Other”**

Type your message here...

**Canceled Orders:** Canceled order tiles will now be collapsed. Tapping on the tiles expands them, revealing their details and allows further interaction.

## New Features: Dispatcher App

**Custom Order Form Fields:** Customers that require a specific field to be added to their orders and XLSX exports can now be accommodated using the “Custom Order Form Fields”.

In the Jobsite Administration, up to 8 customizable fields can be added to the customer’s order form. These fields can be marked as mandatory if necessary. Any values entered in these fields will be included in the XLSX exports generated by either dispatchers or customers.
