Completing the FLRA

Field level risk assessments are now documented and stored in ConcreteDirect.

In addition to being instantly added to the PDF E-tickets for documentation, other drivers on the order will see if there have been any risks reported before they arrive.

FLRA's will be visible to dispatch app users.

Paperless

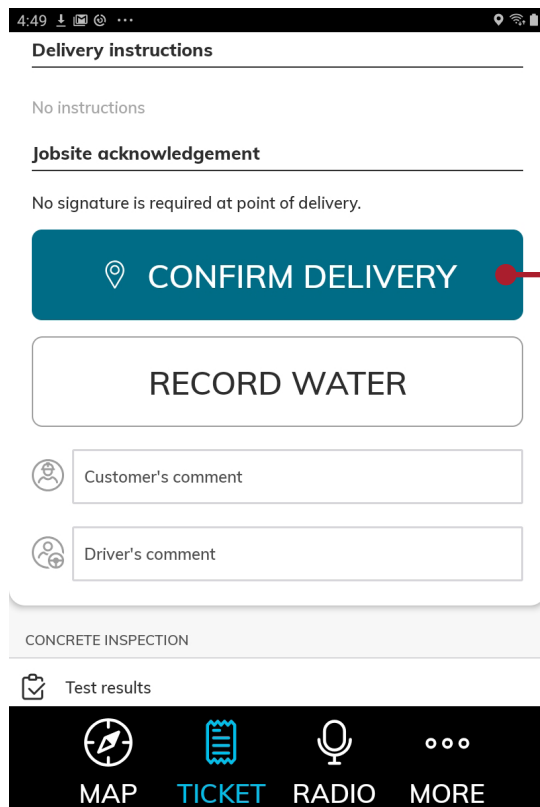

Jobsites and orders can now be paperless.

When an order is “Paperless” in ConcreteDirect it’s delivery tickets will automatically not print from the batch panel.

If drivers see the green leaf icon at the top of their tickets, they can be sure that they do not need to get a paper ticket when loading.

Whether or not an order is paperless is controlled within the CD Dispatch App.

Confirm Delivery

Confirm Delivery

To avoid confusion, the “Delivered” button has now been re-labeled to “Confrim Delivery”.
