PHOENIX

EQUIPMENT COMPANY

WHY PHOENIX

- 1 Quality** - *We build both catalyst and resin pumps from 304 Stainless for long wear they are not just plated steel. Every system is designed and assembled here in our facility, which means that replacement parts are made in house on our own CNC machines. It also means that replacement parts are readily available for same day ship. So less down time for you.*
We sell less parts than any other manufacturer and when you do need a part ours are less expensive.
- 2 Customer Service** - *We have been manufacturing systems since 1998. We are a family owned business who work hard to provide our customers with the best service and you can speak directly to the man who designs the systems, Scott McGehee.*
He is available 7 days a week if you need him.
- 3 Breakdown Simplicity** - *We were the first to use pull pins for ease of dismantling the resin pump. Our standard 5000 gun is being used by manufacturers worldwide. It is easily rebuildable and can be used for RTM, Wetout, Chop or Gelcoat with the change of the front cap and tip.*
No need for several different guns.
