

CAAP

Green Technologies

CLEAN AIR ASSISTANCE PROGRAM

Cleaning up the environment one engine at a time.

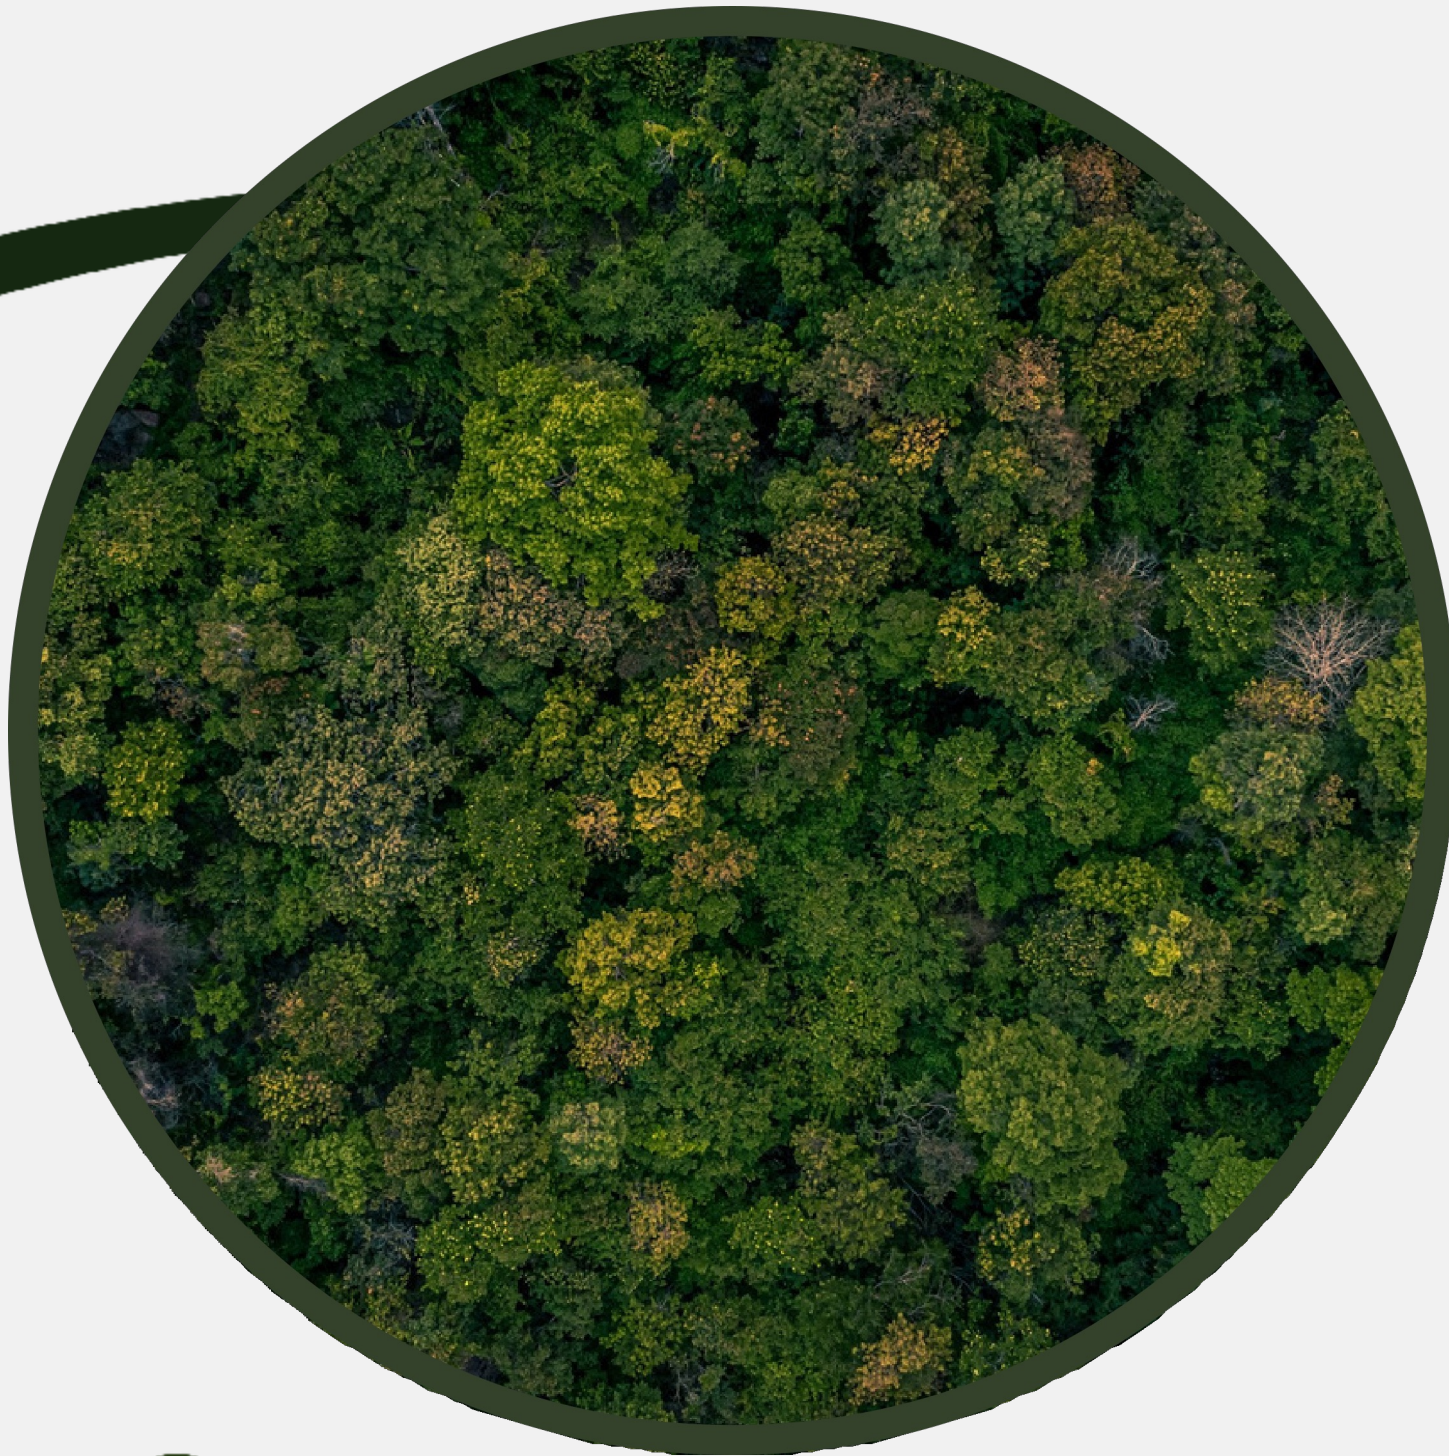

PRESENTATION - 2025

WHAT IS CAAP?

<https://www.youtube.com/watch?v=ISlvWbc4YiU>

- ❖ A green hydrogen technology that cleans up carbon emissions
- ❖ A unique and profitable business opportunity
- ❖ A humanitarian program that converts earned carbon credits to helps underprivileged kids
- ❖ A summary of our objectives

A GREEN TECHNOLOGY

CAAP has a Unique Hydrogen Assist Unit that takes water, separates the hydrogen from the water adds it to the air intake of an engine. This saves about 20 to 25% on the engines fuel usage and results in reducing 80% carbon emissions from the exhaust. This is due to the fact that hydrogen burns hotter and cleaner than diesel fuel.

A UNIQUE & PROFITABLE BUSINESS OPPORTUNITY

CAAP offers these units at no charge to several Diesel Generator Power Stations (genset farms) supplying electricity for communities in South and Central America. Initially we are targeting several gensets farms in Mexico, Ecuador, Peru, Brazil and Chile.

Our arrangement with the owners will be to supply and install these units at no cost to the owner but CAAP will keep 50% of the fuel savings and all the carbon credits.

Some of these genset farms have up to 200 diesel engines with each engine using about \$200,000 of fuel per month. These engines usually operate 24/7 supplying power to the country's power grids. Our CAAP units will save the genset farm owner about \$20,00 per engine per months about (\$20k * 200 engines) or \$4,000,000 per month. Our company CAAP will make an equal amount and this will be split 50/50 with our investor partners.

A HUMANITARIN PROJECT

Additionally, as CAAP retains ownership of all it's hydrogen units, it keeps all the carbon credits generated from these units, which will be sold every four months.

This, in itself will be very profitable and it's the company's intention to donate a percentage of these carbon credits to accredited Children Programs, such as the "Make a Wish Foundation".

SOCIAL

HUMANITARIAN

GREEN AND PROFITABLE

SUMMARY OF OUR OBJECTIVES

In summary, CAAP is an environment friendly company cleaning up existing air pollution problem, saving our clients money and helping under privileged children, while our investor partners enjoy substantial financial dividends.

Our group has invested over \$1.5M into this proven technology but our goal is to introduce our program to as many genset farms ASAP. Cleaning up the environment one engine at a time.
