Industry Best Information Security

Your Data, Handled & Maintained With The Highest Security Measures

The security of your data is our top priority, and our platform was built with the highest levels of security in mind. Get the best quality training data with the assurance that it is secure.

Data Annotation

Your data, annotated and validated to train the best models.

Transcription

Turn audio and video content into the highest quality text.

Translation

Get the best quality speech and text data translated into multiple languages.

AI Datasets

Build models with our speech data collection services.

TRANSCRIPTION

প্রতিলিপিকরণ

- 15 to 20 USD per hour
- Upload audio & video files from your device, web link, or cloud storage securely and with ease, and our crowd of professional transcriptionists take care of the rest.
- Source: <https://www.transcribeme.com/>

SHOPIFY APP/THEMES

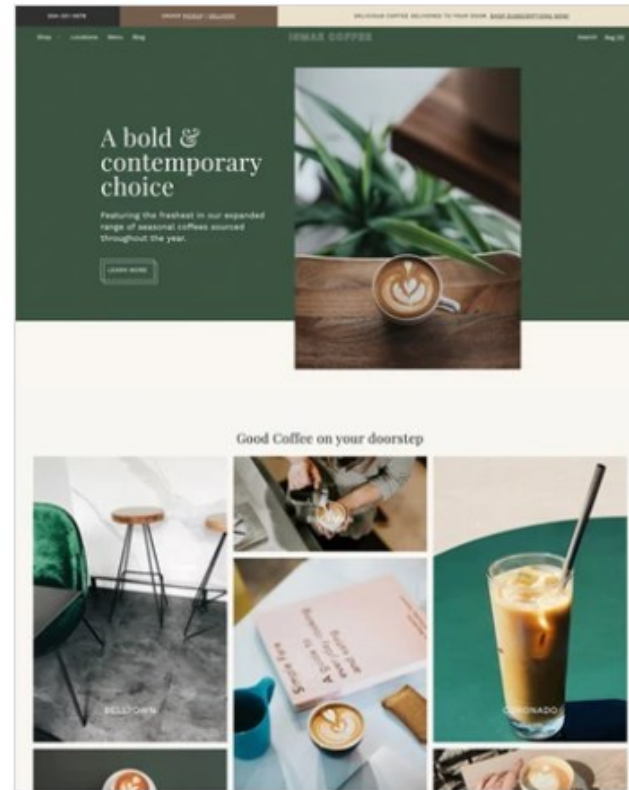

অ্যাপ/থিম

Shopify Themes are the templates our merchants use on their ecommerce stores. Every month thousands of business owners download these templates — many of which are created by our partner community. You can rely on our blog for frequent posts about how to design themes and get them listed in the Shopify Theme Store.

WORDPRESS PLUGINS/THEMES

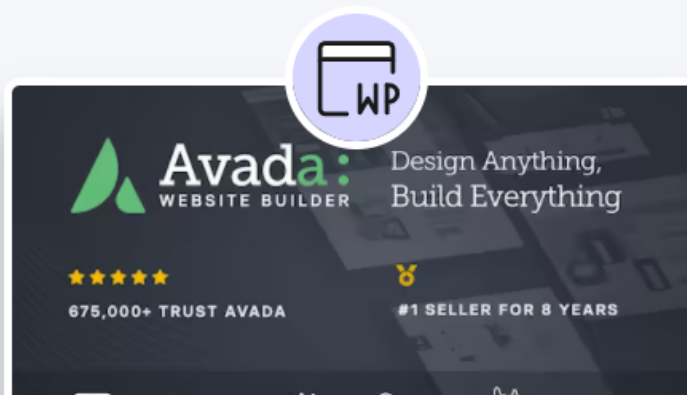

ওয়ার্ডপ্রেস প্লাগইন/থিম

- For non-developers, WordPress is still one of the main go-to for blogging. Theme development is one of those things that's been around for so long that you might find it hard to compete and make any actual money.
- While themes alter your website's design, plugins are meant to add new features and functionalities. In simpler terms, themes affect what your site looks like, and plugins affect what it can do.

ETHICAL HACKING

Bug Bounty Platforms

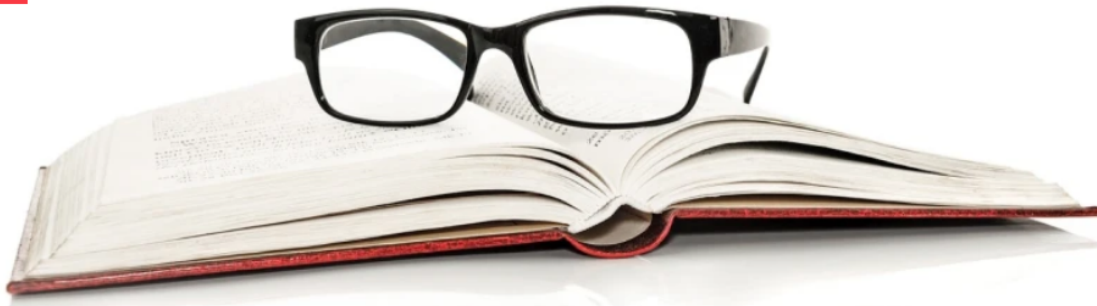

- The first place you can begin working as a freelance hacker are established bug bounty programs.
- Bug bounties are programs where companies give you permission to hack into their systems and report on what security vulnerabilities that you find.
- Some platforms help companies create and monitor these programs, some notable examples include **bugcrowd** and **Hackerone**.
- If you join these platforms as a security researcher you will have access to several different bug bounty programs, both paid and unpaid.
- The advantage of going through one of these platforms is you don't have to spend time finding potential clients, you can just start hacking.
- The downside is the level of competition can be high, there are many security researchers on these platforms so it can be hard to find a useful security bug before anyone else can report it.

- This one is more active side income than passive income. Personally, I haven't 'hacked' anything yet. But over the past year, I've been doing a lot of security-related work and find that organizations are more vulnerable than we actually want to believe.
- **Bug bounty hunter:** Bug bounty hunters are individuals who know the nuts and bolts of cybersecurity and are well versed in finding flaws and vulnerabilities. ... Bug bounty programs allow hackers to detect and fix bugs before the public hears about them, in order to prevent incidents of widespread abuse.
