Subject: RE: CO - testiranje

Ne morate odmah da forsirate 22" ...
Hajde da utvrdimo da system elementarno radi end-to-end ...
pa cemo posle da gledamo da radimo ove malo teze stvari ...

You don't have to be 22" right now.
Let's find that the system elementary works end-to-end ...
We'll see if we can do these things...

Subject: RE: CO - testiranje

Pokusavamo da nadjemo projekte za CO kako bi shvatili koliko ballota imaju i kako bi mogli da kreiramo iste samo sa PNG-iovim za Full Ballot.
Ja sam skinuo neki Mock project 2017 za Denver koji sam nasao.
Sad skidam 2016 General za Denver, sto ce potrajati malo.

Onda cemo ubaciti 22" ballote, umesto QR png pa cemo videte koliki su el fajlovi i dal mozemo da ih ucitamo na Samsung / Classic / Prime.
Sto se tice verzije mi smo radili sve u trunk, al cemo sad da vidimo da backportujemo feature u 5.11 koji je koriscen u CO prosle godine.

Subject: Re: CO - testiranje

We're trying to find projects for CO so they can figure out how many ballots they have and how they can We only create the same with PNG's for Full Ballot. I downloaded some Mock project 2017 for Denver that I found.
Now I'm downloading the 2016 General for Denver, which is going to take a while.
Then we'll insert 22" ballots instead of QR png and we'll see how big the el files are and if we can make them
Download on Samsung/ Classic/ Prime.
As for the version we did everything in trunk, but now we will see that we are backporting the feature in 5.11

Evo sta ja znam:

Here's what I know:

- Papir ide do 22 inch i to je nesto sto mozemo da uradimo na Oki stampacima koji idu u ovoj konfiguraciji sa ICX
- Koristi se regularni papir za ballote znaci isti kao za papirne ballote
- Pretpostavljam da je Denver najveći od svih customers u CO
- Samo jedan County u CO koristi ICX Classic a svi ostali koriste ICX Samsung - Problem s tim je sto Samsung moze da se update samo na Android 5.1 a ostali ne
- Regular ballote paper is used with the same signs as for paper ballots
- Denver is the largest of all customers in CO.
- Only one County in CO uses ICX Classic and all others use ICX Samsung - Problems team is table
- Samsung is only updating to Android 5.1 and others to 8.1 which is important for other reasons such as
- I am security. Samsung also has 3GB of memory and ICX `

Subject: CO - testiranje

Hey Mayo & Maticu,

Hajde da probamo da provucemo ceo test (sto bi srpski rekli end-to-end), ~~za Colorado~~ projektom, i full face ballot (ili kako ga vi vec tazno zovete) - glasanjem (markiranje voting boxeva).

Molim vas dopiste ispod sta znate, takodje dodajte sta god mislite da je relevantno za ovaj test.

Evo moje liste pitanja, zahteva, nedoumica - naravno nije pod moranje da sve ogovorite/obezbedite, slobodno dopiste vase misljenje:

Election definition:

- Kog najveceg customera u CO mi hocemo da upgradujemo?
- Da li imamo election project od prethodnih izbora (General/primary election 2016, ili 2018)?
- Koja je verzija tu koriscena?

Software version:

- Koju verziju EMS-a da koristimo?
- Koju verziju ICXa vi forsirate?

Let's try to run the whole test (as serbian would say end-to-end) for the colorado project, and full face ballot (or as you would like to call it) - by voting (marking voting boxes) projektom, i full face ballot (or as you would like to call it) - by voting (markiranje voting boxeva). Please write below what you're looking for, and add whatever you think is relevant to this test.

Here's my list of questions, requests, doubts, of course you don't have to answer everything, feel free to send your opinion.

What version is used here?

Which version of EMS should we use?
 Which version of ICX are you forcing?

My humble opinoin is that they do not want to change any hardware, but on existing tablets to do an upgrade, so whatever that mean for you (or am i wrong?)

Hardware:

- ICX - Moje skromno misljenje je da oni zele da ne menjaju nikakav hardver, vec na postojecim tabletima da urade upgrade, pa sta god to za vas znacilo (ili gresim)?
- Printer – koji printer se koristi, i koja je max velicina papira koja unutra staje?
- Papir – koji se koristi za printanje, onaj deblji kao za regularne ballote, ili obicni

Why it's all about the above:

- The project of the previous elections will give us an idea of the size: the number of ballotes, also the size every balloon and the way in which the tongues were

Zasto je sve oo gore bitno:

- Projekat od prethdnih izbora ce nam dati neka ideja o velicini, broju ballota, kako da se koristi svakog ballota i nacina na koji su korisceni jezici. Na primer:

- o mozemo imati bilingual papir ballot, i kako je to handlovano sa stanje glasam na spanskom jeziku, a printam englesko/spanski papirni ballot
- o 2 card ballot – glasam na ICXu I printam 2 card ballot ...
- o Velicina ballota (papira) – mislim da preko 14" ne mozemo da idemo

- Printer I debljina papira: ja mislim da printanje na obicnom (tankom papiru) markerima, nije nikako preporuceno ...
- Kad se otprinta na (vec kom printeru) – da I je to posle dobro za skeniranje

About we can have bilingual paper ballot, and how it is hand-painted with icx fit, for example:

I'm in Spanish and I'm writing english/spanish paper ballot.
o 2 card ballot - I vote on ICX
And print 2 card ballot ...
The size of the ballot - I don't think we can go over 14" ...

Naravno, komentari su vise nego dobrodosli.

Of course, comments are more than welcome.

- Printer and paper thickness: I think printing on plain (thin paper) naish ballota with
- The markers are not recommended...
- When it is printed on the printer - yes and then it is good for scanning ...

Why it all matters:

- * A pre-selection echo will give us an idea of the size: the number of ballots , also the size of each balloon an the way language were used, like what:
- *We can have a bilingual paper ballot, and how it is handed from the ICX fit, for example: I vote in Spanish and print English/Spanish paper ballot
- *2 card ballot- I vote on ICX and print 2 card ballot.... ballot size- I don't think we can go over 14"... (because of the printer
- *Printer and thinker paper: I think printing on ordinary (thin paper) naish ballot with marker, is not recommended at all.
- *when it is printed on (already a printer)- yes
And it is good for scanning afterwards
