Subject: System Patching - Need your assistance
Importance: High

All, you may have heard the news regarding a few critical vulnerabilities that were published this past Tuesday from Microsoft. CISA, which is a Cybersecurity arm within the US Department of Homeland Security coordinated a call with all Critical Infrastructure partners to discuss the vulnerabilities. CISA issued an Emergency Directive to patch all Federal Government systems within 10 days and are advising all Critical Infrastructure partners to do the same.

We are working to patch all our user and infrastructure systems as quickly as possible. We also need your help as there may be virtual machines that you or your teams have setup that we do not have access to patch on our own. Can you please inventory your systems and apply the latest Operating System patches from Microsoft? We have a deadline of next Thursday as it is estimated that capable bad actors will have figured out how to exploit the vulnerabilities by the end of next week.

If you cannot patch vulnerable systems, our direction is to power them off. We can assist you if you run into any problems or have questions.

Thanks in advance for any help you can offer. Please forward to anyone that may be affected within your teams.

[CryptoAPI Spoofing vulnerability – CVE-2020-0601](#)
