ATTN.: Mr. ABDOUMALIK ABDOULLADJANOV/CEO&CHAIRMAN

Subject: Expression of Interest for cooperation in the EPCF project.

Dear Sir / Madam,

Economic Society (E.S.) Hil Gurlushyk in partnership with Aron Construction DMCC has been active in the field of construction and in implementation of large scale industrial projects. We specialize in integrated projects and have substantial expertise and recognized experience in the field.

We successfully operate in the oil and gas industry and have cooperated with the oil-producing Company – Dragon Oil Turkmenistan Limited on the Caspian offshore block for seven years. We are proud of the fact that we have no Lost Time Injuries and Zero Incidents in history of our work.

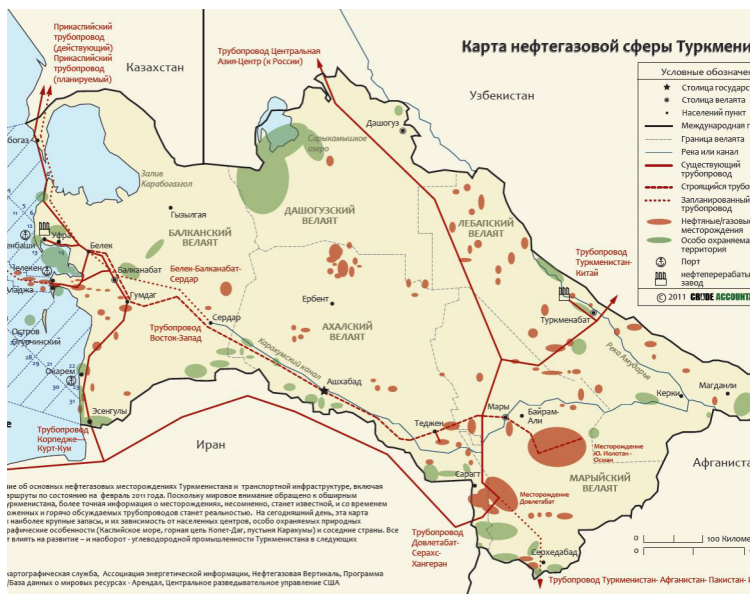

Our projects continuously meet all local and international standards in construction. We have been actively working on becoming a preferred international contractor. The most important aspect of our work is HSE. All management levels work hard to protect human life and the general well-being of our staff.

We are currently looking for opportunities to diversify and expand our business and having examined presentation provided to us by the Head of Process Department – Mrs. Zahra Al-Hammadi. With this letter we wish to express our interest in taking part in the EPCF (Engineering Procurement Construction and Financing) project announced by the Ministry of Oil of Iraq.

Personnel of E.S. Hil Gurlushyk are qualified professionals in their field. Most of them have previously engaged in the implementation of the largest projects in the country, such as the “East-West” project.

The "East-West" gas pipeline is a Turkmen project for the development of gas transportation infrastructure in Turkmenistan, the implementation of which began in 2010. The pipeline was put into operation in 2015. The pipeline combines the main gas fields of Turkmenistan, located in the east of the country, with the western regions and the Caspian Sea and has created a closed gas transmission system in Turkmenistan. The pipeline allows for the transit of significant volumes of gas both east and west.

The capacity of the gas pipeline is 30 billion cubic meters per year, the length is 733 km. The diameter of the gas pipes is 1420 millimeters. The gas pipeline originates at the Shatlyk gas compressor station in the Mary region of Turkmenistan and crosses the territory of Mary and Akhal regions to the west. It then leads to the Belek gas compressor station in the Balkan region.

E.S. Hil Gurlushyk in collaboration with Aron Construction DMCC, has all the resources to work on a gas and oil pipeline project in Iraq. We will be glad to offer you the best proposal for the implementation of the project in a timely fashion.

We would be glad to meet with representatives of your organization to negotiate the terms of our prospective partnership. Please do not hesitate to contact us if you have any further inquiries.

Sincerely yours,

Toyli Ataniyazov
Director
