

WATER: PROTECTING THE FLOW

Protecting water is an important role of Florida Ranches. Ranches need water to grow the grass and keep cows healthy, but they also provide recharge areas for water to return to the water cycle.

PART 1:

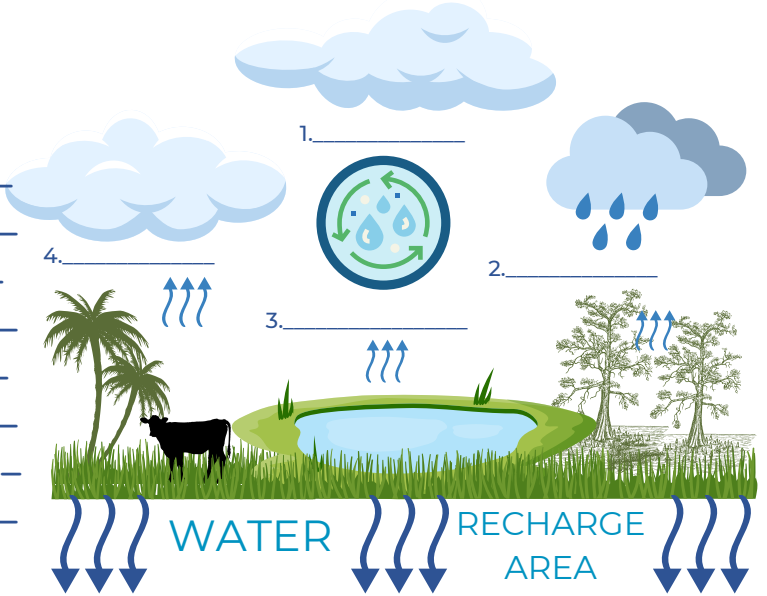

Define the words below and use them to fill in each stage of the water cycle.

Condensation: _____

Precipitation: _____

Transpiration: _____

Evaporation: _____

PART 2:

Everyone has a role to play in protecting our watershed and conserving water. Ranchers are doing their part. Are you doing yours? Ranches follow best management practices to conserve and protect for people and animals. What are some ways your family can conserve and protect water? _____

GET WATER WISE!

Visit www.watercalculator.org with your parents to help your family calculate your average monthly water usage and create a family plan for saving water!

Work with a classmate or team to create a poster that shows the ways you can conserve and protect water!
