

STRETCH MARK & SCAR CAMO AFTERCARE

NORMAL EVOLUTION OF THE PROCEDURE:

- REDNESS WITH EDEMA, THERE MAY BE AN APPEARANCE OF SOME SPECKS OF BLOOD.
- BURNING AND ITCHING, IN THE EARLY DAYS. DO NOT SCRATCH THE AREA.
- WHEN THE EDEMA IS GONE, REDNESS MIGHT LAST UP TO 20-40 DAYS.
- WHEN ALL REDNESS HAS CLEARED THE TATTOO MIGHT BECOME DARKER THAN THE COLOR OF THE SKIN, IT IS PART OF THE HEALING PROCESS OF THE BODY BECAUSE THE INK COMES IN CONTACT WITH THE BLOOD CAUSING A CHEMICAL REACTION TO IT WHICH CAUSES THIS DARK COLOR. WE ALWAYS TATTOO YOUR STRETCH MARKS OR SCAR A SHADE LIGHTER THEN YOUR SKIN SO THERE WILL BE NO STAINING OF COLOR DURING THE PROCEDURE.
- THE FINAL RESULT MAY OCCUR BETWEEN 60-120 DAYS, WE WILL ASSESS THE NEED OF ANOTHER SESSION AFTER 60 DAYS. IN SOME CASES IT CAN TAKE LONGER TO HEAL, DON'T PANIC. THE LONGEST WE'VE SEEN IS 120 DAYS. IF YOU ARE A VEGAN OR HAVE AN AUTOIMMUNE DISORDER, THE HEALING PROCESS MAY TAKE LONGER.
- OF COURSE IN THE FIRST 7 DAYS, ANY EXCESS INK THAT WAS IN PHAGOCYTE WILL BE ELIMINATED IN THE FORM OF A CRUST (SET OF INFLAMMATORY CELLS, RED BLOOD CELLS, PLASMA AND FIBRIN MIXED WITH EPITHELIAL RESIDUES ON THE EPIDERMAL SURFACE) LEADING TO A CLEARING OF 50% OF PIGMENTATION, OFTEN OCCURRING A NEED FOR A TOUCH UP AFTER THE FIRST APPLICATION.
- PLEASE SEND BE BROWED ETCETERA A PICTURE EVERY WEEK SO WE CAN ASSIST YOU ON YOUR HEALING PROCESS AND SUPPLY YOU WITH THE BEST PLAN OF ACTION. REMEMBER THIS PROCEDURE CAN TAKE 1-4 SESSIONS FOR SUCCESSFUL RESULTS.

STRETCH MARK & SCAR CAMO AFTERCARE

IT IS VERY IMPORTANT TO FOLLOW THE POST-PROCEDURE CARE OF CAMOUFLAGING SO THAT PROPER HEALING OCCURS. CAMOUFLAGE IS A TATTOO, SO DURING THE RECOVERY PROCESS IT REQUIRES SPECIAL CARE TO ENCOURAGE HEALING.

1. PROPER HYGIENE. FREQUENT CLEANING PREVENTS INFECTIONS AND IT IS IMPORTANT TO USE ANTISEPTIC SOAP TO CLEAN THE AREA BEFORE APPLYING AQUAPHOR IN ORDER TO REMOVE THE PRODUCT USED ON PREVIOUS OCCASIONS.
 1. A SHOWER CAN BE TAKEN 3 HOURS AFTER THE PROCEDURE AND SHOULD BE MAINTAINED WHILE THE SKIN FORMS A SCAB AND THE RESEMBLANCE OF A WOUND. THIS CLEANSING CAN BE DONE DURING THE SHOWER. DO NOT RUB THE AREA OR USE ANY SCENTED SOAPS TO CLEAN THE AREA, THIS WILL HELP PREVENT ANY SERIOUS REACTIONS OR ALLERGIES AND ASSIST WITH THE HEALING PROCESS.
2. CORRECT USE OF THE OINTMENT. THE USE OF THE OINTMENT IS DONE IMMEDIATELY AFTER THE PROCEDURE, WHICH MUST CONTINUE DURING HOME CARE. AQUAPHOR IS THE MOST INDICATED OINTMENT BECAUSE IT HELPS WITH THE HEALING PROCESS. ON THE FIRST WEEK, THE IDEAL TREATMENT IS TO APPLY THE AQUAPHOR TWICE A DAY, MORNING AND NIGHT. ITS USE MUST CONTINUE DURING THE FIRST 14 DAYS.
3. DO NOT REMOVE THE SCAB AT ALL TIMES. IN THE FIRST 7-14 DAYS, THERE MIGHT BE A THIN SCAB, DO NOT TOUCH IT. IT MIGHT FALL ON IT'S OWN, AND IT'S FUNCTION IS TO PROTECT AGAINST SKIN INFECTIONS. THIS CRUST (SET OF INFLAMMATORY CELLS, RED BLOOD CELLS, PLASMA AND FIBRIN MIXED WITH EPITHELIAL WASTES) IS THE INK IN EXCESS, WHICH DID NOT GO THROUGH PHAGOCYTE.
4. DO NOT SCRATCH THE AREA OF THE TATTOO. IT IS NORMAL TO WANT TO SCRATCH THE AREA OF THE CAMOUFLAGED AREA. INSTEAD OF SCRATCHING, GIVE LIGHT PATS ON THE AREA, IT RELIEVES WITHOUT IMPAIRING HEALING (YOU CAN USE A BABY WIPE TO HELP).
5. HOWEVER, IF THE ITCHING IS VERY STRONG, THE IDEAL IS TO SEEK DERMATOLOGIST, BECAUSE IT MAY BE AN ALLERGIC REACTION TO THE INK.
