## 2021 JUNIOR STOCK ROD CLASS (JSRT) TAR\*

## Introduction:

The Junior Stock Rod class is an entry level class for standard sedans or coupe, 2 or 4 door body cars and LDVs which appeared with a 1600 engine or less. Front or rear wheel drive vehicles are permitted. All spare parts fitted to the car shall be used without any alterations and modifications as they come from a road going vehicle. Cars to be used must be in standard form using 8 valve piston engines and gearboxes from the same manufacturer.

The main objective of this class is to promote Oval racing in the most cost efficient way by means of using stock standard saloon cars with minimum alterations.

Minimum age – Competitor must turn 10 in the respective Year in which he/she enters this Class and must leave this class at the end of the Year that they turn 16. Competitors promoted prematurely to the Stock Rod class MAY NOT return to this class. This is a Club Championship Class only.

Only modifications specifically stated shall be allowed, anything not stated in these rules are not permitted.

WOMZA is aware that many of the vehicles in this class are of an age where it is not always possible to find spares within the regulations.

In such instances competitors must submit a Written Application of Dispensation (WAP) to WOMZA. WOMZA will review this request and will provide approval in writing should the dispensation be approved. Each instance will be judged on merit.

The onus is on the Competitor to place this Dispensation approval in his license book and to present it when questioned. WOMZA reserves the sole right to make these decisions and Competitors who do <u>not present</u> a written Letter of Dispensation will be competing in a car that contravenes regulations.

JSRT 1.	<u>CAR CONSTRUCTION</u>
1.1	Only vehicles of a road going use are permitted
1.2	Space Frame and Semi Space frame Vehicles are not permitted
1.3	Chassis and Sub Frame must exist in its entirety
1.4	Repaired Chassis may only be done with materials not exceeding 1 mm thickness
1.5	Silhouette to remain unaltered
1.6	Wheelbase to remain standard
1.7	Sunroof openings to be closed
1.8	Bonnets may not be cut to accommodate air cleaners
1.9	Firewall may be cut to accommodate the Carburetor and Exhaust system only
1.10	Front Valance may be reinforced by plating no thicker than 1 mm
1.11	All interior trim must be removed
1.12	Inner door panels may be removed
1.13	Rear of car may be closed with plating to create separate compartment for the fuel tank
1.14	

1.15	Fibre glass panels are prohibited; Cosmetic Panels )Bonnet, Boot Lid, Fenders, and doors)
1.15.1	may be replaced with fiberglass providing the original silhouette is retained.
1.15.2	Wheel arch spads are permitted. These spads may not protrude more than 50 mm and may only be manufactured from fibre
1.15.2	
1 16	glass.
1.16	Fibreglass spads are permitted provided they are rounded at the point where they reach the front and rear fenders. They may NOT form sharp edges and scrutineers may request for offending parts to be removed before allowing participation.
1.17	Fibreglass body repairs are permitted
1.18	Top of wheels may not protrude beyond the spads when viewed from above
1.19	Only ORIGINAL bumpers and original bumper stiffeners are permitted.
1.20	Engines must be mounted in original position
1.21	Fuel Tanks must be covered if they are not placed behind "boot plate"
1.21.1	Sill protectors permitted but may not exceed 38mm x2mm OD round tube or boxed 2mm
	plating
1.21.2	Sill protector must be rounded at the leading and trailing edges if it does not form part of the wheel arch and spad.
	Where round tubing is used there may not be more than 3 mounting points per side
	The state of the s
JSRT 2.	Brakes:
2.1	Brakes should remain standard
2.2	No modified pedal boxes are permitted
2.3	No ABS brakes are permitted
2.4	Vehicles with brake drums on the front axle may be altered to accommodate brake discs
	and calipers of latter models.
JSRT 3.	Dimension and Weights
JSRT 3. 3.1	<u>Dimension and Weights</u> Minimum weight of a stock rod will be 800kg including the driver
3.1	Minimum weight of a stock rod will be 800kg including the driver
3.1 3.2	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as
3.1 3.2 JSRT 4.	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine:
3.1 3.2	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer
3.1 3.2 JSRT 4. 4.1	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification
3.1 3.2 JSRT 4. 4.1 4.2	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body
3.1 3.2 JSRT 4. 4.1	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted
3.1 3.2 JSRT 4. 4.1 4.2 4.3	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200
3.1 3.2 JSRT 4. 4.1 4.2	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition
3.1 3.2 JSRT 4. 4.1 4.2 4.3	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable;
3.1 3.2 JSRT 4. 4.1 4.2 4.3	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable;
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered No SU Carburetors are permitted with exception of 1275cc Leyland Mini
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6 4.7	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered No SU Carburetors are permitted with exception of 1275cc Leyland Mini Adaptor plate between the carburetor and inlet manifold is permitted
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6 4.7 4.7.1	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered  No SU Carburetors are permitted with exception of 1275cc Leyland Mini Adaptor plate between the carburetor and inlet manifold is permitted Adaptor plate design is free
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6 4.7 4.7.1 4.8	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered  No SU Carburetors are permitted with exception of 1275cc Leyland Mini Adaptor plate between the carburetor and inlet manifold is permitted Adaptor plate design is free Standard cylinder heads only
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6 4.7 4.7.1 4.8 4.9	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered No SU Carburetors are permitted with exception of 1275cc Leyland Mini Adaptor plate between the carburetor and inlet manifold is permitted Adaptor plate design is free Standard cylinder heads only Standard cams only
3.1 3.2 JSRT 4. 4.1 4.2 4.3 4.4 4.5 4.5.1 4.6 4.7 4.7.1 4.8 4.9 4.10	Minimum weight of a stock rod will be 800kg including the driver All dimensions and specifications must be according to the manufacturer's specifications as records by the Auto Date Digest unless there is proof of any error in the Auto Data Digest.  Engine: Engines may not exceed 1600 plus 60 oversize CC after reboring to maximum Manufacturer specification The engine make must match the vehicle type i.e. Nissan engine in a Nissan body No engine parts whatsoever will be interchanged between engines, e.g. 1400 to be fitted with a 1400 flywheel and not of a 1200 Electronic ignitions are permitted and restricted with TP100, 500 and 900 modules. Ignition must not be programmable; Carburetor restricted to original manufacturers specification Jetting may be altered No SU Carburetors are permitted with exception of 1275cc Leyland Mini Adaptor plate between the carburetor and inlet manifold is permitted Adaptor plate design is free Standard cylinder heads only Standard cams only Vernier camshaft pulleys are not permitted

	No aftermarket manifolds permitted.
4.12.2	No adapter plates may be used between the cylinder head and intake manifold
4.12.3	Sandwich plates between the Cylinder head and Inlet Manifold are permitted provided they
	share an identical bolting pattern and that the sole purpose is to seal injector mounting
	slots.
4.13	Intake and exhaust port on cylinder head are to remain standard
4.14	No port matching
4.15	No air intake ducting will be permitted
4.16	Electric water pumps are not permitted
4.15	Flex plates are not permitted
4.16	· ·
	Flywheels to remain standard
4.17	Aftermarket ignition systems are not permitted
4.18	Balancing of engines parts is allowed. Crankshafts to remain standard
4.19	Three angle valve seats are permitted
4.20	Valves must be standard
4.21	Only standard valve springs are permitted
4.22	Valve guides must be standard
4.23	Head bolts not to be cut down and additional washers may not be added
JSRT 5.	Exhausts:
5.1	Branches are permitted
5.2	Effective silencers are compulsory
JSRT 6.	Fuel
6.1	Only pump fuel is permitted
6.2	Ethanol based pump fuel is not permitted
JSRT 7.	Steering and suspension:
7.1	Only commercially available steering racks and steering boxed are allowed, but to remain
	standard to the vehicle, without modifications
	No quick ratio versions are permitted
7.2	
7.2 7.3	· ·
7.3	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable
7.3 7.4	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted
7.3	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock
7.3 7.4 7.5	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced
7.3 7.4	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the
7.3 7.4 7.5 7.6	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear)
7.3 7.4 7.5 7.6 7.7	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs
7.3 7.4 7.5 7.6 7.7 7.8	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon.
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle  Transmission:
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle  Transmission: Only standard gearboxes as fitted in factory are allowed
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle  Transmission:
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle  Transmission: Only standard gearboxes as fitted in factory are allowed
7.3 7.4 7.5 7.6 7.7 7.8 7.8.1 7.9 7.10	Suspension can be altered on the left front wheel (top or bottom) but may not be adjustable No adjustable shock absorbers are permitted Only Gabriel, Armstrong or Monroe shock absorbers are allowed if the original Shock absorbers are replaced Rear suspension must remain standard but can be lowered by heating or cutting of the springs (Mini may cut down the cones only front and rear) LDV's and rear wheel drive vehicles can make modifications on the rear springs Coil springs are restricted to springs originating from any road going Saloon. Springs may be cut to lower vehicle Competition Springs and Lowering kits are NOT permitted On drivers side a 125mm block must pass under the sill excluding the lip edge, from end to end with the Competitor in the vehicle  Transmission: Only standard gearboxes as fitted in factory are allowed On front wheel drive vehicles gearbox of the same make and brand can be interchanged to

8.3	On rear wheel drive vehicles, the gearbox can be interchange (Ford to Ford if it is a direct fit without the need of an adaptor plate which is not permitted)
8.4	Limited slip differentials are not permitted
8.5	The differential may be locked
JSRT 9.	Wheels and Tyres
9.1	Restricted to the following types of tyres
	- Dunlop FM800A 195/15 82V
	- Continental Premium Contact 5 195/15 82V
	- Hankook Ventus V12 Evo 2 195/15 82V
	- Apollo Alnac 205/R13 87H
	- 185 x 60R 14" H or T rated tyres only
9.2	Tyre profiles are free
9.3	Competitors are reminded that stock levels are subject to Manufacturer backlogs and
	Consumer demands and need to bear this in mind when choosing the tyre they wish to
	utilize.
JSRT 10.	Wings:
10.1	Wings are not permitted;
