## Community Stakeholder Advisory Committee Update

June 6, 2022

The Community Stakeholder Advisory Committee (CSAC) began its work in October of 2021 to advise the Atlanta Police Foundation (APF) on elements of the Atlanta Public Safety Training Center (APSTC) development. Since the committee's formation, the following recommendations have been made and adopted by the Atlanta Police Foundation.

### Firing Range Considerations

Relocation of firing range to the most southern portion of the site - closest to the industrial park and away from residential areas

Baffling around the firing range to further mitigate the impact on residents

The APF has agreed to ensure the new firing range meets all EPA standards for quality and includes upgraded HVAC and a remediation plan for lead collection

### Public Appearance

Addition of 100ft minimum tree buffer along residential facing aspects of the facility

Removal of invasive plant species in an effort to preserve native species

### Community Use and Programming

Addition of a pavilion for community use

Opportunities for community groups and organizations to make use of meeting space within facility

Develop a public safety partnership program with neighboring schools and youth organizations

### Security Elements

Addition of security cameras, license plate readers and street lights around the site and neighboring communities

### Noise Mitigation

Engagement of an acoustic engineer to provide recommendations around opportunities to further reduce facility noise

Revision of the Emergency Vehicle Operators Course (EVOC) grading to allow natural terrain to serve as a buffer and further reduce any potential noise to surrounding communities

Removal of explosives from the site plan

### Infrastructure

Addition of Constitution Rd. site entrance to alleviate vehicular traffic on Key Rd.

Addition of sidewalks along Key Rd. for pedestrian traffic

Addition of designated public parking at the site

# ATLANTA PUBLIC SAFETY TRAINING CENTER

## Updated Site Plan

### Community Input

Community input is being gathered through surveys sent to community members. Additional updates will be sent via eblast to ensure community members are aware of the CSAC's progress as well as opportunities for participation and feedback. Sign up to receive updates and participate in surveys and focus groups.

### ENGAGEMENT ACTIVITY

The CSAC is working to form educational partnerships that will allow the APSTC to build relationships with local schools and youth groups. Additionally, we are focusing our efforts toward green space activation within the scope of the project in an effort to provide feedback relative to connectivity - including trails, sidewalks, bike paths, and other infrastructure elements necessary to support connectivity. Further, we are working to enhance our outreach efforts to engage with impacted organizations to gain broader perspective on the project.
