

# Rock Light Kit Installation

- 1.** First pick where you plan to mount your rock lights. There are 8 total in the kit and can be rearranged some to fit your needs. Mounting can be done by drilling 1/8" holes and using the screws provided or with zip ties/your choice of mounting hardware.
- 2.** The rock light have a specific direction of flow to connect the cables. You will see on the LED strips an arrow pointing one way, the arrows point to the end of the strip so when installing the pods be sure to have the beginning of the strip within cable reach of the controller output cable you'll be connecting to.
- 3.** Each pod and the extension cables have a male and female end so as long as you followed step 2 correctly it will be self explanatory.
- 4.** Connect the cables/pods to the next cable/pod aligning the index guide on both. Tighten the plastic nuts finger snug.
- 5.** This kit does not come with a controller as it is typically used in conjunction with our led whips. If you are using these as a stand alone application you will need either a standard RF dual whip kit (TTMW-DWIK) or a Bluetooth kit (TTMW-BTIK).

Please feel free to contact us if you have any issues or questions, enjoy your *Mega Whipz*!!
