Why Checkaface?

In today's digital age, the line between illusion and reality is increasingly blurred, making it crucial to have a reliable means of identity verification. Checkaface addresses this market need by offering an infallible identity card system based on cutting-edge tri-secure technology, allowing individuals to confidently identify themselves and others.

CHECKAFACE

www.checkaface.com

Checkaface leverages proprietary Tri-Secure technology to provide cutting-edge facial recognition applications for diverse markets: health, security, entertainment, and education. Our goal is to revolutionize biometric systems worldwide, offering game-changing solutions for identity fraud and AI deception.

Checkaface is a revolutionary facial recognition technology company that provides secure and reliable identity verification solutions. Their cutting-edge AI-powered algorithms and deep learning capabilities enable accurate and efficient identification, catering to various industries' security and authentication needs.

CHECKAFACE

www.checkaface.com

TRANSFORMING BIOMETRICS

Checkaface's Tri-Secure technology offers a robust solution to address identity fraud through precise facial recognition applications designed for biometric systems developers and integrators. Our deep learning algorithms provide accurate identification, ensuring security and peace of mind.

The Problem

The utilisation of facial recognition technology is experiencing significant growth. One of the rapidly expanding surveillance technologies, it pervades our daily lives, frequently unbeknownst to us.

Facial recognition serves two primary functions: identification and categorization. Identification is accomplished by comparing real-time or recorded digital footage with pre-existing photos stored in a database. When information is classified or grouped into categories, the impacts of facial recognition technology become more extensive. The system has the capability to autonomously categorise individuals based on discernible characteristics such as age, gender, weight, and even inferred sexual orientation, without the need for human intervention.

The system categorises individuals by comparing photos to the "statistical representation of the average within that category." Facial recognition technology, if widely accessible, has the potential to enable biometric mass surveillance. This is because closed-circuit television (CCTV) and other cameras, which are found everywhere in both public and private areas, can be enhanced with the ability to recognise faces. Facial recognition technology is currently utilised by both law enforcement agencies and private entities in many locations, such as educational institutions and railway stations.

Regrettably, it is a common occurrence that our photographs are posted to facial recognition databases without our knowledge or approval. Recently, it was uncovered that Clearview AI, a technology company based in the United States, illicitly collected more than three billion facial photographs from popular social media platforms like Facebook, YouTube, and Twitter. Subsequently, they provided access to this data to both governmental entities and private companies in exchange for monetary compensation.

Law enforcement is now utilising highly confidential data to inform their police strategies. In the future, this data may also be utilised by public or private entities to make determinations regarding your eligibility for employment, admission to a university course, loan approvals, international travel, or entry into a festival.

The Solution

Checkaface is distinct in a society when constant surveillance is prevalent; it empowers individuals to reclaim control over their own identity. The decision of when and how to utilise it is entirely up to you. Security is a reciprocal procedure, including both parties providing proof of their identities. In this regard, it is your prerogative to determine who should disclose their identity.

Being included in numerous facial recognition databases is a depersonalised and intrusive violation of both our privacy and civil liberties.

When using an app, it is crucial to mutually verify your identity with another person. It is unnecessary for your image to be saved anywhere other than in your own secure and verified private storage, and the same applies to the other person.

Localising and maintaining control over various processes such as dating apps, taxi services, access to secure buildings, communication with your bank, secure online purchases, airport terminals, Ebay and Gumtree transactions, event ticketing and entry, device unlocking, and healthcare concerns can be achieved.

While we acknowledge that there are other facial recognition systems available, Checkaface stands out as one of the most sophisticated and potentially the most secure. This is due to our cutting-edge tri-secure technology and our use of personalised, impregnable blockchain data storage. Once your verification is complete, we no longer have the ability to access your data unless you require modifications to the information you initially provided.

By leading with our values, we will create a product that brings value and confidence back in people's lives

Applications

A Summary of the uses that Checkaface can be applied to:

Eradication of online abuse and control of catfishing techniques

Enabling password free access

Assurance that you taxi driver is both who he says he is and insured

Secure Building Access

Automated check ins at airports, sporting events and concerts

Early identification of certain illnesses

Avatar creation for gaming and video producers

Age checking

Secure communication with your bank

Ticketing and online 3rd party direct transactions

Early identifier skin diseases

Checkaface in Action

Healthcare

Early Syndrome
Detection

Security

Identity
Verification

Entertainment

Realistic Avatar
Creation

Banking

Biometric
Authentication

Healthcare Applications

Patient Photo Anonymization

Checkaface's deep learning algorithms transform patient photos into de-identified facial descriptors, removing all personally identifiable information while preserving relevant facial features.

Syndrome Prioritization

The de-identified facial descriptors assist in prioritizing genetic syndromes and conditions based on facial features, enabling more accurate and efficient diagnosis.

Feature Annotation

By analyzing the facial descriptors, our algorithms can annotate specific facial features, providing valuable insights for clinical research and personalized treatment plans.

Security Applications

Catfishing Prevention

Utilize facial recognition to detect and prevent catfishing attempts, where individuals create fake online identities to deceive others.

Physical Access Control

Implement facial recognition systems for secure and efficient access control to buildings, offices, events, and other physical premises, enhancing safety and streamlining entry processes.

Multi-Factor Authentication

Enhance login security by using facial recognition as an additional authentication factor alongside traditional methods like passwords or biometrics.

Payment Verification

Integrate facial recognition into payment systems, both online and in physical establishments, to verify identities and prevent fraudulent transactions, ensuring secure financial operations.

Smartphone Access Control

Enable secure and convenient access to smartphone applications and data by using facial recognition as unlock method, eliminating the need for passwords.

Device Unlocking

Utilize facial recognition as a convenient and secure method to unlock personal devices, such as laptops or tablets, eliminating the need for traditional password entry.

Online Service Access

Leverage facial recognition to securely access previously contracted online services, platforms, and accounts without the hassle of remembering multiple passwords.

Visitor Management

Enable efficient and secure visitor check-in processes at hotels, airports, and other tourist services by implementing facial recognition for identity verification and access control.

Applications – Entertainment & Education

Our smartphone-based Tri- secure 270-degree facial scanner creates photorealistic avatars in real-time for gaming immersion. Game creators can then let users create their own detailed avatars.

Our Tri-secure software integrates with 3D printing, enabling the creation of realistic facial replicas.

Retrieve information about celebrities by scanning their photos using our facial recognition software.

Disabilities such as autism and blindness can make it difficult to recognize facial emotions. Our software uses vibrations from a smartphone to indicate the emotion being emitted.

Applications – Banking

Identity Verification

Authenticate customers' identities for mobile or online banking using facial recognition technology, ensuring secure access to financial services.

Access Control

Implement 'contained access control' facial recognition to manage entry and access to secure areas of bank facilities, protecting sensitive information and assets.

'In the Wild' Facial Recognition

Leverage advanced facial recognition capabilities to locate unknown individuals involved in incidents, enhancing safety, preventing theft, and sharing critical information across branches.

Contactless Transactions

Enable secure, contactless financial transactions by integrating facial recognition as an authentication method for payments, eliminating the need for physical cards or passwords.

Fraud Prevention

Detect and prevent fraudulent activities by cross-referencing facial data against known databases of individuals involved in financial crimes or identity theft cases.

The Identity Fraud Crisis

Identity fraud is a pervasive issue in the digital age, with far-reaching consequences for individuals and organizations alike.

Billions affected

Identity fraud impacts billions of internet and social media users worldwide.

AI misuse

The escalating use of AI technology for deceitful purposes poses significant risks.

Lack of global regulation

The absence of a global legislative partnership leaves individuals and organizations vulnerable to security breaches.

STARTLING STATISTICS

Identity Fraud Metric	Value
Global financial losses due to identity fraud	\$38.95 billion
Number of social media users worldwide	4.95 billion
Number of internet users worldwide	5.3 billion
Instances of telecommunications fraud	Significant concert, particularly related to account manipulation

Meet the Leadership Team

Anthony Papadopoulos

CHIEF EXECUTIVE OFFICER

Anthony is a visionary leader at the forefront of innovation in the field of artificial intelligence (AI). With a relentless passion for technology and a keen understanding of market dynamics, Anthony has emerged as a driving force in shaping the future of AI.

Rowen Wainwright

CHIEF MEDIA OFFICER

Rowen is an academic, with a keen eye on professional development and continuous improvement, a background which includes 25 years experience operating within the ever changing media.

Ian Dickinson

CHIEF FINANCIAL OFFICER

Ian is a dynamic financial leader with a proven track record of driving financial excellence and strategic growth in diverse industries. With a career spanning over three decades, Ian has garnered extensive experience in financial management and risk assessment.

Divyesh Vanesh

CHIEF TECHNOLOGY OFFICER

Divyesh is an experienced Chief Technology Officer with a demonstrated history of working in the Information Technology and services industry. Divyesh is a Master of computer applications (MCA) focused in computer software.

Market Opportunity

The global facial recognition market is experiencing unprecedented growth, fuelled by increasing security needs and rapid technological advancements. With billions of internet, social media users, and an ever- growing gaming community, the demand for secure identification systems is skyrocketing. Checkaface's innovative technology is perfectly positioned to cater to this vast and expanding market, offering a comprehensive solution that encompasses security, health, entertainment, and education sectors.

Traction

Business Model Highlights

Checkaface's licensing model, combined with additional service offerings, creates a robust and diversified revenue stream for the company.

Licensing Model

Checkaface provides facial identification technology and deep learning algorithms as software development kits (SDKs) to customers through a licensing mode.

Training and Consultancy Services

Additional revenue stream from offering training and consultancy services related to the licensed technology.

Multi-Platform Compatibility

The SDKs enable the development of solutions on multiple platforms, catering to various use cases such as security and medical applications.

Maintenance, Support, and Certification

Checkaface provides maintenance, support, and certification services to optimize the licensed products, generating recurring revenue.

Key Facts

Proprietary AI Technology

Our groundbreaking facial recognition technology is the result of over 30 years of collective experience in the field, harnessing the power of artificial intelligence to achieve unparalleled accuracy.

Proven Fraud Detection Expertise

Our experienced board boasts an impressive 100% record in detecting fraud using AI, ensuring that our solutions are at the forefront of identity verification and security.

Global Reach

With patents pending in 16 countries, our cutting-edge technology is poised to revolutionize identity verification on a global scale, providing a secure and reliable solution for individuals and businesses alike.

Anticipated Growth

Competitive Landscape

Built with the knowledge of the power of AI

Our facial recognition technology is developed with a deep understanding of the latest advancements in artificial intelligence, providing a cutting-edge solution.

More user-friendly

Our solutions prioritize user-friendliness, with intuitive interfaces and seamless integration, making them accessible and easy to use for a wide range of users.

More products and features for both licensor and licensee

We offer a comprehensive suite of products and features tailored for both licensors and licensees, ensuring a seamless and efficient experience for all stakeholders.

Better integration with blockchain for security

Our facial recognition technology seamlessly integrates with blockchain technology, providing enhanced security and transparency for sensitive data and transactions.

Leaner and more adaptable to change

Our lean and agile approach allows us to swiftly adapt to changing market dynamics and customer needs, ensuring our solutions remain relevant and future-proof.

Cheaper licensing fees

We offer competitive and cost-effective licensing fees, making our solutions accessible to a broader range of customers without compromising on quality.

We are looking for...

Investors Who...

Believe in, and want to be part of a revolutionary multi-faceted technology company.

Are excited by the prospect of extraordinary returns on their investment.

Are complicit with the benefits of an Enterprise Initiative Scheme and the tax benefits that it brings.

£5M

£ 5,000,000

**To launch and expand the
product across teams & build
a foundation for scalability**

✓ Enhance Product Development

✓ Accelerate Customer Growth

✓ Launch Marketing Campaign

✓ Establish Global Presence

Use of Funds

Scaling Checkaface to the next level

Our £5 million funding will be strategically allocated to bolster product development, accelerate customer growth, and launch a solid marketing campaign. This investment will allow us to enhance our technology, expand our reach, and establish our presence in the global market. As a result, investors can anticipate substantial returns as Checkaface becomes a leader in the burgeoning facial recognition industry.

EIS Project

An opportunity to invest in an EIS qualifying project that the whole market has been waiting for. Technology is constantly developing in ways that make it very difficult, if not impossible, to identify between illusion and reality. We hear stories of unlicensed taxi drivers, calls from high street banks, holiday accommodation scams, romance scams (catfishing), insurance scams and many more.

Checkaface is conscious of the need for privacy but also the need for caution when meeting or corresponding with somebody you have never met before and, with that in mind has developed a system that every person should have – an infallible identity card, based on tri - secure technology that not only allows you to identify yourselves to others but also forces them to identify themselves to you.

Why would you not Checkaface each other ? Because one of you has something to hide.

We are accepting investment into Checkaface by way of the issue of 5,000,000 shares at a value of £1 each, which will form 10% of the company's share capital. The shares being sold are equal to all other shares in the company with equal voting rights and equal share of dividends. For more information, please refer the Statutory Information sheet.

The shares benefit from HMRC advance assurance for EIS tax relief, meaning that within 40 days the company will be fully EIS compliant, and shareholders will benefit from the various tax incentives that comes with it. Please refer to the EIS Factsheet for more information.

Timelines and Milestones

Out of the blocks

All of our hard work for the past 4 years, working with some of the most innovative technology teams across the globe, sharing inputs and enduring 72-hour brainstorming sessions we are finally ready to go live.

Establishing

This is when we expect to gain serious recognition as a brand and pass the 10 million user mark and a 100,000 licenses sold. Pushing on from here becomes organic and we are now establishing a serious value to the business.

Considering a Flotation

With anticipated annual revenues approaching £50 million and over 100 million users we believe our 5-year target of a flotation is within sight, and we will be seeking an estimated 6x multiple of revenues to achieve a valuation of £300 million, and giving investors a 500% ROI.

Onboarding

In our first year of operation, we aim to have over 1 million people using our product and over 10,000 licences sold. These are conservative numbers and should be readily achievable.

Global Reach

We are now expecting to have a serious foothold in worldwide markets with our unique brand of privacy, security and safety and we expect revenues to exceed £25 million this year.

Stick or Twist

Whilst we will have succeeded in creating a very valuable company, we believe these are just the seeds of growth and the business will flourish as a public company and with continued investment into product development we can grow the share price significantly.

Offer Summary

Key Details	Value
Number of shares available in this subscription	5,000,000
As a % of total	10
Price per share	£1.00
Shares in issue pre-funding round	45,000,000
Maximum number of shares in issue post funding	50,000,000
Opening date	27th May 2024
Offer period	3 months
Closing date	27th August 2024
Board of Directors	Anthony Papadopolous, Rowan Wainwright, Ian Dickinson, Divyesh Vanesh
Nominee (to hold shares)	Edward McCourt and Company LLP
Legals	Cifford Harris and Co Solicitors
Accountants	Mazars LLP
EIS Advisors	Seeds Legal

EIS Factsheet

Income tax relief

Investors can claim up to 30% income tax relief on investments up to £1 million per year (£2 million for knowledge-intensive companies)

Capital gains tax deferral

Investors can defer capital gains tax on gains reinvested into EIS-qualifying companies, providing tax relief of up to 28%

CGT exemption on disposal

Any capital gains made on the disposal of EIS shares held for at least 3 years are exempt from capital gains tax

Inheritance tax relief

Investments held for at least 2 years can qualify for 100% inheritance tax relief, reducing the inheritance tax liability on transfer to nil

Loss relief

If EIS shares are disposed at a loss, the net loss (after income tax relief) can be offset against income or capital gains

Statutory Information

Articles Available

The Company's Articles of Association are available for inspection at the registered office

No Subsidiaries

The Company does not have any subsidiaries as of the date of this document

Borrowing Capacity

The Company has the contractual capacity of a natural person and can borrow, guarantee, and give security

Legal Compliance

As of this document, the Company has received no notification of any breach of laws in its operating countries

Checkaface operates within the legal framework, maintaining transparency and adhering to regulatory standards.

Share Capital

Voting rights

There are no differences in the voting rights of shareholders

Dividends

The Company may resolve by ordinary resolution to declare dividends, and all dividends are apportioned proportionately

Return of capital

On a winding up, the assets will be divided amongst shareholders in proportion to shares held

No outstanding securities

There are no outstanding convertible, exchangeable, or securities with warrants issued by the Company currently

All Ordinary Shares in the Company rank pari passu and there are no outstanding or planned issues of other securities.

Conflicts of Interest

Declaration of Interest

Directors must declare the nature and extent of their interest in any potential conflict to the Board as soon as reasonably practicable, providing all relevant details

Non-Participation in Decision-Making

The interested Director cannot be counted towards the quorum or vote on any resolution authorizing the conflict

Potential Exclusion

The Board may decide to exclude the interested Director from any meeting while the conflict is under consideration

Imposing Terms

The Board can impose terms on the interested Director to deal with the conflict, and the Director must conduct themselves accordingly

Revocation or Variation

The authorization of a conflict can be revoked or varied at any time by the Board, without affecting prior actions taken in accordance with the authorization

Join the Facial Recognition Revolution

Revolutionary technology

Checkaface offers cutting-edge facial recognition software, revolutionizing security.

Investment opportunities

Investors can be part of this groundbreaking venture by investing in Checkaface.

Global security enhancement

The technology helps bolster security measures worldwide, making the world safer.

Social impact

Checkaface aims to make a positive impact on society through ethical use of facial recognition.
