May 31, 2023	19,476	672 million	0.0029%

CDC Reports date back to December 14, 2020; I started tracking with report from September 7, 2021. As of March 7, 2023, the CDC has ceased updating the numbers, sans explanation. While the CDC appears to have provided an update on May 31, 2023, there is no update to the numbers: "More than 672 million doses of COVID-19 vaccines were administered in the United States from December 14, 2020, through March 1, 2023. During this time, VAERS received 19,476 preliminary reports of death (0.0029%) among people who received a COVID-19 vaccine." As of June 30, 2023, there have been no further updates. I contacted the CDC on May 18, 2023, to inquire as to why there had been no more updates, then there was an "update" on May 31, but there are no updates to the statistics, as of the March 7th reporting.

*This counts "doses" not individual humans, and it appears to include "boosters" therefore indicating multiple vaccines for one individual, which intentionally scews the data and alters the number of deaths and percentage of deaths, which would likely be at least twice as high, if not thrice as high.
