The Challenge

Many organizations are dealing with data silos bottleneck hampering abilities to respond quickly to changing market conditions and make agile decisions. Impacting business innovation, inefficiencies, and not able to meet business goals.

While much of this can be addressed through S/4HANA implementation, another large problem is performing these tasks in a time effective manner. In a high-paced business environment, one does not want to risk slowing down all business operations due to the processing of a request through other computer applications.
Naturally, as a company grows in rapidly changing business environment, there becomes an issue with time critical business decisions, data accessibility, uncovering hidden patterns, predicting future trends, and automate complex tasks. There becomes a need for a robust tightly integrated AL/ML-driven-real-time self-service data analytical capability to unlock the full potential of organizational data, drive innovation, improve efficiency, and achieve business goals.
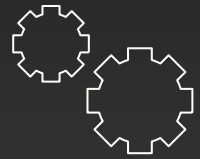

The Solution

The solution for all these challenges indeed comes through the SAP Business Data Cloud, a fully managed SaaS solution that aims to unify and govern all SAP and Non-SAP data.

QServ have rich experience preparing and implementing client specific analytics strategy and roadmap.
Key differentiating factors:
- ✓ Unified Data Foundation
- ✓ Pre-Built Data Products
- ✓ Natively integrates w/Databricks

- ✓ Comprehensive view of all SAP & 3rd Party data
- ✓ Pre-Built contents for rapid value delivery
- ✓ Easier to discover, share, govern, and model data
- ✓ Apps: Automate, adapt, and learn in real-time
- ✓ Automate tasks, gain predictive insights, and improve business outcomes
- ✓ Migrate to cloud legacy on-premises BW/4HANA

SOLUTION

We are expert in business intelligence strategy preparation and execution. We leverage advanced analytics, AI, and machine learning into business intelligence solutions
