WAX + LUBRICANTS

Engineered drivetrain solutions built to reduce friction, extend component life, and deliver measurable efficiency gains. From hot melt wax systems and performance additives to precision lubricants and assembly compounds, this collection is designed to run quieter, cleaner, and faster under real world conditions.

- ☐ SECRET CHAIN BLEND - HOT MELT WAX
- ☐ SUPER SECRET DRIP WAX CHAIN COATING
- ☐ ENDURANCECHIP LONGEVITY WAX ADDITIVE
- ☐ SPEEDCHIP EFFICIENCY WAX ADDITIVE
- ☐ STRIPCHIP DEGREASING WAX ADDITIVE
- ☐ ULTIMATE CHAIN STRIPPER + WAX PREP
- ☐ PRE-WAXED RACE DAY CHAINS

- ☐ SYNERGETIC® OIL-BASED LUBRICANT
- ☐ SYNERG-E E-BIKE OIL-BASED LUBRICANT
- ☐ SYNERGETIC RACE GREASE
- ☐ ANTI-SEIZE ASSEMBLY PASTE
- ☐ HOLD FAST CARBON PASTE

SECRET CHAIN BLEND HOT MELT WAX

SILCA Secret Chain Blend (Hot Wax) brings all of the super speed and silence of our Super Secret Chain Lube in a hot-melt wax-dipped chain. Secret Chain Blend also utilizes the world's fastest, most lubricious additive, nano-scale Tungsten Di-Sulfide. NanoPlatelet WS2 has less than 1/3 the dynamic coefficient of friction of PTFE and 1/4 that of Molybdenum Disulfide (MoS2). The best part of this product is the submersible pouch! Don't want to dedicate a crock pot to hot-waxing your chain? Simply put the chain in the bag and immerse in hot water!

- ▶ **Immersion Hot Melt Wax** permanently transforms your chain to a silent, high performance component
- ▶ **Low barrier to entry** with the hot melt wax "in a bag" option, creates a simple way for someone to apply hot melt wax their bicycle chain for the first time
- ▶ **The tungsten di-sulfide** formula coats the chain using paraffin pellets to create the lowest friction hot wax on the market
- ▶ **The sounds of silence** is one the best features of the hot melt wax formula, which allows a cyclist to enjoy the ride without the chain noise

ENDURANCECHIP WAX PERFORMANCE ADDITIVE

Maximize the lifespan of your waxed chain. **EnduranceChip** is designed to complement **Secret Chain Blend Hot Melt Wax** by **extending the single application longevity by 2-3X**, allowing you to extend wax intervals up to 600-800km before rewaxing. This hot melt wax additive is a key part of our wax lube products lineup, perfectly integrated for use with the **Ultimate Chain Waxing System**.

Key Features & Benefits

Advanced Technology: Each EnduranceChip additive bar increases the durability aspect of the hot wax. SILCA's advanced technology saves time and expense while ensuring a clean, quiet, and longer wearing drivetrain.

Convenient Form: EnduranceChip is sold in a bar/chain link-like form. Using one bar per chain effectively increases the lifespan of the lubrication and the chain.

Simple Application: Integrated seamlessly with the SILCA Super Secret Chain Blend Hot Melt Wax, EnduranceChip ensures a straightforward application process. Follow easy steps for optimal results, making chain maintenance simple and hassle-free.

Optimized Performance: EnduranceChip works best with SILCA Super Secret Chain Blend Hot Melt Wax, ensuring the fastest and longest-wearing drivetrain. Experience enhanced performance, reduced friction, and minimized wear with every ride. It can be used in conjunction with StripChip.

SPEEDCHIP WAX PERFORMANCE ADDITIVE

Be ready on race day with a freshly waxed chain. **SpeedChip** is designed to complement **Secret Chain Blend Hot Melt Wax**, increasing drivetrain efficiency and requiring less watts to achieve your desired speed. This hot melt wax additive is a key part of our wax lube products lineup, perfectly integrated for use with the **Ultimate Chain Waxing System**.

Key Features & Benefits

Enhanced Lubrication: SpeedChip transforms SILCA Secret Chain blend Hot Melt Wax into the fastest lubricant available for events lasting up to 6 hours in duration.

Increased Drivetrain Efficiency: Boosts drivetrain efficiency by up to 0.6%, translating to a gain of 2 watts at a 400-watt input.

Event-Specific Optimization: Designed specifically for Time Trials, Triathlon, Road Racing, and Gravel Racing events lasting less than 6 hours.

Simple Application: Integrated seamlessly with the SILCA Super Secret Chain Blend Hot Melt Wax, SpeedChip ensures a straightforward application process. Follow easy steps for optimal results, making chain maintenance simple and hassle-free.

Performance Boost: Provides a measurable increase in drivetrain efficiency, giving you a competitive edge for your event.

STRIPCHIP HOT WAX DEGREASING ADDITIVE

No more degreasing prep with SILCA's innovative **StripChip** degreaser additive. Designed to complement **SILCA Secret Chain Blend Hot Melt Wax**, StripChip transforms the chain maintenance process, making it easier and so much more efficient than ever before. Here's why StripChip is the solution your customers have been waiting for:

- ▶ **No More Degreasing Prep:** StripChip eliminates the need for degreasing new factory chains. With StripChip, it's straight into the hot wax for simple chain preparation.
- ▶ **Advanced Technology:** Each StripChip degreasing additive piece binds with factory grease found in new chains, turning it into wax. SILCA's advanced technology saves time and expense while ensuring a clean, quiet, and ultra-efficient drivetrain.
- ▶ **Convenient Form:** StripChip is sold in a candy bar-like form, with each bar containing six pieces (12 grams each). Using one piece per chain effectively eliminates factory grease, allowing hot melt wax to penetrate the inner workings of chain pins and rollers.
- ▶ **Simple Application:** Integrated seamlessly with the SILCA Super Secret Chain Blend Hot Melt Wax, StripChip ensures a straightforward application process. Follow easy steps for optimal results, making chain maintenance simple and hassle-free.
- ▶ **Optimized Performance:** StripChip works best with SILCA Super Secret Chain Blend Hot Melt Wax, ensuring the fastest and longest-wearing drivetrain. Experience enhanced performance, reduced friction, and minimized wear with every ride.

SUPER SECRET CHAIN COATING

SILCA Super Secret Chain Coating brings all of the super speed and silent running of a hot-melt wax-dipped chain to a drip applied wax (all of the benefits, none of the hassle!). Secret Chain lube also utilizes the world's fastest, most lubricious additive, nano-scale Tungsten Di-Sulfide. NanoPlatelet WS2 has less than 1/3 the dynamic coefficient of friction of PTFE and 1/4 that of Molybdenum Disulfide (MoS2).

- ▶ **Proprietary formula** that has the properties of hot melt wax without the heat
- ▶ **Tungsten Di-Sulfide NanoPlatelets WS2** are utilized to transform the surface of the chain driving the lube into the crevices during the application process
- ▶ **Increasing speed** and **reducing noise** by providing a large reduction in chain friction, this lube out-performs others on the market and extends the life of the chain
- ▶ Multiple application methods to choose from, either a **4 oz.** or **8 oz. drip bottle**, allowing for a lower barrier to entry for this product
- ▶ Part of a complete system, the **Super Secret Chain Coating** can stand alone for use or can be added to a complete waxing system, as a maintenance product to **Secret Chain Blend** (Hot Melt Wax). The entire system has been formulated to complement each other

PRE-WAXED RACE DAY CHAINS

The race day solution to get every last watt onto the road. These chains are optimized and waxed with Secret Chain Blend saving 30% over competitor chains.

All chains are stripped of all factory grease, ultrasonically cleaned, then hot waxed with Secret Blend Hot Melt Wax. This process skips the diamond polishing of our other options and only loses about .5w of efficiency. Save time and effort of stripping your chain and get the fastest chain treatment available with a Pre-Waxed Race Chain.

ULTIMATE CHAIN STRIPPER + WAX PREP

SILCA Chain Stripper is a highly concentrated, biodegradable degreaser combined with a wax adhesion promoter (primer) which allows for fast, single step preparation of factory chains for waxing while also improving wax adhesion and increasing longevity. SILCA Chain Stripper reduces the time and number of chemicals required to properly prep a factory greased chain to less than 10 minutes and can even be used to prepare chains on bicycle for drip wax application.

- ▶ **Encapsulates and removes** oils and grease from the chain and drivetrain while promoting wax adhesion and repelling water for reduced corrosion build up
- ▶ **Biodegradable formula** that is non-volatile and no odor
- ▶ **Metal safe** as there is no hydrogen embrittlement risk and stripper has anti-corrosion properties
- ▶ **Cost** is similar or cheaper than most multi-chemical strip methods for bike cleaning

ULTIMATE CHAIN WAXING SYSTEM

From the leaders of waxed drivetrain performance, SILCA is proud to introduce the **Ultimate Chain Waxing System**. It is your compact at-home kit for immersive waxing of chains. The wax warmer, drip stand, and cable coupler are included to make you ready-to-roll for having the cleanest, quietest and most efficient drivetrain possible.

Waxed chains have been utilized by the best Pro World-Tour team mechanics for the fastest bicycles where wattage savings produce stage and race victories. Now you can achieve a smooth and efficient drivetrain with wattage savings, just like the pros, using the Ultimate Chain Waxing System.

Waxing chains has time-saving benefits compared to when using traditional petroleum based lubricants. Waxing will keep you from having to take the time to constantly clean the gritty paste from your drivetrain and not having to deal with greasy hands and stained clothes are really practical benefits.

Riding a waxed chain provides superior efficiency benefits and offers a multiple lifespan expectancy increase for expensive drivetrains for any type of cycling - indoor, road, gravel or mountain.

Statistical Information

Package includes:

- Cable Coupler
- Drip Stand
- Electric Wax Warmer

Dimensions: 200x161x134mm / 7.87x6.33x5.27in

Pot Capacity: 600mL / 20.28 us.fl.oz.

Temperature Range: 75-125°C / 167-257°F

Available with these electrical power plugs: **AUS** (Type I), **EU** (Type C), **N. Amer** (Type B), & **UK** (Type G)

Chain sold separately.

SILCA wax products, sold separately:

- **Super Secret Chain Blend Hot Wax**
- **StripChip** Degreaser (Wax Additive)

SYNERGETIC®

SILCA set out to develop the world's fastest, quietest, longest lasting oil based chain lube utilizing the nano-scale tungsten disulfide to reduce surface wear and friction within the chain.

The secret is a phenomenon known as a durable tribofilm, which is formed under pressure causing the WS2 and other additive to form a highly lubricious solid on the surface of the metal which acts not only as a lubricating surface, but also as a wear surface.

- ▷ **Oil-based lubricant** delivers the ultimate coverage for your ultra distance or extremely wet conditions
- ▷ **Precision applicator** controls the amount of lubricant applied to the chain
- ▷ **Easy application** makes this an easy entry to the SILCA lubricant product line, with no extra cleaning or chain removal needed
- ▷ **Extremely quiet chain** allows the rider to enjoy their journey in silence or whatever the surroundings bring
- ▷ **Commuter and E-bike approved** keeps the entire fleet in top shape and extends the life of the drive train

SYNERGETIC RACE GREASE

Pro-Level Grease for Bearings, Threads, & Assembly Interfaces

Built on the foundation of our award-winning Synergetic Chain Lubricant, **Synergetic Race Grease** delivers uncompromising performance across the most demanding mechanical interfaces. From suspension pivots to threaded installs, this is the grease trusted when every watt—and every component—counts.

- ▷ **Base Formulation:** Type-V ultra-synthetic oil with integrated low-friction additives to reduce wear by up to 90% for longer-lasting components
- ▷ **Application Areas:** Bearings, bushings, suspension pivots, threaded assemblies, press-fit interfaces
- ▷ **Load Capacity:** Engineered to resist displacement under extreme loads, pressures, and environmental conditions
- ▷ **Friction Characteristics:** Optimized for both sliding and rotational surface lowering friction by up to 50%, increasing mechanical efficiency
- ▷ **Environmental Stability:** Maintains performance under heat, moisture, and contamination
- ▷ **Appearance:** Natural (no added dyes or pigments)
- ▷ **Shelf Life:** 5 Years

ANTI-SEIZE ASSEMBLY PASTE

Traditional greases are formulated to reduce friction and corrosion in environments where rolling or sliding friction is present, such as bearings, or bushings. In many applications, grease can be used to prevent the seizing or galling of fasteners or press-fit components when materials are similar, but greases are formulated to have high dynamic film strength and low dynamic friction, which is different from the high static surface loads seen in bolted and press fit interfaces.

For the ultimate in prevention of seizing, galling, and galvanic corrosion, particularly in interfaces between dissimilar materials, we have created an assembly paste known as Anti-Seize. Anti-Seize has an extremely high content of solids suspended in a grease carrier, and can eliminate corrosion and damage at much higher static pressures than traditional grease.

- ▶ **Base Formulation:** Ultra-pure nickel suspended in 100% synthetic grease for maximum stability under load and long-term corrosion protection.
- ▶ **Interface Protection:** Insulates dissimilar materials (carbon, titanium, aluminum, steel) to prevent galvanic corrosion, seizing, and interface noise.
- ▶ **Precision Torque Application:** Lowers static friction for consistent and accurate bolt tension in press-fit and threaded assemblies.
- ▶ **Extreme Durability:** Maintains performance under high pressure, vibration, thermal cycling, and chemical exposure—including sweat and road salt.
- ▶ **Material Safety:** Copper-free, lead-free, and PFAS-free; ideal for high-end bike materials where traditional anti-seize compounds fall short.

Product Package Dimensions

WEIGHT (G)	WIDTH (CM)	HEIGHT (CM)	LENGTH (CM)
95.8	3	4	15

HOLD FAST CARBON PASTE

Traditional carbon assembly pastes rely on grease carriers and low density friction additives to increase clamping friction. While effective, these formulas can migrate, stain, and compromise torque consistency over time.

SILCA Hold Fast Carbon Assembly Paste uses a high tack silicone carrier combined with refined silicate friction modifiers to increase surface grip without the mess of dyed grease based formulas. The result is improved clamping stability at lower torque values, reducing the risk of slippage, fatigue, or surface damage to carbon and alloy components.

- ▷ **High Tack Silicon Base:** Non grease formula resists migration and stays in place during assembly.
- ▷ **Increased Friction Density:** Three to four times more silicate friction modifier than typical carbon pastes for improved grip at lower torque.
- ▷ **Clean Application:** Clear and dye free formula will not stain fingers, clothing, or painted finishes.
- ▷ **Broad Material Compatibility:** Safe for carbon, titanium, aluminum, and painted surfaces.
- ▷ **Torque Stability:** Promotes consistent bolt tension for cockpit and seatpost installations.

TUBELESS + TPU

Performance driven tire setup components for road, gravel, and mountain applications. Lightweight TPU tubes and precision tubeless systems improve rolling efficiency, reliability, and ride feel.

- ☐ **ULTIMATE TPU TUBES**
- ☐ **ULTIMATE TUBELESS RIM TAPE**
- ☐ **ULTIMATE TUBELESS VALVES**
- ☐ **ULTIMATE TUBELESS SEALANT**
- ☐ **ULTIMATE TUBELESS SEALANT REPLENISHER**
- ☐ **ULTIMATE SEALANT REMOVER**

ULTIMATE TPU TUBES

The ultimate compact spare and a premium lightweight upgrade to tubeless.

Ultimate TPU Tubes are made in Germany from clear thermoplastic polyurethane (TPU) for maximum strength, flexibility, and air retention. Designed as both a dependable compact spare and a high-performance replacement for butyl, they deliver long service life and minimal rolling resistance.

A patented mechanical valve bond, threaded aluminum valve with locking nut, and heat-resistant construction ensure reliability through repeated installs and rapid inflations. Each tube includes an adhesive patch and alcohol wipe for dependable field repair.

- ▶ Clear TPU construction eliminates pigments that weaken structure or increase rolling resistance
- ▶ Patented valve connection resists pullout even after repeated use
- ▶ Threaded aluminum valve with locking nut ensures a secure inflation seal
- ▶ Heat resistant; inflate in 15 PSI steps when using high-flow or electric pumps
- ▶ Removable valve cores; extender compatible for deep rims
- ▶ Includes adhesive patch and alcohol wipe

ULTIMATE TUBELESS RIM TAPE

Ultimate Tubeless Rim Tape is engineered with a three layer composite structure combining high tensile PET, stretch compliant PU, and an abrasion resistant outer film to withstand high tension tire installs and repeated service. Unlike standard single layer PET tapes, the construction resists deformation, tearing, and spoke hole abrasion while maintaining a consistent seal at pressures up to 120 PSI. A high strength adhesive bonds securely to carbon and alloy rim beds yet removes cleanly without residue, reducing service time and preserving rim integrity.

- ▶ **Triple Ply Composite Construction:** High tensile strength with controlled stretch and abrasion resistance.
- ▶ **High Strength Adhesive:** Secure bond to carbon and alloy rim beds with zero residue upon removal.
- ▶ **Pressure Rated to 120 PSU:** Stable for road, gravel, and MTB applications.
- ▶ **Wide Temperature Stability:** Reliable from -20°C to 60°C (-4°F to 140°F).
- ▶ **Professional Finish:** Includes finishing patches for consistent, shop quality installs.
- ▶ **Simplified SKU Strategy:** Two widths cover the majority of modern rim standards.

ULTIMATE TUBELESS VALVES

Ultimate Tubeless Valves are engineered for secure installation and long-term service in modern tubeless systems. A traditional removable Presta core maintains a direct internal air path without internal check valves or moving mechanisms that can restrict airflow or complicate sealant service. A side-channeled base preserves airflow when paired with tire inserts, while precision-machined alloy construction and a 4mm hex interface ensure accurate torque and rim-safe installs across carbon and alloy wheels.

- ▶ **4mm Hex Key Installation:** Positive tool engagement for controlled torque and rim protection.
- ▶ **Insert-Compatible Base:** Side-channel design maintains airflow even when paired with tire inserts.
- ▶ **Standard Presta Cores:** No internal check valves or mechanisms to restrict airflow or complicate sealant injection/service.
- ▶ **Threaded Alloy Cap with Integrated Core Tool:** Always ready for trailside service.
- ▶ **Sized for Modern Rims:** Optimized 50mm and 70mm lengths for most wheel depths.
- ▶ **Low-Profile Lock Nut:** Hex nut with rubber washer protects rim finish and improves sealing.

ULTIMATE INJECTABLE SEALANT

Injectable through your valve, seals a 6mm+ puncture, and lasts up to 6 months. The perfect sealant for those looking for the ultimate sealing power, longevity, and ease of use.

The original sealant formulation, released 2.5 years ago, was designed primarily for effective puncture sealing by maximizing the surface area of the liquid latex for enhanced performance. Pro racers valued its convenience, as they frequently changed tires based on race conditions and could easily pour in fresh sealant without needing to inject it through the valve. However, we heard two main concerns from more casual cyclists—it dried out quickly when not in use, and its composition of the longer strand carbon fiber made injection difficult and problematic, leading to a potentially messy installation if not handled carefully.

Lastly, the old natural latex formula needed a two-step process to stay liquid longer. That second step has been eliminated with our new blend of natural and synthetic latex. SILCA Ultimate Sealant is a one-step process lasting +6 months and still, above all else, sealing punctures on race day.

- ▶ **Sealing Power:** Seals holes up to 6+mm—25% larger than conventional sealants—for reliable performance in varied conditions.
- ▶ **Fiberfoam® Technology:** Small strand single carbon fibers create a strong “fiber dam” for faster sealing with minimal air loss. These fibers are 400% stiffer than fiberglass, ensuring quick, effective puncture protection.
- ▶ **Cold-Weather Performance:** Works in temperatures as low as 10°F / -15°C for all-season reliability.
- ▶ **Long-lasting formula:** Hybrid latex extends durability up to 6+ months (environment-dependent).
- ▶ **Easy Application:** Injects through valve cores for a mess-free installation. Pouring in during tire installation is not mandatory.

v2.0 **Ultimate Sealant**

DIRECTIONS FOR USE

Preparation: Shake well before use.

Installation: Inject directly through valve cores with removable cores or pour into the tire during installation.

Compatibility: Works with all tubeless and tubeless-ready tires and valve cores.

ULTIMATE SEALANT REMOVER

This patented, water-based formula breaks down the molecular bond between the latex and the surface to which it has attached. Safe for frame paint when used as directed. Intended to remove dried latex from all surfaces and your clothing.

- ▷ **Paint Safe** when used with recommended directions for use, this formula does not affect paint or finishes
- ▷ **Biodegradable and Eco-Friendly** this formula is safe for the environment
- ▷ **Helps Remove Dried Latex from Clothing** by breaking the bond between the latex and the surface with the help of a soft brush to remove the latex debris
- ▷ **Breaks down molecular bond of latex and a surface** to become the first line of defense from a sealant spill or spray and helps release the latex-based sealant from any surface

CLEANING + PROTECTION

Advanced cleaning and surface protection chemistry developed to preserve performance and extend equipment life. Formulated to remove contamination while protecting critical components from wear and environmental exposure.

- ☐ BICYCLE SPA COLLECTION BOX SET
- ☐ ULTIMATE BRAKE & DRIVETRAIN CLEANER
- ☐ ULTIMATE BIKE WASH
- ☐ ULTIMATE GRAPHENE SPRAY WAX
- ☐ ULTIMATE CERAMIC WATERLESS WASH
- ☐ SILCA GEAR WIPES

ULTIMATE BRAKE + DRIVETRAIN CLEANER

Using Ultimate Brake + Drivetrain Cleaner is a 3 minute process targeted at brake dust as well as road grime and oils. Simply spray onto brake rotors and drivetrain and watch the magic as the formula turns bright reddish/purple, capturing and converting oils and grime as it runs off. Rinse well. Eliminates brake squeal and will not attack wax on paint or drivetrain!

- ▶ **Encapsulates and removes** oils and grease from the chain and drivetrain within 3 minutes
- ▶ **Resistant to wax** which means it is safe for your waxed chain
- ▶ **Clean rinsing formula** with fresh water to leave your chain and drivetrain sparkling. For oil-based lubes, reapplication will be required
- ▶ **Scent** is Fireball, or cinamon, for those who want to enjoy a little spicy heat with your drivetrain

Bicycle Spa Collection
Step 1: Ultimate Brake & Drivetrain Cleaner

STEP

1

ULTIMATE BIKE WASH

An Eco-friendly bubble bath for your bike. The advanced, concentrated surfactant formula is designed to lift the dirt and grime from your entire bicycle. The foamy bubbles combined with a sponge or microfiber towel, gently clean your investment. The formula rinses clean by encapsulating the dirt/grime, leaving a debris-free surface.

- ▷ **Eco-friendly** formula does not affect our waterways when rinsing away debris. Concentrated surfactant goes a long way with just a capful.
- ▷ **Gentle, but effective** by lifting and encapsulating dirt while you wash to reduce scratching of the surface
- ▷ **Clean rinsing** to leave no residue on your frame, components, drivetrain and more
- ▷ **Cherry** aromatic scent makes the cleaning process more enjoyable

ULTIMATE GRAPHENE SPRAY WAX

Ultimate Spray Wax with Graphene, seals in the clean while adding a nano-scale layer of protection to your paint. Simply spray onto microfiber towel or buff, wipe onto painted surfaces and buff to a shine, you will literally feel the difference! Avoid brakes.

- ▶ **Protects against scuffs and swirl marks** for 90 days and seals in the newly washed frame
- ▶ **Graphene additive** provides a diamond hard layer of wax protection and provides a uniform, slick surface that repels dirt and grime
- ▶ **Margarita** scent does nothing for performance, but does provide a pleasant experience
- ▶ **Final step** of the Bicycle Spa Collection for the initial cleaning process

STEP
3

ULTIMATE CERAMIC WATERLESS WASH

Your daily cleaning solution. Extends the life of the initial cleaning steps with one quick wipe down after every ride. Spray down the frame and remove mild dirt while leaving an additional ceramic coating when combined with the Ultimate Graphene Spray Wax.

Polymeric surfactant lifts and captures dirt so that it can safely be wiped away with no risk to paint. Advances SiO₂ Ceramic wax additive forms micron thick protective layer when dry. Spray onto bicycle avoiding brakes and wipe away, buff to shine. Spray on entire bicycle avoiding brakes and drivetrain. Buff to finish.

- ▶ **Encapsulating formula** attacks the surface to lift the light dirt, dust or debris and removes it with a light microfiber towel
- ▶ **Ceramic wax** adding a protective layer to your frame to repel future dirt
- ▶ **Pina Colada** aromatic scent reminds you to drink responsibly while cleaning your bicycle
- ▶ **Avoid** brakes and drivetrain to reduce any unwanted slipping due to ceramic wax

GEAR WIPES

SILCA Gear Wipes are two-sided, disposable towels designed to remove dirt, grease oils, and sweat from your cycling gear. Each wipe contains a textured scrubbing side for removal of heavy dirt or grime and a soft polishing side for finish cleaning which leaves behind a spotless shine. The wipes use cosmetic grade cleaning agents which are safe for use on hands and skin but contain no lotions or moisturizers which can leave behind streaks or slimy residues.

- ▶ **Proprietary cleaning formula** to remove dirt, grease, oil, sweat, and drink mix from frames, chains, and even hands
- ▶ **Matched with a top-end Kimberly Clark dual surface substrate** to deliver superior performance and stop shredding of a standard disposable towel
- ▶ **Fast evaporating non-solvent based cleaning agent** means you can clean your white bar tape back to looking new without sticky residues left behind by other cleaners
- ▶ **Cosmetic grade cleaning agent** without any lotions or moisturizers to be safe on skin and not leave streaks or residue on your components
- ▶ **Contains a scrubbing and polishing side** instead of a standard double sided wipe that doesn't have the scrubbing ability for particularly dirty frames and components

ASYMMETRICO SEAT ROLL

Asymmetrico is a highly optimized update to the multi award winning Seat Roll Premio. Taking 3 years of user feedback and making more than 100 prototypes, the Asymmetrico, simplifies the packing and rolling of the seat roll, uses lighter weight materials, and adds strategic reinforcement to build a tighter, more compact roll with more capacity than any other

- ▶ **Ultra-compact seat roll** compartmentalizes all your roadside repair gear in a highly organized and visual display
- ▶ **Secured by the BOA® Closure System** that is 15x stronger than Velcro, uses a ratcheting mechanism that will not creep or loosen even under the most extreme vibration and impact
- ▶ **Two-tone colors:** exterior uses a neutral grey that will complement any bicycle and the contrasting red interior creates a highly visual backdrop for the contents
- ▶ **Reflective racing stripe graphic** provides additional safety feature when being approached from behind at night
- ▶ **3M Hypalon Strap** provides additional support to securing the contents and reducing the rattling noises on more intense road conditions
- ▶ **Dual-layer, water resistant material** expels water and debris to keep contents clean and dry for use, as needed

GRINTA 2L-5L ROLL-TOP SADDLE BAG

The cutting-edge BOA® system enhances the the versatility for any sized adventure.

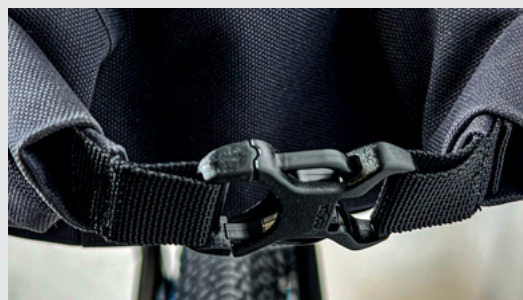

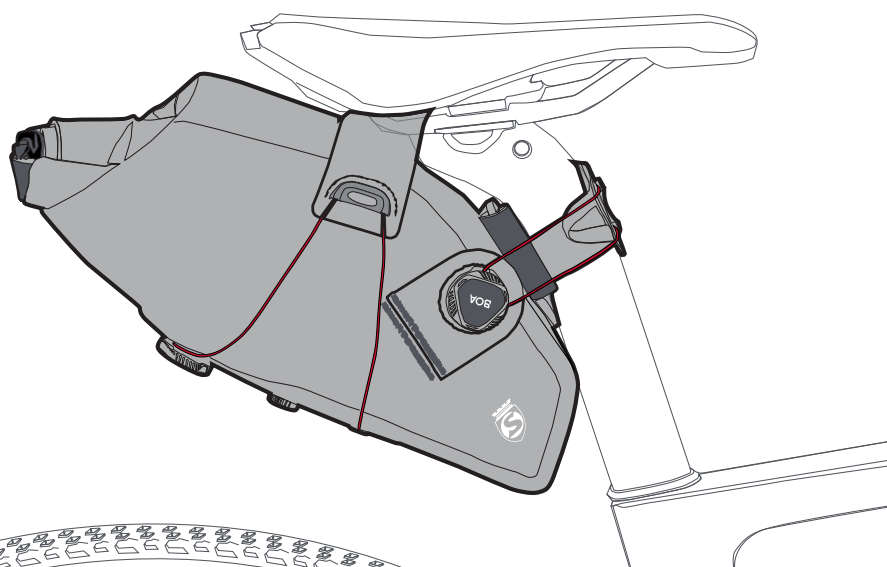

The **Grinta 2L-5L Roll Top Saddle bag** combines the power of the Boa® Closure system with a unique internal frame structure capable of expanding between 2 and 5 liters while maintaining maximum security and stability. The bag combines welded construction and a roll-top design ensuring 100% waterproof performance, and a clever air bleed valve allows excess air to be purged from the bag to minimize bulk. The combination of the internal frame concept and Boa® closure provide significantly improved stability compared to other designs, eliminating the need for external stabilizers or additional straps. Constructed of BLACK 100% CYCLEPET 600D with Kiss Coating. Also the Hypalon strap & BOA® closure system are design details that set this bag up to adapt to whatever comes it's way.

IMPERO ULTIMATE FRAME PUMP 2.0

The perfect roadside option when a mini-pump just takes too long. The classic option for mobile inflation has been updated to use a two stage gasket, leather piston, and has a snug fit on the frame.

- ▶ **A unique 2-stage head gasket** to provide ultimate sealing and holding even when compared to lever chuck designs.
- ▶ **Machined aluminum head with brass check valve** ensures a lifetime of flawless use.
- ▶ **Full aluminum barrel, handle and piston rod** result in a pump that is competitive in weight with plastic designs while being significantly stronger, smoother and more durable.
- ▶ **Unique FlexWing Silicone bumpers** on the head and handle tip are designed to accommodate tubing diameters from 1" (25mm) to 2.5" (64mm). An additional Silicone bumper on the main barrel protects paint, eliminates vibrations and noise, and also acts as a compression lock against the handle to keep it from moving until you use the pump.
- ▶ All IMPERO ULTIMATE frame pumps are **hand assembled** at the SILCA home office using Alcoa Aluminum extrusions and bar stock.

Ep 011: Impero
Frame and
Pocket Pumps

POCKET IMPERO 2.0

Heat is the enemy of mini-pumps. More strokes generate more friction which produces more heat and heat is wasted energy. Unlike most mini-pumps, POCKET IMPERO does not suffer from efficiency loss when hot. POCKET IMPERO is between a high pressure and high-volume pump. At 200 strokes the POCKET IMPERO reaches higher pressures than any other pocketable pump ever tested in the BikeRadar test protocol, meaning that it is pushing more air with fewer losses than pumps of either high pressure, or high-volume designs.

- ▷ **Two stage head gasket** to provide the ultimate seal for easy roadside inflation compared to other locking mechanisms with a lesser hold
- ▷ **Full aluminum barrel, handle, and piston rod** provide a lightweight and much stronger and durable frame pump than the others of plastic on the market
- ▷ **19mm leather piston gasket** to create a highly efficient pump stroke
- ▷ Covered by the **SILCA Shield Warranty** which lasts 25 years and covers your pump in all situations

GRAVELERO

The GRAVELERO mini-pump builds from the same hose, chuck, and plunger design of our multi-award winning Tattico pump, in a package that pushes up to 50% more air from the same overall length. The design has been further refined for gravel and off-road use with a smooth outer texture and improved sealing to reject dirt and mud while also making for easy cleaning.

- ▶ **Full aluminum barrel, handle, and piston rod** provide a lightweight and much stronger and durable mini pump than the other plastics on the market
- ▶ **Retractable hose with thumb-lock chuck** compact design and ease of use makes a roadside repair quick
- ▶ **Reversible chuck** gives flexibility to the use case from schrader to presta valves
- ▶ **80 psi** with more volume per stroke and works well with low pressure and more
- ▶ Covered by the **SILCA Shield Warranty** which lasts 25 years and covers your pump in all situations

TATTICO MINI PUMP

TATTICO is a highly-efficient mini-pump with an ergonomic design that makes it easy to use in all conditions.

- ▶ Uses an **adaptable cup seal** to create a highly efficient pump stroke compared to regular o-rings used in most pumps
- ▶ **Twin Tube Insulated Grip** means the air chamber between the two tubes on the TATTICO keeps your hands cool while pumping to higher road riding pressures
- ▶ **The hidden hose and chuck are extended** to provide a pumps stroke 10% larger than pumps of similar lengths
- ▶ **Capable of reaching 100psi** instead of the standard 70-80psi before pumping becomes extremely difficult and hot to the touch
- ▶ **Comes with a bracket mount** to secure underneath your bottle cage for easy access and storage

Mini Pump

ELETTRICO MICRO MINI INFLATOR

The SILCA Elettrico Micro is a 120g powerhouse that packs the punch of 3+ co2 cartridges on a single charge. With an integrated auto-shutoff at 72 psi it is safe for hookless rims. The ability to attach any SILCA chuck makes inflation easy for every wheel type. Carry-on air travel safe, perfect for on-the-go adventures and destination gravel events.

Perfect for:

Racers & Sport Riders - Compact, fast, and travel-friendly.

Works for Minimalists - Small enough to fit in a jersey pocket or handlebar bag.

Bikepacking & Gravel Events - Air-travel safe and adventure-ready.

Key Features:

Max Pressure: 72 PSI (Automatic Shutoff)

Battery: 7.4V, 400mAh - USB-C rechargeable in just 25 minutes

Weight: 111g (3.91oz) - Lighter than many CO2 regulators

Size: 65 x 46.5 x 28 mm (2.625 x 1.875 x 1.1875 in)

Inflation Performance: Fills up to 3 tires per charge, equal to 3.5 CO2 cartridges

Battery Indicator Light: Green: 80-100% | Yellow: 50-80% | Red: <50%

Air Hose Extension Included - Prevents heat buildup on TPU inner tube valves

Universal Compatibility: Works with Presta & Schrader valves.

ELETTRICO ULTIMATE MINI INFLATOR

The SILCA **Elettrico Ultimate** is a 220g powerhouse that packs the punch of 9+ CO2 cartridges on a single charge. Digitally adjustable 3-100 PSI auto cut off with 1% accuracy. The ability to attach any SILCA chuck makes inflation easy for every wheel type. Air travel safe, perfect for on-the-go adventures and destination gravel events.

Key Features:

Max Pressure: 100 PSI - Digitally adjustable in 1 PSI increments

Battery: 11.1V, 600mAh - USB-C rechargeable in 1 hour

Weight & Size: 222g (7.83oz) 81x60x32 mm (3.18x2.36x1.25 in)

Inflation Performance: Fills up to 8-9 road tires or 3-5 gravel/MTB tires per charge, equal to 9+ CO2 cartridges

Protective Auto Shutoff: Overheating prevention & "HOT" warning displayed if needed

Failsafe Protection: Automatically shuts off if pressure remains below 5 PSI for 1 minute

Universal Compatibility: Works with Presta directly, adapter included for Schrader valves.

Perfect for:

Pro Mechanics & Shop Use - Digital PSI control eliminates guesswork.

Gravel & Adventure Riders

- High-capacity inflation in a compact form.

Racer Support - Fast, precise tire pressure adjustments on the go.

Schrader & Hiro Locking

Air Chucks (sold separately).

ULTIMATE SHOCK PUMP

Designed from the ground up for riders who demand long-term accuracy and reliability, the SILCA **Ultimate Shock Pump** brings precision and durability to MTB and gravel suspension service. Built with fully CNC-machined aluminum construction, a rotating analog gauge, and a zero-loss chuck, it's made to deliver consistent performance ride after ride—and season after season.

- ▶ Fully CNC-machined aluminum construction—no plastic or cast parts
- ▶ Rotating analog gauge (2") with $\pm 2\%$ accuracy & 5 PSI increments
- ▶ Zero-loss chuck design with stainless and aluminum internals
- ▶ 10,000 PSI-rated stainless overbraided Kevlar hose
- ▶ User-replaceable gauge—no glue or threadlock required
- ▶ Integrated bleed valve for fine-tuning pressure
- ▶ Schrader-only compatibility for air suspension forks & shocks
- ▶ Fully rebuildable for long-term value
- ▶ Mechanical-only—no batteries or digital screens

HIRO SIDE-LEVER LOCKING PRESTA CHUCK

A locking Presta valve chuck that stays securely connected at 220+psi for road and track situations, allowing both hands to remain on the pump handle.

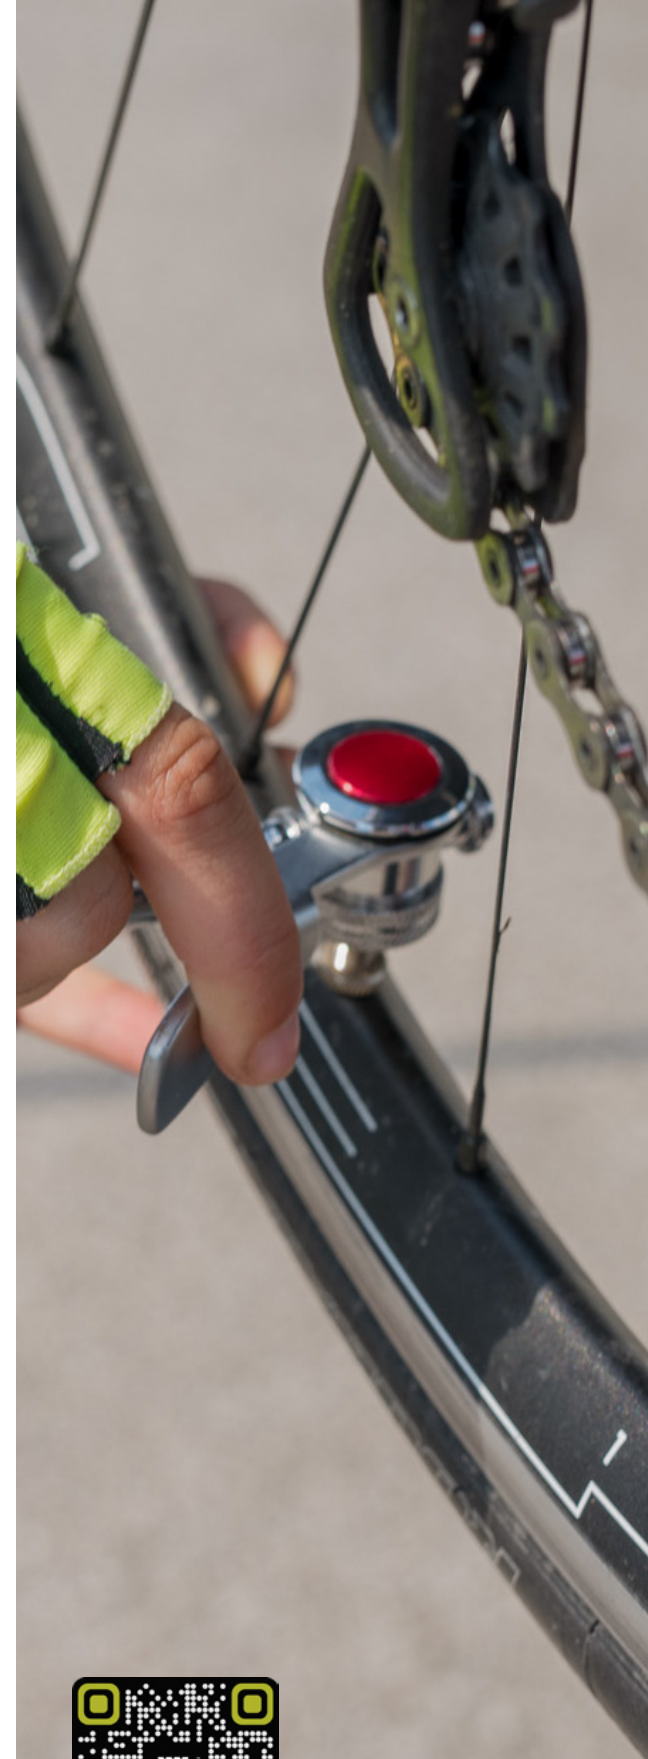

- ▷ **Full metal construction** and covered for 25 years unlike other chucks that use plastic
- ▷ **Disc wheel compatible** and able to hold pressures of over 200 psi to be used on all applications
- ▷ **Effectively seals on valve stems with as little as 10mm exposed valve** compared to the standard 15-20 mm of valve needed
- ▷ **Adjustable pre-load** to allow for custom fit and compensation for gasket wear
- ▷ **Highly-effective locking mechanism** frees up both hands to use on the pump rather than needing to use one hand to hold the chuck on the wheel like most chucks

TOOLS

Professional grade tools developed to support modern bicycle service. Designed for mechanical precision, durability, and long term reliability in both retail and home workshop environments.

- ☐ HIROBEL FRAME CLAMP
- ☐ HX-ONE HOME ESSENTIALS KIT
- ☐ HX-TWO TRAVEL KIT
- ☐ T-HANDLE FOLIO
- ☐ ITALIAN ARMY KNIFE TREDICI
- ☐ ITALIAN ARMY KNIFE VENTI
- ☐ ITALIAN ARMY KNIFE NOVI

HIROBEL FRAME CLAMP

Hirobel is a specially designed clamp for bicycle repair stands which makes it easier to work on your bike. It better distributes stresses and loads through the bicycle frame, offering superior stability while eliminating possible crushing or damage to thin-walled and shaped tubing.

- ▶ **Clamps almost any frame** in your workstand without risking damage to carbon frames, aero tubes, or dropper posts like standard clamps on the market
- ▶ **Distributes stress load over a much larger area** to not concentrate all of the stress on your seat tube when clamping a bike by the seat post to eliminate the risk of damage
- ▶ **Adjustable, paint-friendly cones** allow you to adjust to any sized frame to create a safe hassle-free platform to perform maintenance and repairs
- ▶ **Unique cone and strap design** eliminates any possibility of crushing lightweight carbon frames compared to the standard work stand clamp that was designed for 1.25" round steel tubing
- ▶ **Reduces bouncing of bike** during heavier work to create a more stable platform to perform maintenance at better angles to reduce back strain over a standard workstand

HX-ONE HOME ESSENTIALS KIT

A complete set of precision S2 steel hex wrenches and bit drivers stored in a fully CNC machined Beechwood carrying case.

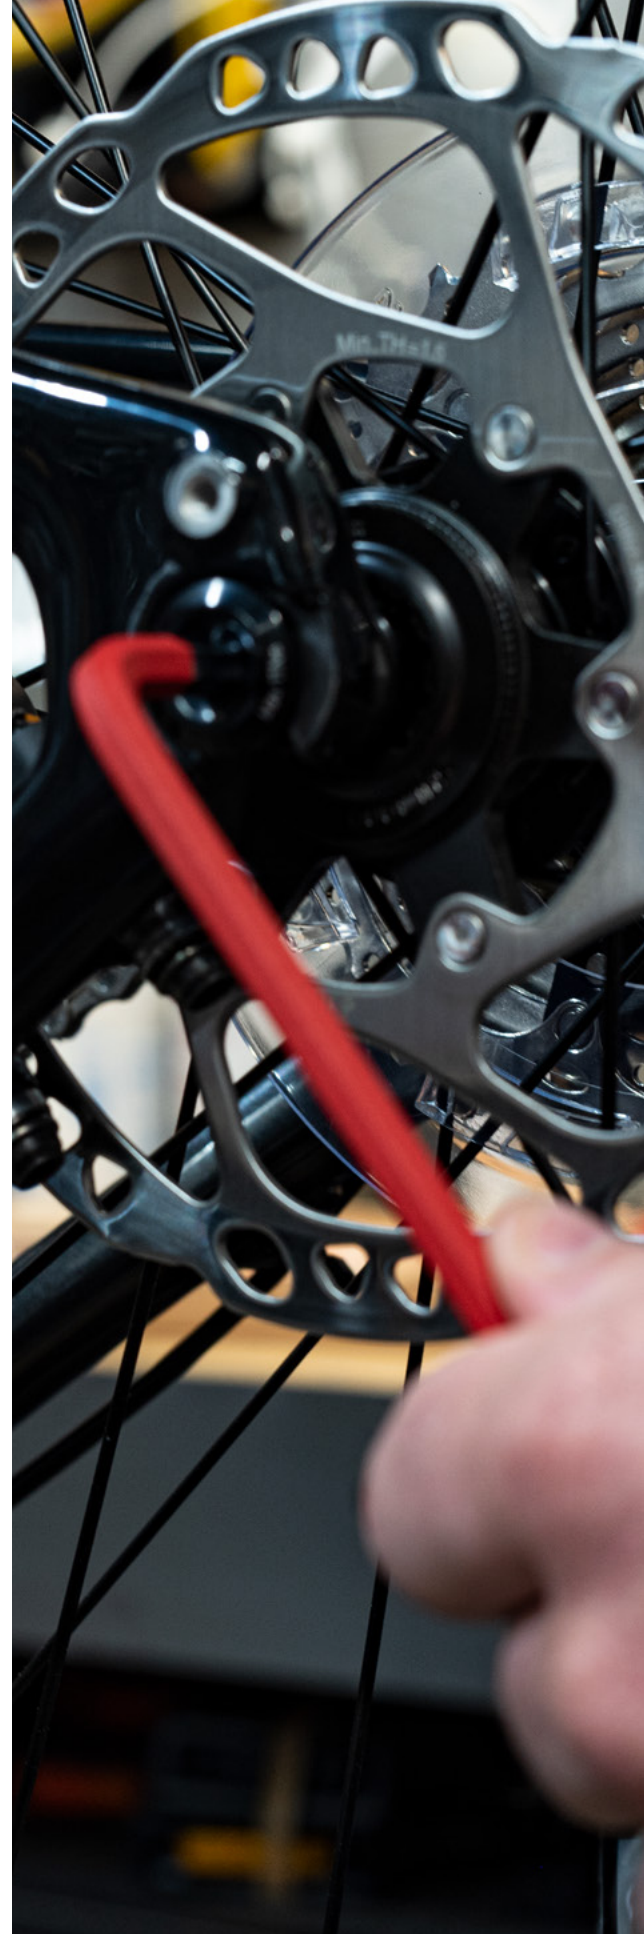

- ▷ **S2 Tool Steel** to create a highly precise and hardened steel hex wrench
- ▷ **CNC Machined Beechwood** carrying case that gives a great impression instead of a simple plastic sleeve
- ▷ **All allen, torx, and screw driver bits** you might need to work on all of your bikes
- ▷ **Textured polymer finish** to create a non-slip grip while still keeping the chrome finish on the head itself to balance high performance and great style
- ▷ **Custom S2 stainless steel bit adapter** turns the 6mm into a standard 1/4" bit

HX-TWO TRAVEL KIT

The perfect complete set of S2 Steel Allen and Torx keys for when you are on the go. In a tidy carrier, always have every Allen and Torx key you may need.

Few tools are used as frequently and can cause as much heartache or wasted time as the seemingly simple Hex and Torx® keys. It's one of the first things you notice at the top levels of motorsport tools, or in the toolboxes of Pro-Tour mechanics: extremely high-quality tools. The reasoning is simple, better tool fit leads to better feel and confidence for the mechanic as well as a significant reduction in the likelihood of damaging exotic fasteners made from Titanium or Aluminum.

- High strength S2 steel tools
- Precise tool interface
- Polymer coating for superior grip
- Compact tool holder
- H1.5, H2, H2.5, H3, H4, H5, H6, H8, H10
- T7, T8, T9, T10, T15, T20, T25, T27, T30
- T7 tool features 100 degree bend rather than 90 for improved control and access to very small fasteners

T-HANDLE FOLIO

Over a year of development went into these tools and bag based on feedback from pro mechanics, pro cyclists and amateurs alike. We studied fits, tolerances, use cases, ergonomics and finishes to ensure that this heirloom quality kit will provide a lifetime of joy.

We've specifically designed these tools around use cases we are all familiar with: Stuck 8mm pedal? Nothing gives you more leverage with less overhang than the SILCA sliding 8mm. Campy Ultra Torque crank bolt? The ONLY sliding 10mm T-Handle around to the rescue with perfect fit, deep reach, and integrated fastener stop, the SILCA sliding T makes tightening and loosening a breeze.

SPECIFICATIONS

- 2, 2.5, 3, 4, 5, 6, 8, 10mm Hex Sliding T-Handle Tools
- T25, T30 Torx® Sliding T-Handle Tools
- T-Handle Premio Waxed Canvas Bag
- Lifetime Warranty

\$185

ITALIAN ARMY KNIFE TREDICI

The lightweight option for when you need a few more tools for your roadside repair.

- Aluminum sides with integrated masterlink storage
- Hex: 2, 2.5, 3, 4, 5, 6, and 8mm
- T10, T20, T25, PH2, PH Flat, and disc pad spreader
- 8mm cap connects to 5mm for optimal use of space
- 105g

The mid-length tool design is long enough to provide access to recessed fasteners, but short enough not to experience twist or damage under moderate torque as can happen on longer tools. All tools are forged rather than bent from hex stock. While this method of construction is more expensive, the value is unquestioned during a road-side repair. Mid-length tools also allow us to position the tools within the same plane, reducing the thickness of the overall package by half. Double chromed tools and fully stainless steel hardware and bushings guarantee a long life without corrosion (the number 1 killer of multi-tools is corrosion). Forged aluminum sidebars contain rare-earth magnets for holding a spare chain connector.

\$45

ITALIAN ARMY KNIFE VENTI

The unique magnetic slide-lock design of the VENTI chain-tool allows it to be more than twice as long as other designs for exceptional ergonomics in use, while also allowing it to be removed completely from the tool for improved functionality. The forged mid-length tools are long enough to reach all common cycling fasteners, but not so long that they twist or deform under load. The ergonomic side plates also hold a discreet magnetic storage feature for a spare master link and all tools are coated with SILCA's unique high-grip chrome plating which provides better torque transfer at the bolt interface.

- 160g
- 80x46x14mm
- 13g/15g spoke wrenches
- Valve core remover
- Disc pad spreader
- 10mm open end wrench
- 8mm flare nut wrench
- 7mm box wrench
- Phillips #2/SL4
- Torx: 8, 10, 20, 25
- Torx: 8, 10, 20, 25
- Hex 2, 2.5, 3, 4, 5, 6, and 8mm cap
- Forged chain breaker for 10-12s chains
- Magnetic masterlink storage
- Forged and plated steel tools

3D PRINTING

Additive manufactured titanium components engineered for strength, precision, and weight efficiency. Advanced 3D printing processes enable complex geometries that improve fit, performance, and durability.

- ☐ **SILCA CHISELA COMPUTER MOUNTS**
- ☐ **SILCA TITANIUM DERAILLEUR HANGERS**
- ☐ **SILCA TITANIUM RACE DAY CLEATS**

CHISELA COMPUTER MOUNT

CHISELA is the world's smartest computer mount, designed by the wind and manufactured in 6Al/4V Titanium by lasers. Each CHISELA is designed for your specific stem face-plate geometry, ensuring minimum weight and maximum strength and improved aerodynamics over the previous computer mount solutions.

- ▶ **3D Printed in 6Al/4V Titanium** which allows the computer mount to be strong and lightweight
- ▶ **Garmin and Wahoo computer compatible** each 'puck' is provided to fit either compatible computer options
- ▶ **Accessory Mount**, each CHISELA computer mount has a removable mount and includes hardware to make it permanent. Used for video or lights
- ▶ **10 - 15% lighter than aluminum mounts** the use of titanium reduces the weight of the mount, when weight matters, and it always does

TITANIUM DERAILLEUR HANGERS

SILCA 3D printed titanium derailleur hangers bring increased strength and stiffness to this overlooked component so critical to quick and precise shifting.

Modern electronic derailleurs shift so fast, and with such force, that conventional hangers made from low grade aluminum plate will flex up to 4 degrees during a shift resulting in less precise and slower shifting. Using advanced 3D modeling with AI generated structural infill, SILCA 3DP Hangers are 5-7x stiffer than aluminum hangers while also being 2-6 grams lighter depending on model.

For Shimano Direct Mount compatibility the SILCA 3DP Direct Mount Hangers offer 8-12x higher stiffness with 4-10 gram weight savings by eliminating the use of the direct mount link from the assembly.

Already in use at the World Tour level SILCA 3DP Hangers were utilized in 2 stage wins of the 2023 Tour de France and are credited with maintaining derailleur alignment across numerous crashes.

SILCA 3DP Hangers are able to be aligned by hand, and are designed with an internal fracture notch which allows the hanger to fracture and bend below the point of damage for the carbon frame to eliminate the risk of frame damage under the hardest of impacts.

BENEFITS

- Improved shifting speed and precision with reduced noise
- Reduced need to align hanger or adjust derailleur after minor impacts
- 2-10 gram weight savings depending on model and fitment
- Frame saving fracture notch design allows the hanger to become sacrificial under the hardest of impacts

TITANIUM RACE-DAY CLEATS

Elevate your race day experience with these lightweight, high-performance cleats that are designed to give you the competitive edge you need.

- ▶ **3D Printed in 6/4 Titanium** is a remarkable 2.25 times stronger and 3 times tougher than brass or mild steel
- ▶ **Matched durability** means that you can expect 300-400% wear life compared to traditional materials
- ▶ **Internal lattice structure (called a gyroid)** maintains stiffness and strength while reducing weight to create a cleat set that is HALF the weight of a standard cleat set
- ▶ **Light-weight** and weighs in at 25-30 grams per set of cleats, which can be significant over time, particularly in CX events where running is crucial. 25gm reduction x 100 rpm = 180kg of mass not lifted per hour of riding, 90kg per leg!

NASTRO CUSCINO 3.75 MM BAR TAPE

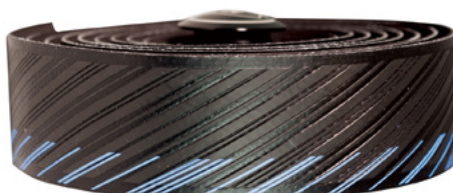

NASTRO CUSCINO is a 3.75 mm thick tape that provides cushioning and comfort equivalent to 4.5 mm tapes of existing technologies. CUSCINO has a highly graphic texture with ultra tackiness which adds comfort and grip in both wet and dusty conditions.

- ▶ **3.75 mm thick tape with advanced tri-laminate design** delivering cushioning equivalent to 4.5 mm tape allowing better grip and comfort without the added bulk of other tapes
- ▶ **Fully adhesive, butterfly-shaped brake clamp cover** rather than the standard 3" extra piece of tape that causes extra bulk
- ▶ **Debossed pattern with embossed silicone printing** for improved cushioning and grip so you don't need to worry about grip in wet or dry conditions
- ▶ **Aluminum expanding bar-end plug** providing much more security over standard plastic bar-end plug
- ▶ **Tri-laminate construction** offers a longer lasting, softer, and more comfortable feel across wet and dry conditions compare to typical foam extrusion

NASTRO PILOTI BAR TAPE

SILCA NASTRO PILOTI is a 1.85mm thick tape for aggressive riding and racing which provides cushioning equivalent to 2.5mm thick tapes of existing technology. The Asymmetric PILOTI Texture inspired by F1 tire technology allows the tape to be wrapped in either a moderate texture or high texture format depending on preference.

- ▶ **1.85mm thick tape with advanced tri-laminate design** delivering cushioning equivalent to 2.5mm tape allowing better grip and comfort without the added bulk of other tapes
- ▶ **Fully adhesive butterfly shaped brake clamp** cover rather than the standard 3" extra piece of tape that causes extra bulk
- ▶ **Dual-Tread deboss with high grip** and max grip directions instead of standard one grip application
- ▶ **SILCAthane and SILCALon Laminate** to create a high grip tape in wet and dry conditions. No more need to worry about slipping hands on those rainy or sweaty rides
- ▶ **Aluminum expanding bar-end plug** providing much more security over standard plastic bar-end plug

AERO TALL SOCKS

SILCA Tall Aero socks have three additional centimeters in height from our Everyday Aero Socks. They are knitted from Q-Skin, a silver ion infused polyamide which is anti-bacterial, odor resistant, and more importantly, has better softness and moisture control than any of the yarns commonly used to knit socks. Not only are these socks fast, they're the most comfortable sock you've ever worn.

- ▶ **Turbulators can save 4-8w** over traditional socks with improve airflow around the leg for better aerodynamics
- ▶ **Q-skin knitting** is antimicrobial to reduce bacterial build and odor [material: 95% polyamide - 5% elastane]
- ▶ **No toe seam** reducing friction in the toe box, providing additional comfort
- ▶ **19 cm height**, falling within the UCI regulations, provides a higher shin coverage than the Everyday Aero Sock with additional turbulators to accommodate the coverage
- ▶ **Made in Italy** with latest the knitting technology for a superb finish and consistent quality

GRAVEL WOOL SOCKS

Keep your feet warm on the coldest of days without changing the fit of your shoe. Extra material in the toe box and an equal amount removed from the heel keeps your foot warm and comfortable in the worst of conditions.

- ▶ **Merino Wool and Antibacterial QSkin yarns** provides comfort and warm while wicking away an sweat or moisture that can be uncomfortable during a ride
- ▶ **Extra Insulated** within the toe box is adding warmth where you need it resolving the cold toes issue during the winter months
- ▶ **Thinner Yarn in the Heel Section** helps maintain shoe fit and keeps perfect foot position to reduce friction or hot spots
- ▶ **Perfect for Gravel or Winter Months** due to their wicking properties, these wool socks reduce post-ride foot issues and can keep you comfortable on the ride longer
- ▶ 70% **Merino Wool**, 25% Polyamide, 5% Elastane
