

KALI
PROTECTIVES

2025 COLLECTION

DRIVEN TO PROTECT. POWERED BY INNOVATION. ALWAYS MOVING FORWARD.

As we reflect on 2024, it's clear this year brought its share of challenges—but it also reaffirmed our resilience, adaptability, and passion for what we do. Together, we've embraced opportunities to innovate, pushed the boundaries of head and body protection, and remained steadfast in our mission to safeguard riders around the world. Each new hurdle reminded us of the strength of our community, the dedication of our team, and the trust our riders place in us every day.

Looking ahead to 2025, we see endless opportunities on the horizon. This year, we're committed to driving further innovation in our products, focusing on the safety and sustainability that define us.

We will continue to invest in our team, growing stronger together and fostering a culture of collaboration, creativity, and excellence. And above all, we will stay true to the values that guide us—delivering the kind of trust, reliability, and passion that our community deserves.

As we enter this new year, we're reminded that Kali Protectives isn't just about gear; it's about the people—riders, partners, and teammates—who inspire and motivate us to do better every single day. You are at the heart of what we do, and we are grateful to have you along on this journey.

Here's to a new year filled with progress, innovation, and adventures together. Let's make 2025 our best and most impactful year yet.

Sincerely,

A handwritten signature in black ink that reads "BRAD WALDRON". The signature is stylized and cursive.

Brad Waldron

COMPREHENSIVE PROTECTION STRATEGY

When we design our helmets, we take into consideration all types of crash scenarios – from twisting and turning, to rotational and sideways, and especially the types of accidents that are indescribable. We account for impacts of all shapes and sizes. As a matter of fact, this is what keeps Kali Protectives founder, Brad Waldron, awake at night.

We realize there are a lot of “trends” and “buzzwords” saturating the bicycle industry and helmets are not immune to this manufacturing approach, but Kali has no interest in integrating technology into our helmets simply to create a marketing opportunity, follow a trend, or sticker our boxes with fancy terminology.

Our strategy is to constantly be rethinking, reworking, and testing to make sure our helmets keep your brain as safe as possible as well as stay up with the latest style trends. The goal is to create the safest helmets on the market, so you have peace of mind while out on your favorite roads, trails, and jumps.

We strive to keep pushing the envelope with the best designs and materials and to implement useful protection into all of our helmets regardless of their intended use or price-point.

LCR

LIFETIME CRASH REPLACEMENT

You crash it. We replace it. It's that simple.

We don't do this as a marketing stunt or because we have lost our minds.

We do this because what we learn from crashed helmets informs everything we do. We have you return your crashed helmets so we can take them back into our lab to cut them open, measure them, and dissect them. We then use the information we gather from the unlucky few who test our helmets in ways we cannot recreate to build the next generation of Kali helmets. Of course, we prefer you never have to use the Lifetime Crash Replacement policy and suggest you replace your Kali helmets at respectable intervals. Let us reiterate once again, please leave the testing to us.

OUR PHILOSOPHY

At Kali, our commitment to excellence extends beyond just our products—it's a philosophy ingrained in everything we do. We prioritize the highest quality materials, conducting rigorous safety testing across global labs to ensure unbiased results. From pioneering advanced technologies to innovating new processes, we're relentless in our pursuit of addressing all dimensions of impact—linear, rotational, and low G—because better protection means safer rides for everyone.

LOW DENSITY LAYER (LDL)

Specially designed gel padding placed throughout the interior of the helmet. Reduces rotation impact forces up to 25%, reduces low-g linear forces up to 30%.

LOW DENSITY LAYER (LDL) — ERT

Our proprietary LDL layer specially designed gel padding placed throughout the interior of the helmet. Reduces rotation impact forces up to 25%, reduces low-g linear forces up to 30%.

SUPERVENTS

SuperVents is a part of the construction process which allows us to use larger airflow vents, while maintaining structural integrity.

NANO FUSION

Combines multi-density EPS foam and dual direction geometric cone shapes. Interior and exterior impact energy management.

COMPOSITE FUSION

In-molding technology merging the shell and EPS foam liner. Better impact energy management, increased dynamic range - smaller, lighter and stronger.

COMPOSITE FUSION PLUS

Incorporates layers of multi-density cone shaped EPS foam, reduces impact g-forces up to 25%.

COMPOSITE FUSION SQUARED

Combines multi-density EPS foam and dual direction geometric cone shapes. Interior and exterior impact energy management.
