

KASK

ABOUT

Your safety is in our nature.

Since 2004, KASK has been developing and creating products that combine excellence and safety with innovative and unmistakable design. Constantly engaged in technological research to further improve the quality of its helmets and raise its production standards, KASK guarantees customers a wide range of products that meet the highest safety requirements.

In addition to the extraordinary quality of the materials used and their unmistakable style, KASK products are distinguished by perfect ergonomics and guarantee unparalleled comfort, even in the most extreme conditions.

Comfort, Safety, Design: following these principles, KASK has set the quality standards of the CSD Project. The design and features of all KASK collections are innovative, proprietary, and protected by numerous patents.

ABOUT

Made in Italy

All KASK products are exclusively developed and manufactured in Italy to ensure the utmost quality and provide top-tier protective helmets for our discerning customers. We are dedicated to upholding the highest standards in helmet production, and maintaining full control over the entire production process is essential to delivering an excellent product.

KASK ROTATIONAL IMPACT WG11 TEST

KASK has always been committed to creating products that provide both excellent safety and comfort, exceeding requirements set by international standards and norms.

KASK Rotational Impact WG11 Test is an internal protocol adopted by KASK to identify an objective method, based on scientific sources, for measuring the performance of its helmets against rotational impacts.

Most helmets tests use rotational impact prevention technologies with headforms that have a higher coefficient of friction than those of the human skull and therefore may not reflect what occurs in some accidents.

The “pass-fail” criterion is based on the BrIC value, an algorithm that defines the level of brain injury. This value must be lower than 0,68.

The final test protocol is:

OBLIQUE IMPACT TESTS

- oblique tests @ 45°, impact speed 6 m/s, BrIC < 0,68
- + grade 80 closed-coat aluminum oxide abrasive paper
- + headform nominal coefficient of friction 0,3
- + wireless system: triaxial accelerometer + n. 3 ARS

Headform: EN960 serie

Measurements:

Peak of rotational acceleration, Peak of linear acceleration, HIC, BRIC (< 0,68)

All KASK helmets successfully pass this test, with values that are substantially less than 0,68 BrIC 0,390.

*ROTATIONAL IMPACT WG11 TEST PASSED is a KASK registered trademark. The ROTATIONAL IMPACT TEST PASSED is a KASK internal oblique impact test that measures the performance of its helmets against rotational impacts. This Test has not been adopted by CEN or its Working Group CEN TC158/Working Group 11.

0.68

BrIC peak value (Brain Injury Criteria)

The BrIC value is an algorithm that defines the typical level of brain injury. This value must be lower than 0.68 – the lower, the better.

0.39

Our BrIC value is never above 0.39.

**LAB TESTED.
ROAD APPROVED.**

 **6 m/s**

Rotational impact tested

Based on science and realistic impact scenarios, we test all our helmets for rotational impact reduction at a minimum speed of 6 m/s.

ROAD

INEOS Grenadiers

The INEOS Grenadiers, formerly known as Team Sky, are the most successful cycling team in the world. KASK has been a partner of the team since its inception in 2010. To date, the team has claimed seven editions of Tour de France, three Giro d'Italia, two Vuelta a España, and has achieved more than 500 race victories.

FEATURES

MULTIPOD
An isotropic material that allows better management of rotational impact energy and increases ventilation. It behaves in the same way when a force is applied to it from any direction and it can reduce the shear stress between the head and the inside of the helmet.

OCTOFIT+
The new overinjected rubber dial provides improved finger grip. The vertical stabiliser has been redesigned for greater stability providing a customised fit for riders with longer hair. The ergonomic neck support ensures a fast and secure fit against the back of the head.

FLUID CARBON
A new composite material that allows to reduces the thickness of EPS from the inner shell, in order to improve ventilation and aerodynamics. It also generates a better energy distribution in case of an impact and guarantees a low friction surface between the helmet and the impact surface.

HYVENT
The structure and design of the shell implement the air flow and break up the exchangeable heat.

WINTER CAP

CPA00021

The KASK merino wool Winter Cap acts as a helmet base layer to protect the head from wind chill, keeping you toasty for the coldest winter rides.

The internal padding in Merino wool keeps the body temperature stable, ensures high breathability, and dries quickly. External fabric in Tekseries guarantees a significant resistance to cold and wind combined with a high level of transpiration and resistance to water. To wear the winter cap just remove the inner padding of the helmet and make the cap adhere to the Velcro.

The Winter cap is available in three sizes and is compatible with most of our helmets across the range.

LIMELIGHT

CAC00014

Limelight is a wide and visible rear LED light, designed by KASK to increase visibility and safety on the road. It is easy to assemble by using a clip attachment and there are 5 types of signals available, with a maximum duration of approximately 11 hours in flashing high mode. Limelight features a rechargeable li-po battery, with a USB C cable included, and a low battery level indicator.

The Limelight support can be applied to the helmet with an extra-strong adhesive sticker already provided. Limelight is compatible with all our urban helmets.

INTERNAL PAD

Every KASK helmet internal pad is antistatic, bacteriostatic, heat-regulating, and moisture-transferring. When internal pads are worn out, it's possible to get a replacement pad set, a specific one for every KASK helmet. Each replacement pad set is easy to install, by simply attaching it to the helmet's Velcro sections.
