# SIM

Our Inventory Management platform

Converting the Data to an Easily seen and understood format is the secret to the acceptance of any Operation management System

A good system is defined by the Actionable reports available to the Operator

- Color coded Collection/delivery page provides a visual display of ontime/delayed service

- Segregation data is meant to provide granular data at each customer location

- Tranportation section provides performance tracking for each vehicle

- Processing is custom data/screens made for each business
