ADVANCED FEATURES

RELIABLE STRENGTH & DURABILITY

PRESSURE REGULATED BODY

Reduces high incoming pressure to prevent misting and allows nozzles to operate at peak efficiency. Lower pressure produces larger water droplets that fight the effects of wind.

PGP Ultra 10 cm, I-20 10 and 15 cm

STAINLESS STEEL RISER

For unforgiving soil conditions, unpredictable climates, or heavy foot traffic, stainless steel is the best choice.

Standard on I-40
Optional on I-20 and I-25

DRAIN CHECK VALVE

The drain check valve keeps lines from draining when the system is shut off. This saves water, reduces liability, and increases system life.

PGJ, PGP Ultra, I-20, I-25, I-40, I-90

VALUE-ADDED OPTIONS

OPPOSING NOZZLE 360° MODEL

The opposing nozzle design offers excellent water distribution. With primary and secondary nozzles on opposing sides of the turret, streams arc in opposite directions as the sprinkler rotates for outstanding mid-range and close-in watering.

I-40, I-90

EASY IN-THE-FIELD IDENTIFICATION

OPTIONAL RECLAIMED WATER ID

Purple caps indicate where non-potable irrigation water is being used.

PGJ, PGP® Ultra, I-20, I-25, I-40, I-90

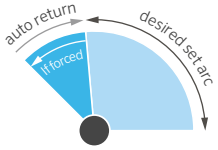
COLOUR-CODED NOZZLES

Nozzles are easier to differentiate in the field for simple installation and quick organisation.

I-25, I-40, I-90

EASY AS-NEEDED ADJUSTMENTS

AUTOMATIC ARC RETURN & NON-STRIPPABLE DRIVE



This patented feature returns the turret to the original arc regardless of where it is turned. The non-strippable drive mechanism is protected from damage, ensuring protection from vandalism.

PGP Ultra, I-20, I-25, I-40

FLOSTOP® CONTROL

FloStop closes the flow of water from individual sprinkler heads while the system is running. This is ideal for changing nozzles or turning off specific heads during maintenance and construction.

I-20

HEADED AND SLOTTED SET SCREW

Use a slotted screwdriver or the Hunter wrench for easier and simpler adjustments as needed.

While ST Rotors are specifically designed for cleaning and cooling synthetic turf sports fields, they are also great for other applications such as pastures, horse arenas, dust control and even casual natural turf areas.

INSIDE THE ST SYSTEM

Open access to all components for ease of ongoing maintenance

FROM THE TOP

Smooth and safe surface area with quick-access ports

SEAMLESS INTEGRATION

Blends in perfectly with the surrounding synthetic surface

ST VAULTS

Heavy-duty tapered fiberglass and polymer-concrete construction with pre-cast holes for rotor, quick coupler valve, and remote manifold assembly.

Quick-couplers provide a convenient source of water for washing down spills and water-soluble paint. Integrated in-vault design eliminates the need for additional quick-coupler enclosures.

The ST-V30KV valve kit includes a remotely located On-Off-Auto selector and solenoid manifold assembly. These convenient features bring valve manual control functions and solenoid splice connections closer to the surface for easy access.

SIMPLE TO SPECIFY,
Easy to Install and Maintain

The Hunter ST System is the first and only cost-effective integrated solution designed to exceed the unique and specific needs of the synthetic turf irrigation market. The core of the Hunter ST System features our gear-driven long-range rotors. Coupled with the heavy-duty manifold assembly, low-pressure loss valves, and robust, feature-packed enclosures, they provide the ultimate in installation flexibility and long-term total access to all irrigation components, including the manifold's point of connection. Such complete access is an absolute must when the surrounding synthetic surface is not easily excavated and restored to original condition without huge expense, specialised equipment and complicated procedures. For the most complete and highest quality synthetic turf watering solution, look no further than the Hunter ST System.

SECTION 02:

MP ROTATOR®

ADVANCED FEATURES

AUTOMATIC MATCHED PRECIPITATION

The MP Rotator® has the unique ability to control the amount of water flowing through the nozzle at various arc and radius settings, resulting in matched precipitation regardless of the nozzle setting.

DOUBLE-POP

The MP Rotator's nozzle pops up from its protected position only after the riser is fully extended, providing superior defence against dirt and debris.

DISTRIBUTION UNIFORMITY

The various streams of the MP Rotator allow it to target all areas of the landscape evenly, yielding superior uniformity over traditional spray nozzles. Each stream targets specific areas to achieve higher efficiency and even coverage.

LOW PRECIPITATION RATE

Since the vast majority of soils have an infiltration rate of less than 25 mm/hr, irrigating at a low precipitation rate is essential to achieve efficiency.

The standard MP Rotator line applies water at 10 mm/hr, while the MP800 Series has a precipitation rate of 20 mm/hr. Either choice will avoid runoff, saving water and preventing erosion.

MP800 SERIES

Achieve efficient irrigation in narrow spaces with the MP800 Series. MP800 Series allows for radius adjustment down to 1.8 m, providing opportunity for overhead irrigation in smaller spaces than ever before possible.

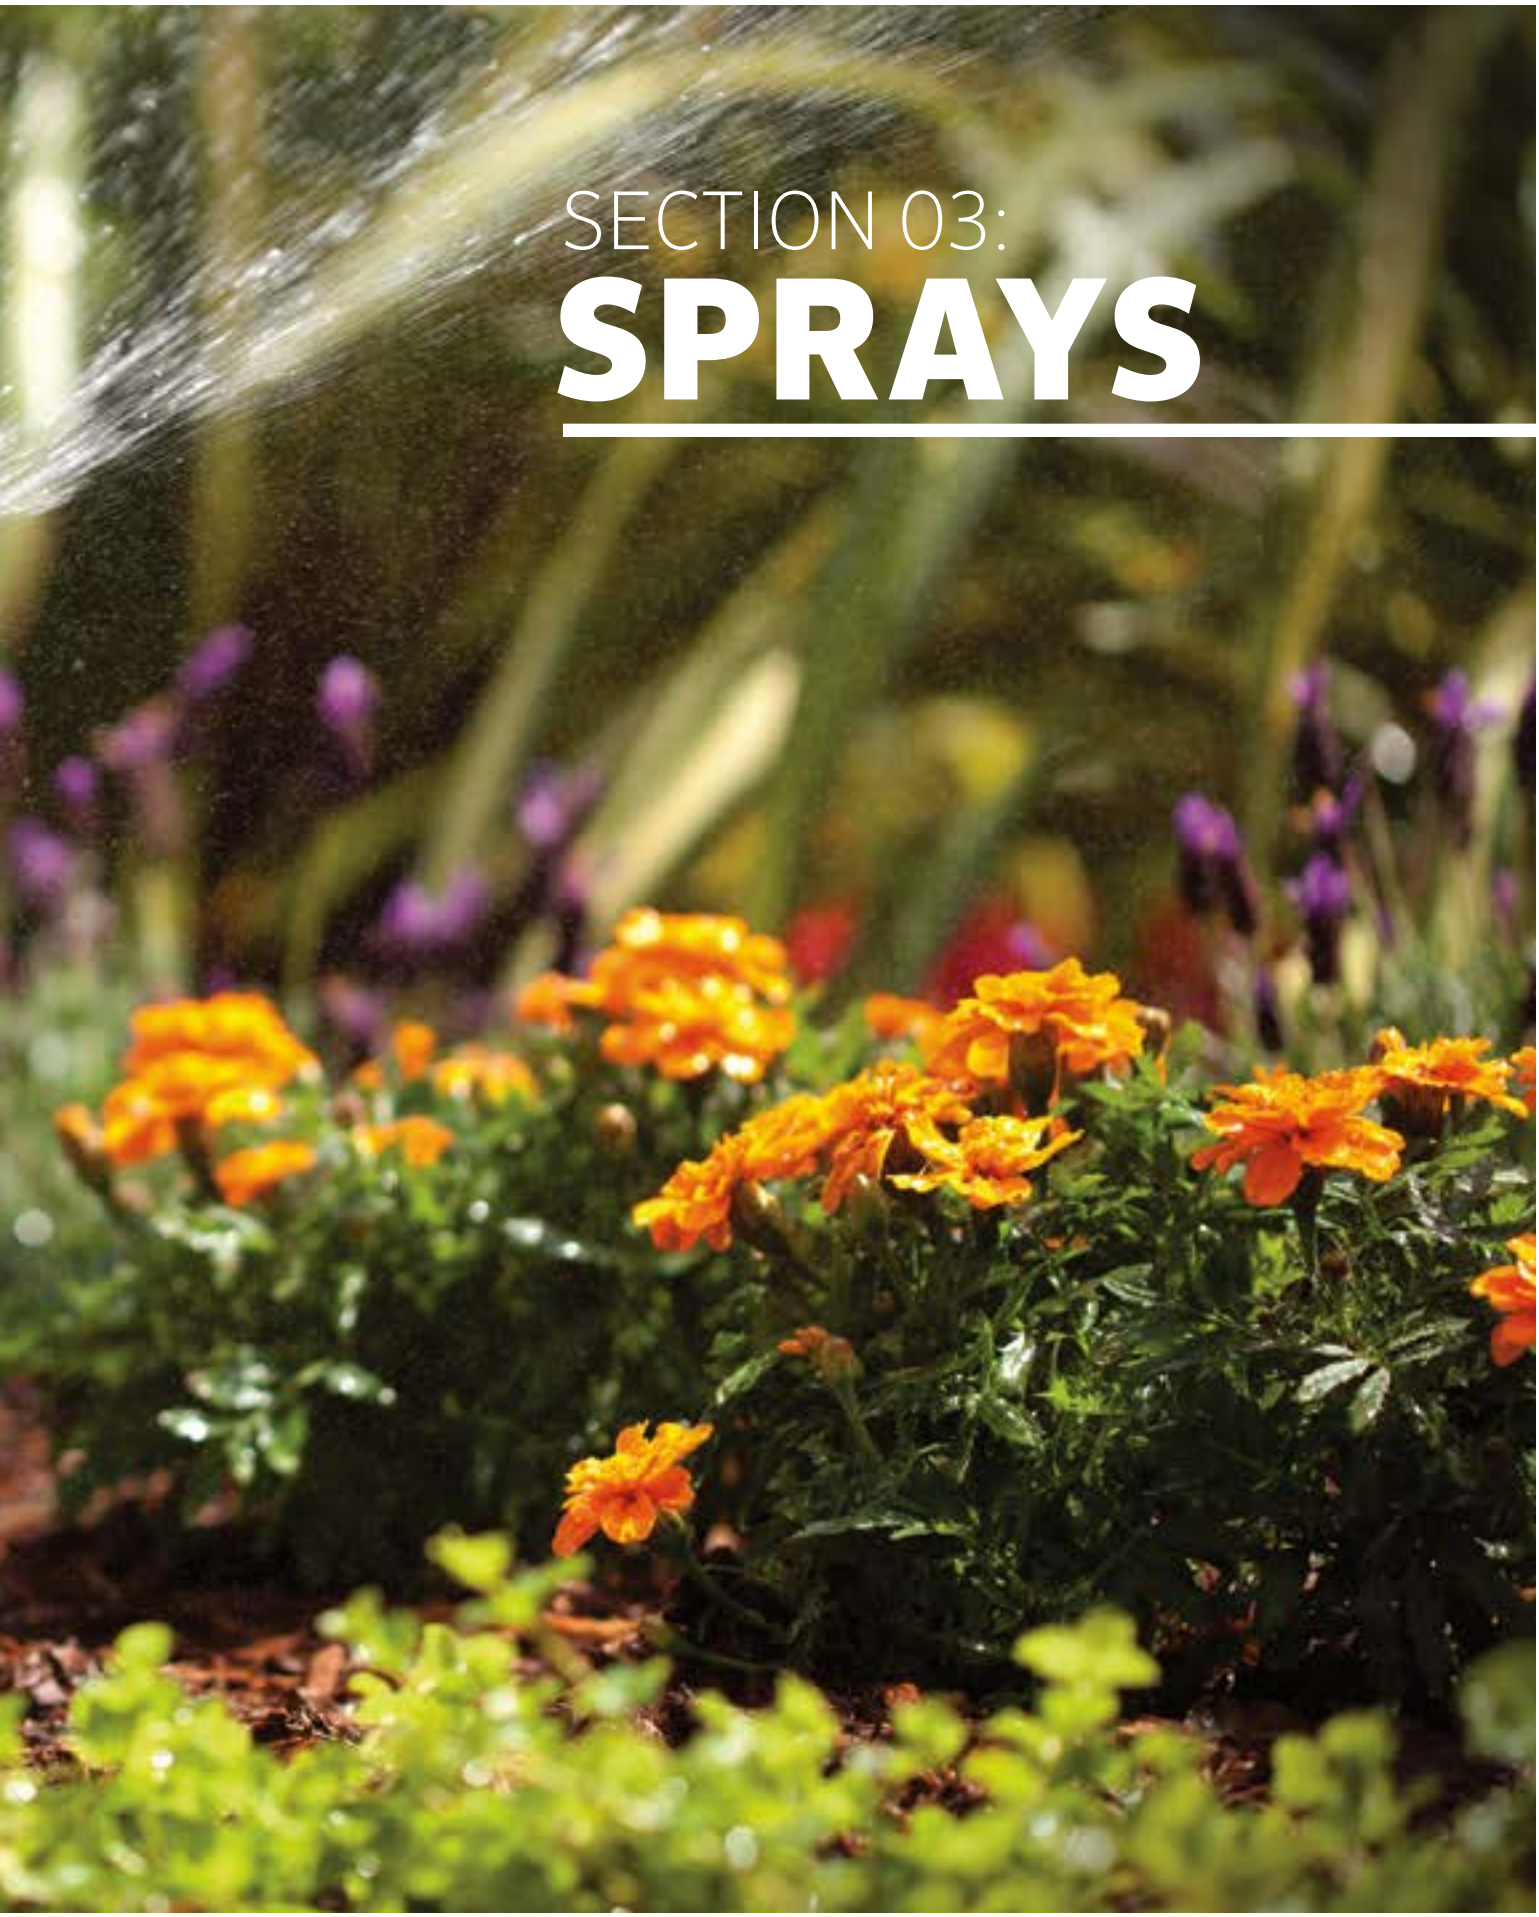
MP800 SERIES

Efficient Watering For Spaces Under 2.4 Metres

Efficiently simulating natural rainfall has always been a challenge in small spaces. Most spray nozzles with short radius capability apply water much faster than the soil can absorb (50 mm/hr or more), and typically have poor uniformity. Therefore, many users resort to drip irrigation which does not simulate rainfall, and cannot be used in turf applications. Up to now, high-volume, inefficient overhead sprays have been the only solution.

Now, Hunter introduces the MP800 Series, a high-efficiency overhead irrigation solution for small spaces. The MP800 Series will adjust down to 1.8 m, and uses a low precipitation rate of 20 mm/hr to help avoid runoff. Its superior distribution uniformity ensures that the least amount of water is used to get the job done.

To achieve its lowest radius setting of 1.8 m, an inlet pressure of 2.1 bar; 210 kPa is required. The MP800 Series should be paired with the PRS30 in this application.



SECTION 03: SPRAYS

SPRAYS
ADVANCED FEATURES

STRENGTH & DURABILITY

CO-MOLDED WIPER SEAL

The industry's most rugged wiper seal is co-molded from two types of chemical and chlorine-resistant materials. This pressure-activated, multi-function wiper seal reduces flow-by, operates at low pressures, and allows more sprinkler heads to be installed on the same zone. Its innovative design prevents debris from entering the seal when the riser is retracted, reducing riser stick-ups.

FLOGUARD™ TECHNOLOGY

In the event of a missing nozzle, FloGuard technology reduces the flow of water from the riser to a 1.9 l/min (3 m tall) indicator stream, eliminating water waste and preventing landscape erosion while providing a visual indicator for repair.

HEAVY-DUTY SPRING

The industry's strongest spring for positive retraction under any conditions.

PRO-SPRAY® CHECK VALVE

Optional check valves eliminate leaks and puddles at the lower heads, protecting landscapes from damage and erosion while reducing water waste. Choose from the convenience of factory-installed check valves or the flexibility of field installation.

PRESSURE REGULATED TO 2.1 & 2.8 BAR

Hunter's pressure regulated pop-up sprays are calibrated for the needs of any installation. The PRS30 with the brown cap optimises performance of traditional sprays at 2.1 bar; 210 kPa. The grey-capped 2.8 bar; 280 kPa PRS40 is designed for the efficient MP Rotator and is the only 2.8 bar; 280 kPa regulated pop-up on the market today.

INDUSTRY'S STRONGEST SPRAY BODY

The Pro-Spray line incorporates a heavy-duty ribbed body and durable cap engineered to withstand the harshest environments, including the rigors of foot traffic and the abuses of heavy machinery. In addition, the buttress thread design provides superior strength in cap-to-body gripping capacity helping the head to withstand high inlet surge pressures.

PRO-SPRAY **COMPETITOR**

INNOVATIVE SEAL DESIGN

Pedestrian traffic, landscaping equipment, temperature changes, and cycling pressures can often cause body caps to loosen. Most spray bodies utilize an O-Ring, which breaks seal immediately after loosening. The Pro-Spray can withstand more than one full 360° turn and remain sealed at any pressure.

Pro-Spray: Seal remains intact
Competitor: Significant leaking at the body cap

HUNTER SPRAY NOZZLES

Built to Last

SPRAY BODIES:

Always Perform Under Pressure
With an industry-leading 34.5 bar; 3,450 kPa burst pressure, the Pro-Spray® is built to perform in the most demanding irrigation systems in the world.

Innovative Seal Design Prevents Leaks
Most spray bodies leak when the cap is loosened only a quarter turn. The Pro-Spray can handle over one full turn of the cap with no leak or loss of performance.

SPRAY NOZZLES:

Designed for Complete Coverage
The industry's strongest edges and uniform coverage at full radius means no section of landscape is missed.

Thick Droplets Get the Job Done Right
Hunter spray nozzles disperse the largest water droplets of any spray nozzle on the market, so water is not deflected by wind or held back by thick turf.

ADVANCED FEATURES

DURABLE & RELIABLE

FLOW CONTROL

Available on:
PGV, ICV, IBV

Maximise efficiency and prolong the life of a system by fine tuning flow and pressure for each zone.

RECLAIMED WATER IDENTIFICATION

Available on:
PGV, ICV, IBV

Purple tags and handles are an option for a clear, quick, and simple method of identifying the use of non-potable water.

ACCU SYNC® PRESSURE REGULATION

Available on:
PGV, ICV, IBV

Avoid sprinkler over-pressure conditions and experience significant water savings with Hunter's Accu Sync pressure regulator. This option is available in adjustable pressure or fixed pressure models.

FILTER SENTRY™

Available on:
ICV, IBV

Filter Sentry disk scours the filter clean twice during each valve cycle. Since it is attached to the diaphragm, the Filter Sentry feature can be easily added after a valve has been installed.

NEW RECLAIMED ICV VALVE

The ICV-R reclaimed water valve is constructed with ultra-durable, chlorine-resistant materials and maintains top performance in reclaimed water installations.

Water-Saving Features

BUILT-IN SOLAR SYNC®

Includes logic for optional Solar Sync weather sensor. The smart sensor automatically adjusts watering for weather conditions, and provides shutdowns during rain or freeze events. Qualifies for many USA and International water-savings programs.

SOLAR SYNC DELAY

Solar Sync Delay allows the installer to specify a number of days before automatic weather adjustment begins. This allows a period of non-adjusted irrigation for grow-in or plant establishment purposes, without requiring a return visit to the site to enable the Solar Sync water-saving feature.

SEASONAL ADJUSTMENT

This feature allows for quick adjustments to irrigation run times through a percentage scale. During peak season, set the seasonal adjust to 100%. If weather conditions require less water, enter the appropriate percentage value (i.e. 50%) to cut down irrigation run times without the need to adjust each station in the program.

Seasonal Adjustments may be made manually at the controller dial position, or automatically with a connected Solar Sync smart sensor.

PROGRAMMABLE CLIK DELAY

This allows the user to delay programmed watering for a designated period after a Clik event (such as rain) ends. At the end of the programmed Clik Delay period, the controller will resume the normally programmed irrigation schedule.

CYCLE AND SOAK

Cycle and Soak splits a station's run time into smaller amounts of watering, with a delay before applying more water. This prevents waste and run off. The controller can run other stations during the soak time, for efficient use of time.

Diagnostic Features

QUICKCHECK™

QuickCheck is a diagnostic mode that automatically detects field wiring shorts by station number.

AUTOMATIC SHORT CIRCUIT PROTECTION

Detects field wiring faults and skips faulty stations, without damage to the controller. Allows watering to continue with unaffected stations.

REAL TIME FLOW MONITORING

Allows the controller with a connected flow meter to recognize high and low flow conditions, react automatically to alarms, and report flow totals. Faulty stations are recorded for repair, and the controller continues water with the next station.

Advanced & Special Features

NON-WATER DAYS

Prevents certain days of the week from ever watering, regardless of the schedule type. Useful for weekly mowing days or other planned events.

TOTAL RUN TIME CALCULATOR

This calculates the total duration of a program, based on all of its station run times. This can be used to calculate the end time of a program.

PROGRAMMABLE DECODERS

Each decoder is programmed with its actual station (valve) numbers for simplicity and reliability. Decoders may be re-programmed at any time if desired. Hunter decoders do not require lengthy serial numbers.

SIMULTANEOUS STATION GROUPS/BLOCKS

Simultaneous Station Groups allow groups of stations to run together within a program. This permits consolidation of large systems into fewer items to program, and can be used to control system flow in high capacity installations.

SENSOR PROGRAMMABILITY

This feature allows the user to specify which program or stations will be shut down in response to a specific sensor alarm. Stations or programs not affected by the sensor continue to run automatically.

DELAY BETWEEN STATIONS

Users can program a delay between stations as the controller advances from one station to the next. This delay can range from a few seconds (to permit slow-closing valves additional time to close) to a much longer period of time (to allow pressure tanks time to recharge), based on user requirements.

MULTI-LANGUAGE PROGRAMMING

Users can choose to program Hunter controllers in various different languages.

WATER MANAGEMENT SOFTWARE

ADVANCED FEATURES

CONTRACTOR MANAGEMENT SYSTEM

Hydrawise™ software provides the ultimate irrigation and customer management solution. The Hydrawise Contractor Portal provides a simple-to-use, yet extremely versatile system for managing customer irrigation controllers without having to visit the site.

PROVEN WATER SAVER

Hydrawise software combines internet weather adjustments with professional programming features. These combined features allow for up to 50 percent in water savings vs. a controller base that is programmed and not adjusted throughout the year.

PREDICTIVE WATERING™ ADJUSTMENTS

Daily schedule adjustments, based on local weather data; monitor past, current and forecasted temperature, rainfall, humidity, and wind speed. This allows for adjustments of watering times and schedules to balance water savings with water efficiency for plants.

WEATHER STATIONS

Hydrawise allows you to use any local airport weather station at no cost or add up to five (5) weather stations from Weather Underground with an Enthusiast Plan for hyper-local weather data. With this flexible web-based weather system, you can even add your own weather station, if there is no weather station nearby.

USER MANAGEMENT

If you want to be able to have different users log into your controller, like your significant other, the Enthusiast Plan lets you add multiple users to your account. Users can even be 'read only,' so that they can't make any changes to your configuration.

ENHANCED REPORTING

See how much water you have used in the last day or month and see how much water you have saved. The full reporting package allows you to summarize minimum, maximum, average and totals for all reports. You can even share these reports with your clients, so they can be in the know.

CONTROLLER LOGS

Get a clear picture of the controller's history such as faulty wiring issues, flow meter alerts, program changes and watering events that are all logged.

IRRIGATION LAYOUTS AND SCHEDULES

Save time on the job site by attaching your site plans to the controller. This allows you to quickly locate piping and valves.

HYDRAWISE™ SOFTWARE

Maximum **Controllers: Unlimited**

SECTION 08: MICRO

ADVANCED FEATURES

Engineered for peak performance in even the harshest conditions, Hunter's ultra-durable micro irrigation products are the toughest and most resilient in the industry. Combining unmatched strength with high-quality, long-lasting performance in the field, our products ensure precise water delivery for years to come.

ECO-MAT®

Designed to suit a variety of hard-to-irrigate areas, the Eco-Mat uses an engineered combination of Hunter's fleece-wrapped professional landscape dripline attached to a specialized fleece blanket, which evenly disperses water within the root zone.

ECO-WRAP®

Eco-Wrap is Hunter's fleece-wrapped professional landscape dripline, which transports water quickly and more efficiently than bare dripline.

ECO-INDICATOR

The Eco-Indicator provides a visual signal that the system is operating. Pair with Eco-Mat and Eco-Wrap subsurface systems or any drip system where emitters are obscured.

DRIP CONTROL ZONE KITS

Hunter offers the absolute highest quality in control zone kits, from low-flow to high-flow systems. Some features, such as our Filter Sentry™ scrubber, add further value to an already superior kit.

PLD-LOC FITTINGS

PLD-Loc Fittings are easier and faster than other fittings with easy push-on installation. Threads lock them into place. Fits all dripline inside diameters: 16 mm, 17 mm, 18 mm, and ½" black poly tubing. Reusable - perfect for drip irrigation maintenance.

MULTI-PURPOSE BOX

The HDPE Box is just the right size to provide easy access to air relief, automatic flush valves, ball valves, large emitters, wiring connections, and even valves or filters.

RZWS - ROOT ZONE WATERING SYSTEM

The Root Zone Watering System features Hunter's patented StrataRoot™ design, which is a series of internal baffles that deliver water to all levels of the root zone. The RZWS is pre-assembled to save time, and the enclosed design and grate protect irrigation hardware from vandalism.

PLD - PROFESSIONAL LANDSCAPE DRIPLINE

Hunter's PLD provides a pressure compensation system with built-in check valve to help prevent emitter clogging and water loss and ensure even flows on all terrains and lateral lengths.

POINT SOURCE EMITTERS

A wide range of flow rates offers you the flexibility to give individual plants and trees the right amount of water from a single emitter. Color-coded for flow identification with coined edges for easy gripping during installation.

MULTI-PORT EMITTERS

Pressure-compensating commercial-grade emitters for all PVC systems. Perfect for mixed plantings or a series of shrubs. Color coded to match other Hunter emitters.

RIGID RISERS

Designed for rugged system designs. Accept 10-32 threaded components. A perfect solution for annual flower beds and planters.

IH RISERS

Heavy-duty commercial-grade risers with a vandal-resistant design. Available in 30 cm or 61 cm blank or emitter style. Emitter style includes screens with check valves. Brown components blend in with the landscape.

AIR/VACUUM RELIEF VALVE

The Hunter AVR is designed to reliably discharge air during system start-up and allow air into the line during shutdown. Assisting in reducing water hammer, the valve should close reliably even with low water pressure.

AUTOMATIC FLUSH VALVE

Automatically flushes debris at system start-up.

GOLF ROTORS

GOLF ROTORS
ADVANCED FEATURES

GOLF IRRIGATION

THE G885 HAS POWER TO SPARE

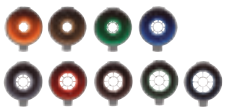
Boasting the highest torque output of any golf rotor on the market, the G885's patented gear drive will push through anything that gets in its way. Try it yourself and see. With just one rotation of the turret by hand, you can clearly feel this rotor's formidable durability. With such a powerful core, an array of efficient nozzles, and true full circle and part circle capabilities, the G885 is the golf rotor you can always count on.

EASY ARC ADJUSTMENT WITH OR WITHOUT A TOOL

With the G885, the arc is adjustable anytime; uninstalled, installed or while in operation. The convenient adjustment ring can be rotated by hand, or with the easy-to-use arc adjustment tool. This combination tool can also be used as a means to hold the riser in the popped-up position for nozzle changes.

DUAL TRAJECTORY FLEXIBILITY

Choose from the wide assortment of efficient wind-fighting 22.5° standard trajectory nozzles, or the 15° low-angle trajectory nozzles. Either way, there is a perfect match for your unique course conditions and problem-solving needs. Regardless of the version you choose, changing nozzles is fast and easy with Hunter's exclusive QuickChange technology.



CONTOUR "BACK-NOZZLE" CAPABILITY

Whether you want a little extra green behind your adjustable arc G885 rotors or a more "modeled" look to your fairway's hard edges, contour "Back-Nozzles" are here to make your vision a reality. They are also great for reducing water use along perimeter housing areas and other unique situations around the course. Choose from six short-range or seven mid-range nozzles to suit your needs.

RATCHETING RISER WITH QUICKSET-360 ADJUSTABILITY

Setting up your adjustable arc G885 is fast and simple. The integrated ratcheting mechanism allows a simple twist of the riser to align the right-side reversing point. Then, the adjustment ring is used to quickly set the arc and left-side reversing point. The G885 is also easily convertible to a true non-reversing full circle rotor with our exclusive QuickSet-360 feature.

PRIMARY NOZZLE ADAPTER

Unique irrigation problems exist on nearly every golf course. This is especially true in tight, hard-to-irrigate areas. The G885 primary nozzle adapter can solve many of these problems quickly and easily by allowing you to mix and match nozzles to get the coverage needed, or to plug the primary flow completely.

ALSO AVAILABLE, THE NEW G85B BLOCK ROTOR

If you're looking for a cost-effective golf rotor with a wide-range of radius and feature capabilities, including a recessed area for a yardage marker, the G85B block rotor is here. It includes all the great features of the G885 rotor at a fraction of the cost.

SECTION 12:

CENTRAL CONTROL

PILOT® CENTRAL CONTROL
ADVANCED FEATURES

COMPLETE CONTROL

PILOT-CC SOFTWARE CENTRAL CONTROL

Safely balance sprinkler demand with water and electrical supply for the most efficient irrigation cycles possible.

PILOT-FC FIELD CONTROLLER

The Pilot field controller manages up to 80 stations in 10 station increments. The full-featured controller has everything you need in a stand-alone field controller. For a fully automated, flow-optimised system, network all your controllers together with Pilot-CC central control software.

Communication options include hardwire, UHF radio, and two spread-spectrum bands. Power options include both 120 VAC and 230 VAC.

PILOT-DH DECODER HUB

Pilot includes a two-wire decoder option. Pilot-DH decoder hubs have a 999-station capacity and can run up to 120 stations simultaneously.

The hub has a plastic pedestal enclosure with a full-featured control panel. It can be used as in-field control, a stand-alone decoder controller, or linked to a Pilot-CC central control for fully flow-optimised irrigation management.

Communication options include hardwire, UHF radio, and two spread-spectrum bands. Power options include both 120 and 230 VAC.

EASY TO PROGRAM AND MAINTAIN

Ease-of-Use: The control panel features a large, multi-language display and an array of function buttons providing quick access to the most commonly used features. The display clearly shows what the controller is doing and has a unique feature which shows the user what time the next scheduled watering will occur.

Ease-of-Maintenance: The system was designed with you in mind. Circuit boards are encapsulated in polyurethane to reduce damage from moisture and pests. All hardware is captured, so you won't lose screws in the grass. The clean, modular design of Pilot units allow them to be serviced with a Phillips screwdriver, which we provide with every controller.

PILOT® SOFTWARE

Pilot is easy to use and has all the features you need to reliably and automatically water your course. Runtimes can be adjusted manually or determined automatically using application depth. Irrigation is scheduled through a powerful programming matrix which lets you see every sprinkler on the course while you make your adjustments. Pilot offers two types of water management, flow optimised and FCP or field controller program. When flow-optimised, electrical and hydraulic demand are efficiently managed to ensure your watering window is as short as possible. When you use an FCP you have total control over when, where and how long sprinklers run—perfect for overseeding, seed germination, grow-in and other cultural practices where optimal use of the pump station is a secondary concern. FCPs can be retrieved into the central control software, edited, then sent back to the field unit – so you can manage all your controller schedules from the computer in your office.

PILOT SOFTWARE SPECIFICATIONS

- Operating system: 64-bit Windows® 8
- Maximum field controllers: 999
- Maximum stations: 79,920
- ET-based scheduling: weather station or manually entered
- Hydraulic management: automated and graphed to individual stations
- Mapping: online maps converted from AutoCAD and other applications

MANAGE THE FLOW

Pilot® uses your electrical and hydraulic data to efficiently balance sprinkler demand while maintaining flow at safe velocities. To protect your pump station and maintain optimal sprinkler uniformity, irrigation can be gradually stepped up in safe increments.

Flow Optimisation

CREATE AND EDIT SCHEDULES OUT ON THE COURSE

With Pilot, critical irrigation is not dependent upon the whims and availability of a computer or communications link where it is subject to a single point of failure. Pilot software creates schedules then sends them to the field where controllers do the actual irrigating. Because Pilot field controllers are packed with intelligence, you can even create and edit schedules out on the course and transfer them back to Pilot for review and editing.

Schedule Creation

MAPPING YOUR COURSE

Although it is not required to have a map, adding one allows you to run water by clicking the station symbols on the map, monitor stations as they are running, and adjust certain settings.

PILOT® DECODERS

Application: **Golf**
Number of Stations: **999**
Type: **Decoder System**

Decoder installations continue to be one of the fastest growing forms of technology in irrigation control. A key advantage over conventional systems is that decoders use less wire for an overall irrigation system. That means lower cost, quicker installation time, and easier system diagnosis and repair if needed. Systems can be easily expanded—with minimal digging and disruption of landscaping—by adding in more decoders rather than running additional wires.

Pilot enables you to take advantage of this cost-efficient approach. Pilot decoders are available with 1, 2, 4 and 6-station outputs, making it possible to run each head on an entire green with a single decoder. In all, decoders let you operate up to 999 stations out to 4.5 km from a single hub.

Pilot decoder systems include built-in surge suppression, colour-coded wire connections, true independent station control, programmable station addresses, and two-way feedback to the controller with confirmation and status indication.

Pilot-SG surge protectors are required when a system is designed and installed with Decoder-In-Head (DIH) rotors.

Pilot Decoder Hub

Water-Resistant Keypad
Backlit display and secondary LED facepack means it can be used day or night

Diagnostic LED Indicators
For all functions on decoder output module

250-Station Output Modules
Enable your decoder hub to grow with your course. Start with 250 - grow to 999

Pilot Decoders
1 & 2 Station Decoders:
Height: 9 cm
Width: 4 cm
Depth: 2.5 cm
Weight: 150 g

4 & 6 Station Decoders:
Height: 9 cm
Width: 4.5 cm
Depth: 4 cm
Weight: 250 g

Distinct yellow design makes it much easier to find decoders in dark valve boxes or buried in the soil.

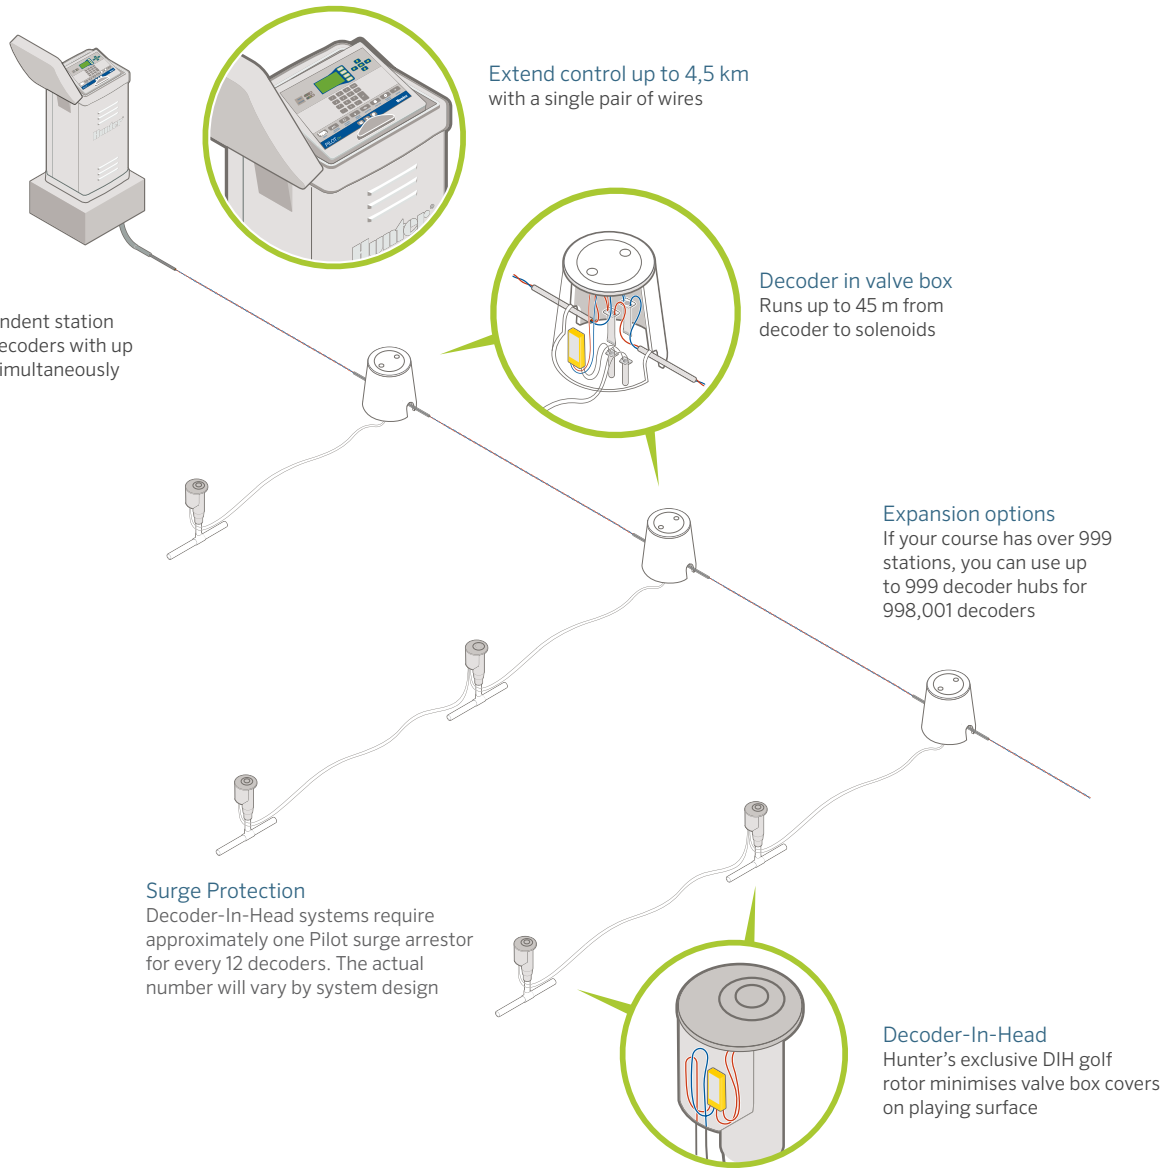
DS-G Surge Ground Arrestor

All DIH rotors include two 3M DBRY-6 splices for connection to the 2-wire path. DIH rotor control systems require grounding with Pilot-SG surge suppressors coupled to appropriate grounding plate or rod. Hunter recommends a minimum of one Pilot-SG for every 12 installed DIH rotors or as per project specification.

PILOT-DH – SPECIFICATION BUILDER ORDER 1 + 2 + 3

1 Model	2 Standard Features	3 Options	
Pilot-DH250 (250-station)	Plastic pedestal (grey)	**S**	Stand-alone decoder hub with no central communications
Pilot-DH500 (500-station)		**HWR**	Hardwire communications
Pilot-DH750 (750-station)		**UHF**	UHF radio communications (where permitted, licence required)
Pilot-DH999 (999-station)		**LF**	Licence-free spread spectrum radio communications (900 MHz for North America and where permitted)

Examples:
Pilot-DH250-S = 250-station, stand-alone decoder hub with no central communications
Pilot-DH999-HWR = 999-station decoder hub with hardwire communications



Extend control up to 4,5 km
with a single pair of wires

Pilot-DH
Provides independent station control of 999 decoders with up to 120 running simultaneously

Decoder in valve box
Runs up to 45 m from decoder to solenoids

Expansion options
If your course has over 999 stations, you can use up to 999 decoder hubs for 998,001 decoders

Surge Protection
Decoder-In-Head systems require approximately one Pilot surge arrestor for every 12 decoders. The actual number will vary by system design

Decoder-In-Head
Hunter's exclusive DIH golf rotor minimises valve box covers on playing surface

PRECIPITATION RATES

In this section, the "Sprinkler Spacing Method–Any Arc and Any Spacing" equation is used to calculate precipitation rates. The first set of equations with the ■ shows the precipitation rate for the sprinklers when they are laid out in a square pattern. The next set with the ▲ shows the precipitation rate for the sprinklers laid out in an equilateral triangular spacing pattern. This is the "Sprinkler Spacing Method–Equilateral Triangular Spacing" equation.

WHAT IS PRECIPITATION RATE?

If someone said they were caught in a rainstorm that dropped 25mm of water in an hour, you would have some idea of how hard or heavily the rain came down. A rainstorm that covers an area with 25mm of water in one hour has a precipitation rate of one meter per hour (25 mm/hr). Similarly, the precipitation rate is the speed at which a sprinkler or an irrigation system applies water.

MATCHED PRECIPITATION RATES

A zone or system in which all the heads have similar precipitation rates is said to have "matched precipitation rates." Systems that have matched precipitation rates reduce wet and dry spots and excessive run times, which lead to high water consumption and increased costs. Knowing that sprinkler spacing, flow rates, and arcs of coverage affect precipitation rates, a general guideline is: as the spray arc doubles, so should the flow.

90° Arc = 1 GPM; 0.23 m^3/hr; 3.8 l/min

180° Arc = 2 GPM; 0.45 m^3/hr; 7.6 l/min

360° Arc = 4 GPM; 0.91 m^3/hr; 15.1 l/min

The flow rate of half-circle heads must be two times the flow rate of the quarter-circle heads, and the full-circle heads must have two times the flow rate of the half-circle heads. In the illustration, the same amount of water is applied to each quarter circle area and precipitation is therefore matched.

CALCULATING PRECIPITATION RATES

Depending upon the construction of the irrigation system, the precipitation rate may be calculated by either a Sprinkler Spacing or a Total Area method.

Sprinkler Spacing Method (■)
The precipitation rate should be calculated for each individual zone. If all sprinkler heads on the zone have the same spacing, flow rate, and arc of coverage, use one of the following formulas:

Any Arc and Any Spacing (■):

P.R. (in/hr) = Flow Rate (GPM) for any Arc x 34,650 / Degrees of Arc x Head Spacing (ft.) x Row Spacing (ft.)

P.R. (mm/hr) = Flow Rate (m^3/hr) for any Arc x 360,000 / Degrees of Arc x Head Spacing (m) x Row Spacing (m)

P.R. (mm/hr) = Flow Rate (l/min) for any Arc x 21,600 / Degrees of Arc x Head Spacing (m) x Row Spacing (m)

Sprinkler Spacing Method (▲)
The precipitation rate should be calculated for each individual zone. If all sprinkler heads on the zone have the same spacing, flow rate, and arc of coverage, use one of the following formulas:

Equilateral Triangular Spacing (▲):

P.R. (in/hr) = Flow Rate (GPM) for any Arc x 34,650 / Degrees of Arc x (Head Spacing)^2 x 0.866

P.R. (mm/hr) = Flow Rate (m^3/hr) for any Arc x 360,000 / Degrees of Arc x (Head Spacing)^2 x 0.866

P.R. (mm/hr) = Flow Rate (l/min) for any Arc x 21,600 / Degrees of Arc x (Head Spacing)^2 x 0.866

Total Area Method
The precipitation rate for a "system" is the average precipitation rate of all sprinklers in an area, regardless of the spacing, flow rate, or arc for each head. The Total Area Method calculates all the flows of all of the heads in any given area.

P.R. (in/hr) = Flow (GPM) x 96.25 / Total Area (ft.)

P.R. (mm/hr) = Flow (m^3/hr) x 1,000 / Total Area (m^2)

P.R. (mm/hr) = Flow (l/min) x 60 / Total Area (m^2)

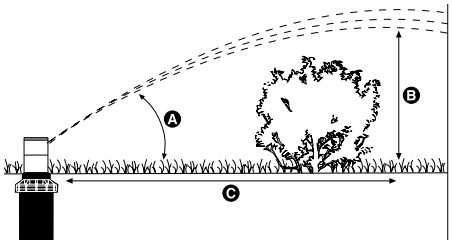
HEIGHT OF SPRAY

The trajectory and spray height of the water stream leaving a sprinkler nozzle is important information when designing and installing irrigation systems.



These rotor nozzle trajectory charts are designed to help determine how close a sprinkler can be placed to an object such as a fence or hedge without obstructing the spray pattern. All information shown is at optimum operating pressures.

WIRE SIZING

REQUIRED INFORMATION

Actual one-way length of wire between the controllers and the power source or the controllers and valves

Allowable voltage loss along the wire circuit

Accumulative current flowing through the wire section being sized in amperes

RESISTANCE IS CALCULATED USING THIS FORMULA:

$$R = \frac{1{,}000 \times AVL}{2L \times I}$$

R = Maximum Allowable Resistance of wire in ohms per 300 m
AVL = Allowable voltage loss
L = Wire length (one way)
I = Inrush current

AVL for controller power wire sizing is calculated by subtracting the minimum operating voltage required by the controller from the minimum available voltage at the power source.

AVL for valve wire sizing is calculated by subtracting minimum solenoid operating voltage from controller output voltage. This number will vary depending on the manufacturer and in some cases with line pressure.

VALVE WIRE SIZING EXAMPLE

Given: The distance from the controller to the valve is 600 m. The controller output is 24 V. The valve has a minimum operating voltage of 20 V and an inrush current of 370 mA (0.37 A).

$$R = \frac{1{,}000 \times 4}{2\,(600) \times 0.37}$$

$$R = \frac{4{,}000}{444}$$

$$R = 9.01 \text{ ohms}/1{,}000 \text{ m}$$

So, wire resistance cannot exceed 9 ohms per 1,000 m. Now go to table #1 and select the proper wire size. Since 1.5 mm^2 gauge wire has more resistance than 9 ohms per 300 m, choose 2.5 mm^2 wire.

Table 2 is a quick reference and is set up to provide maximum wire runs given the information at the bottom of the table.

2.5	7.4
