

## Play sound using Bluetooth

- Get the Bluetooth dongle from the brown pouch in the red bag
- Plug it in and turn on power - see below. Blue flashing light on dongle.

- #Connect it to the Amp – see below. It doesn't matter which way round you plug the leads in.
- Turn amp on and turn the input knob (on left, out of picture) till 'V - AUX' shows'

- On the playing device (iPhone, tablet, laptop) go to Bluetooth settings, and connect to 'OFA Music receiver'. Blue continuous light on dongle.
- Any sound played on the device will now play through our amp and speakers. Adjust the amp volume to a medium setting so that fine control can be done from the device.
- If streaming from Spotify or other service is required, get the device connected to the club's internet.
- The dongle will only connect to one device at a time, so if you have used your device to check it out, disconnect it so that the speaker can connect.

## Play sound and video through the TV

- Find the black HDMI cable from the TV behind the amplifier and connect it to the green/blue/black HDMI cable from the red bag, using the mate to male converter.
- Plug it into the device HDMI port. See below.
- Using the TV remote, press 'Input', and select 'HDMI1'.

- Turn on the amp and set the input to DVD AUX (left hand knob, not in pic).

- Video on the laptop will now play on the TV, and sound through the amp.
