

What if the biggest risk to your business is something you **don't know exists?**

Your organisation depends on people, suppliers, partners, data and technology. And they depend on others.

Resolut maps these relationships, identifies previously unknown dependencies and continuously verifies the information your organisation relies upon.

So you can see what matters, know when something changes and act.

1

DISCOVER

Make the unknown known.

Identify dependencies you didn't know existed across people, organisations, supply chains and technology.

You can only manage a risk once you know it exists.

2

VERIFY

Verify what you rely on.

Maintain a continuously verified status of the people, organisations and dependencies your business relies upon.

Know whether what was true yesterday is still true today.

3

RESPOND

Know when something changes.

Identify when a verified status changes and understand who or what is affected.

See the change. Understand the impact. Act on the risk.

4

MINIMISE

Hold less. Prove more.

Reduce unnecessary collection, duplication and retention of personal information and compliance documentation.

Allow information owners to retain greater control while providing your organisation with the verified evidence or status it needs.

**Less information to hold.
Less to administer. Less to protect.**

FOUR CAPABILITIES. ONE CONNECTED OUTCOME.

Discover what you don't know. Verify what you depend upon. Know when it changes. Hold less. Prove more.

Together, these capabilities reduce compliance overhead, expose previously unknown dependencies and provide the continuously verified information needed to strengthen organisational resilience.

**Verifiable
organisational
resilience.**
