NEO

NP10/20

Reinventing every aspect of the traditional antenna, the new NP10 and NP20 boast a sleek & contemporary design structure. Powerful performance improvements delivered by our new NEO wireless electronics pushes the capabilities of RF-based EAS solutions, increasing standard detection range by up to 30%* enabling stores to place antennas further apart, requiring fewer antenna per install or at standard aisle widths delivering superior detection, so stores can protect even the smallest products against theft. Intelligent connectivity allows for continual software updates and improvements meaning NEO remains constantly optimised over its life span.

- Increased aisle width between sensors, opening store entrances
- 30% increase in detection range at standard aisle widths*
- Wireless connectivity - easy installation, instant secure synchronisation & network communication
- Multiple audio files - flexibility to choose alarm sounds or download a custom file

“Functional, beautiful and better performing, the NP range will change how you view EAS sensors.”

NEO wireless electronics

Intelligence built in

The NEO platform advances performance capabilities beyond traditional antenna. A sophisticated sensor, NEO connects directly to store networks, mobile and the Checkpoint cloud platform with no middleware, allowing continuous and seamless data gathering. With its 24/7 real-time self-health check, any issues are picked up immediately. The new electronics mean the antennas are compact and slimmer with the scope of supporting more technology, without changing the aesthetics of the antenna frame.

- Remote connectivity ensures the EAS investment is online 24/7
- Data Collection and management via Cloud/Real Time monitoring
- Live System health check via Smartphone app
- On-Line and Live Service Support.
