SPECIAL THANKS TO THE FOLLOWING:

As 2022 represents the 50th anniversary of the North Alabama Bull Evaluation, Alabama BCIA would like to extend much gratitude to Donaldson Farms, our evaluation host for 31 years, past evaluation supervisors, consignors both past and present, buyers both past and present, and Cullman Stockyards who all have made reaching this milestone possible. We extend an invitation to you all to come celebrate this accomplishment with us on December 10.

J&R Feed for supplying quality feed ingredients

Dr. Bruce Lee, DVM and Dr. Christi Standridge, DVM and for veterinary work at the North Alabama Bull Evaluation Center

Sam England and Ultra Insights for providing ultrasound expertise

The EPDs published in this catalog represent values current at the end of the bull evaluation on 11/1/2022.

***You are welcome to visit the bulls any time.
Give Tim Donaldson a call to make an appointment.***

The Alabama Cooperative Extension System (Alabama A&M University and Auburn University) is an equal opportunity educator and employer.
Everyone is welcome!

SALE TERMS AND CONDITIONS

EXCEPT FOR THOSE STATED IN THE BELOW TERMS AND CONDITIONS, THERE ARE NO WARRANTIES, EITHER EXPRESSED OR IMPLIED, AS TO THE MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WITH RESECT TO THE CATTLE BEING SOLD AT THIS AUCTION.

THE WARRANTIES AND GUARANTEES SET FORTH IN THE "TERMS AND CONDITIONS" ARE IN LIEU OF ALL OTHER WARRANTIES EITHER EXPRESSED OR IMPLIED, AND THE REMEDIES PROVIDED THEREIN SHALL BE THE SOLE AND EXCLUSIVE REMEDY OF THE BUYER, OR ANY PARTY CLAIMING THROUGH BUYER, FOR ANY BREACH OF WARRANTY OR GUARANTEE THEREIN PROVIDED, AND ALL OTHER OBLIGATIONS OR LIABILITIES.

TIME AND LOCATION: The North Alabama Bull Evaluation Center BCIA Bull Sale will be held **Saturday, December 10, 2022**, at the Cullman Livestock Auction, Cullman, AL.

BIDDING: All bulls will be sold to the highest bidder. The auctioneer will settle any disputes in bidding and his decision on such matters is final.

TERMS: The terms of the sale are cash or check unless credit arrangements, including any possible reservation of security interest, have been made by the interested party with the vendor, Alabama BCIA, prior to sale. The party financially responsible for each purchase will be the person's name that registered to the purchasing buyer number.

PURCHASER'S RISK: Each animal will become the purchaser's risk as soon as sold.

CERTIFICATE OF REGISTRY: A transferred certificate of registry will be furnished to the purchaser of each animal within sixty (60) days following date of sale or receipt of full payment.

HEALTH: All bulls are eligible for interstate shipment; except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bangs test in accordance with Federal Regulations.

ANNOUNCEMENTS: Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

BREEDING GUARANTEE

1. Every bull selling is guaranteed to be a breeder, with the exception of: a) injury or disease occurring after sale; b) Gross negligence or willful misconduct on the part of the purchaser.
2. **BULLS** are guaranteed breeders. Any bull which settles cows by natural service and passes a fertility test by competent veterinarians, mutually agreed upon by buyer and seller, during any 6 month period of trial (provided for in paragraph 2 of these sales terms and conditions entitled "Option and Privilege of Return and Adjustment") shall be considered a breeder. Guarantees with respect to ability to freeze semen shall be by separate agreement between the buyer and seller.

IDENTIFICATION: Seller offers each animal with a readable tattoo corresponding to its registration paper. Buyer agrees to check tattoo for accuracy. In those cases where a nickname is used, it shall be accompanied by the official registered name and number of the animal.

OPTIONS AND PRIVILEGES OF RETURN OR ADJUSTMENT: All claims for adjustment must be made in writing within six months of the sale date.

In the event the animal **is claimed to be a non-breeder**, the animal may be returned to the farm of the seller if in good condition and complying with the health requirements of the seller's

state. The seller shall be entitled to a six month trial following the return of the animal in which to prove that the animal is a breeder. If at the end of six months the seller is unable to prove the animal is a breeder, the seller shall, at the option of the buyer, replace the animal with another of equal value or refund the purchase price. The return of the full purchase price, shall be in any case be deemed full satisfaction and settlement. Any expense incurred for transportation of an animal claimed to be a non-breeder shall be the responsibility of the purchaser, except that the seller shall be responsible for transportation costs in excess of the distance between the purchaser's farm and the location where the sale took place. If the seller proves the animal to be a breeder, it shall be the obligation of the purchaser to take delivery of the animal and pay all expenses incurred for transportation.

If an animal is sold, and at a later date, proves not to be eligible for registration under the Association rules, the seller shall be obligated to make satisfactory adjustment on the purchase price to the buyer, or at the buyer's option refund the purchase price upon the return of the animal to the farm or seller. Any expense incurred for transportation shall be the responsibility of the purchaser, except the seller shall be responsible for the transportation costs in excess of the distance between the purchaser's farm and the location where the sale took place.

If an animal is sold and through blood typing is proven to have incorrect parentage, as represented by the certificate of registration, and for which parentage can be determined, the seller shall be obligated to make a satisfactory adjustment on the purchased price to the buyer or, at the buyer's option refund the purchase price upon the return of the animal to the farm of the seller. Any expense incurred for transportation shall be the responsibility of the purchaser, except the seller shall be responsible for the transportation costs in excess of the distance between the purchaser's farm and the location where the sale took place.

RIGHTS AND OBLIGATIONS: The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction. All persons attending the sale do so at their own risk. The seller, Alabama Cooperative Extension System, Auburn University or the Alabama BCIA will not assume any liability, legal or otherwise, for the safety of those attending this sale.

MAIL AND TELEPHONE BIDS: Mailed or telephone bids will be handled in a most confidential manner if you are unable to attend the sale personally. Please contact the Auctioneer (Col. Jarvene Shackelford or Michelle Elmore).

BUYER NUMBERS: On the day of the sale, prospective bull buyers are asked to acquire a buyer number from the front desk in the Cullman Livestock Auction

DEFINITIONS AND ABBREVIATIONS

Birth Wt:	Weight taken before the calf is 24 hours old.
Adj. Wean Wt.:	Weaning weight adjusted to 205 days and adjusted for age of dam.
Test ADG:	Average daily gain on 84 day test. ADG ratio determined within breed group and age group. Ratio above 100 indicates ADG above group average.
Test WDA:	Weight per day of age at the end of test. WDA ratio is determined within breed group and age group. A ratio above 100 indicates a WDA above the breed group average.
Final Wt.:	Final weight of the bull at the end of the 84 day test period
Foot Score:	Each bull was evaluated for foot structure using the American Angus Association foot score guidelines. A score of 5 is ideal for both pastern and claw set. See chart on inside back cover. The first number is claw set. Second number is pastern angle score.
Frame Score:	Frame Score using BIF formula.
Yearling Wt.:	Adjusted 365 day yearling weight (BIF formula used) for bulls on performance test.
Scrotal:	Scrotal circumference in centimeters taken during the breeding soundness exam.
Ultrasound BF	Adjusted Ultrasound Backfat Thickness measured between the 12th and 13th ribs in inches. BF Ratio is calculated within breed.
Ultrasound REA:	Adjusted Ultrasound Ribeye Area measured between the 12th and 13th ribs in sq. inches. REA ratio is calculated within breed.
Ultrasound IMF:	Adjusted Ultrasound Percent Intramuscular Fat measured in the ribeye muscle. This can predict marbling in the ribeye muscle, which determines USDA Quality Grade. IMF Ratio is calculated within breed.
Final Index:	The final ratio within breed and test using an equal combination of ADG, WDA and EPD values.

EXPECTED PROGENY DIFFERENCES (EPD): The expected difference in performance of a bull's progeny when compared to the average progeny performance of all bulls evaluated. EPD's are reported in pounds and are directly comparable across all herds within a breed, but not across breeds. Several economically important traits in beef cattle have EPD's. Traits include:

CALVING EASE DIRECT (CED): Predicts the ease with which a bull's calves are born to first calf heifers. EPD's for calving ease are reported as deviations in the percent unassisted births. When comparing calving ease EPD of two sires, the larger EPD indicates a higher percent of unassisted births for calves sired by this bull.

CALVING EASE DAUGHTERS (CEM): Maternal Calving Ease - The ease with which a bull's daughters calve as first calf heifers. EPD's for calving ease are reported as deviations in the percent unassisted births. When comparing maternal calving ease of two sires, the larger EPD indicates a higher percent of unassisted births for calves born out this sire's daughters.

BIRTH WEIGHT EPD (BW): Predicts the difference in average birth weight of a bull's calves compared to calves of all other bulls evaluated. Compare the bull's EPD to the breed average to determine whether he is above or below average for birth weight EPD for his breed. If the birth weight EPD is higher than breed average, he will sire heavier calves at birth than the average bull calf born in 2020.

WEANING WEIGHT EPD (WW): Predicts the difference in average 205 day weight of a bull's calves compared to calves of all other bulls evaluated. Compare the bull's EPD to the breed average to determine whether he is above or below average for weaning weight EPD for his breed. If the weaning weight EPD is higher than breed average, he will sire heavier calves at weaning than the average bull calf born in 2020.

Milk EPD: Maternal (Pure Milk) EPD predicts the difference (due to milking ability) in **average 205 day weight** of a bull's daughter's calves compared to calves of all other bulls evaluated.

YEARLING WEIGHT EPD (YW): Predicts the differences in average 365 day weight of a bull's progeny compared to progeny of all other bulls evaluated. Compare the bull's EPD to the breed average to determine whether he is above or below average for yearling weight EPD for his breed. If the yearling weight EPD is higher than breed average, he will sire heavier calves at yearling than the average bull calf born in 2020.

Carcass Weight EPD (CW): expressed in pounds, is a predictor of the difference in hot carcass weight of progeny.
Carcass Backfat EPD (BF): expressed in inches, is a predictor of the difference in 12th rib backfat of progeny at a given end point.

Carcass Ribeye Area EPD (REA): expressed in square inches, is a predictor of the difference in ribeye area of progeny at a given end point.

Carcass Marbling Score EPD (MARB): The marbling score EPD can be used to select sires that will produce progeny with more marbling at a constant fat or age endpoint. The higher the marbling score EPD, the higher the amount of intramuscular fat in the ribeye muscle. The genetic correlation between marbling score and external fat at the 12th rib is nearly zero. This means breeders can select for increased marbling and will not have to worry about selecting for increased external fat. Intramuscular marbling contributes to the overall eating experience of beef. It is a significant component of juiciness and flavor of the beef product. Intramuscular fat plays a small role in tenderness of beef.

Stayability (STAY): Expressed as the probability that an animal's daughters will remain in production to at least six years of age when compared to the daughters of another animal. A measure of sustained fertility that probably reflects traits such as fleshing ability and structural soundness.

Docility (DOC): is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

\$ Values and Index Values

\$ Value and Index Value EPD values are a way of combining several EPDs together to come up with 1 value for a producer to look at. The individual EPD values are weighted according to importance through statistical methods based on industry market pressures and expressed in dollars. Below are the definitions of the values seen in the catalog:

\$M "Maternal Weaned Calf Value," an index value expressed in dollars per head, predicts profitability differences for retaining replacement females within a herd. Traits included: CED, CEM, WW, Milk, HP, DOC, MW, claw set and foot angle. (Angus only)

\$W "Weaned Calf Value", an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. **\$W** includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size. Useful for producers selling calves at weaning. (Angus only)

\$F "Feedlot Value", an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. (Angus only)

\$B "Beef Value", an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires. (Angus only)

API "All Purpose Index", an index value expressed in dollars per head, evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield. (Simmental only)

TI "Total Index", an index value expressed in dollars per head, evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield. (Simmental only)

For selection of breeding stock, it is important to know how EPD values for an individual animal compare to current breed averages. Average non-parent EPD values for some economically important traits are found in the tables below. These averages are useful for making comparisons within breeds.

AVERAGE EPDs FOR 2020 BORN ANIMALS FROM 2022 BREED SIRE SUMMARIES

Trait	Breed			
	Angus	Purebred Simmental	Fullblood Simmental	Simmental Composite
Calving Ease Direct	7.0	10.80	4.50	12.20
Birth Weight	1.2	1.60	5.20	0.40
Weaning Weight	61.0	77.50	70.0	75.60
Milk	26.0	23.20	36.80	22.60
Yearling Weight	108.0	115.30	98.10	116.40
Docility	18.0	11.40	8.90	12.00
Stayability/SCF		16.70	14.50	15.30
Maternal Calving Ease	8.0	5.70	2.70	6.60
Carcass Weight	47.0	28.30	18.00	31.20
Backfat Thickness	0.013	-0.09	-0.14	-0.04
Ribeye Area	0.61	0.87	0.85	0.66
Marbling	0.61	0.12	-0.08	0.30
Scrotal Circumference	0.86			
\$M	63			
\$W	56			
\$F	84			
\$B	137			
API		130.61	97.51	130.48
TI		77.84	64.01	78.10

Additionally, each EPD value has an accuracy (ACC) value and a Percentile Rank. Accuracy can be defined as the relationship between the estimated EPD of the animal and the "true" EPD of the animal. The accuracy value indicates how much information went into the EPD prediction with values ranging from 0 to 1. Selection of individuals with low accuracy values are still more accurate than basing selection on actual weights and ratios. The Rank % or Percentile Rank tells you where their EPD falls within the range of EPD values. A rank of 20 indicates it is in the top 20% of EPD values. The range for Rank % is 1 to 99%.

Alabama BCIA's Policy on Genetic Defects:

Alabama BCIA encourages all consignors to test their animals for any genetic defects as directed by their respective breed association. The genetic defect status of animals to be sold in BCIA sales have been verified with the respective breed association by the sale coordinator. No potential carriers of any genetic defects will be sold in BCIA sales, unless a potential genetic defect status has recently arisen. Any known carriers of a genetic defect are noted by announcement in the sale catalog. Any updates will be posted by a sale supplement sheet or vocally from the sale block for full disclosure. Please, therefore, take note all animals published in this catalog are free of any known genetic defects at the time of publication unless noted.

Care of Newly Purchased Performance Tested Bulls

Several management practices should be observed when newly purchased bulls are brought home. These practices can help to ensure that each new bull has a long and productive future with good productive performance.

1. **Feeding:** This is a young calf (13 to 16 mo. old) that still has a lot of growing to do. Feed this young bull well. Feeding 5 to 10 pounds of grain and 1 to 2 pounds of a protein source will assist him in the completion of the growth process. Continue to supplement this young bull during and after the breeding season.
2. Only use this young bull in a 45 to 60 day restricted breeding season. Observe him closely to see if he is servicing females properly.
3. Young bulls should be limited to a minimum number of cows to service. The number is decided by his age.

Bull's Age	No. of Females
12-15 months	10 to 12
15-18 mo	12 to 18
18-24 mo	18 to 25
24 mo and older	25 to 35

4. Place young bulls in well fenced lots before and after the breeding season to keep bulls away from cows in heat. There should be shade and plenty of clean water in each lot. Provide free-choice minerals and routinely treat for parasites.
5. Remember bulls are guaranteed by the consignors to be breeders only if they are managed correctly after the sale.

Care of Newly Purchased Heifers

Heifers need to be taken care of just like new bull purchases. With current prices, these heifers need to have a long and productive life, so proper care is essential.

1. Separate from herd for 30 days. Keep your newly purchased heifers separate from the herd for 30 days. This will accomplish several things. First, it will prevent spread of disease between purchased heifers and your herd in case there is a health issue. Secondly, it will acclimate new heifers to their new surroundings, including you. Third, it will allow you to easily observe bred heifers for signs of abortion, because hauling is a major stressor on that heifer.
2. **Bred Heifer Feeding:** Heifers are growing animals too. A bred heifer should remain growing and gaining throughout pregnancy. A target ADG is 1 lb/day with a body condition score of 6 at calving. Do not try to starve calf birth weight out of your heifers. All this will do is affect body condition score and rebreeding rates. Target body weight at calving is 85% of mature body weight.
3. **Open Heifer Feeding:** Open heifers should reach 65% of their mature body weight by breeding. Open heifers need to be bred at 14 to 15 mo of age to calve as 2-yr-olds. Heifers with adequate weight and flesh should reach puberty before the month she needs to be bred. Heifers which have cycled at least once before breeding have higher conception rates.
4. Don't forget about free-choice mineral access and plenty of fresh, clean water. Also routinely treat for parasites after the 1st killing frost and before green-up in the spring.

Looking for Hauling?

We will be glad to assist you in making the most economical trucking arrangements possible.

Additional Information: All heifers sired by natural service by bulls from the proven Maples Stock Farm genetic program. Produced by predominately Angus dams, who have been selected for balanced traits for over 40 years with special interest being paid to structural correctness, longevity & growth. All heifers boosted for respiratory complex, Leptospirosis & Vibriosis and dewormed with Safeguard on 10/8/22.

NOTES

NOTES

FOOT SCORE GUIDELINES

Foot Angle (5 is ideal)

1

Extremely straight pasterns.
Very short toe. Unsound.

2

Straight front and rear pasterns.
Marginally unsound.

3

Moderately straight front
and rear pasterns.

4

Slightly straight front
and rear pasterns.

5

Ideal. Approximately 45-degree angle
at pastern joint. Appropriate length of
toe and depth of heel.

6

Slightly shallow heel and long toe.

7

Moderately shallow heel and long toe.
Somewhat weak pasterns.

8

Shallow heel and long toe.
Marginally unsound.

9

Extremely shallow heel and long toe.
Extremely weak pasterns. Unsound.

Claw Set (5 is ideal)

Extremely weak, open,
divergent claw set. Unsound.

1

Open, divergent claw set.
Marginally unsound.

2

Moderately open/divergent
claw set.

3

Slightly open/divergent
claw set.

4

Ideal. Symmetrical claws, with
appropriate space between claws.

5

Slight tendency for claws to curl.
One claw may be slightly larger
than the other.

6

Tendency for claws to curl, with one
claw larger than the other.

7

Moderate scissor claw and/or screw
claw. Curling of one or both claws. Near
crossing of claws. Marginally unsound.

8

Extreme scissor claw and/or screw claw.
Pronounced curling of one or both claws.
Crossing of claws. Unsound
