## **Alabama Beef Cattle Improvement Association**

**40 County Road 756 • Clanton, AL 35045 • 205-646-0115**

Dear Cattlemen:

Hello and welcome. Within this sale catalog, you be able to review the detailed performance information and data for the bulls offered in the 25<sup>th</sup> Annual Alabama BCIA Fall Round Up Bull Sale. This sale event will be held on Friday, November 13, 2020 at 12:00 Noon at the Alabama Livestock Auction in Uniontown, Alabama.

Bull selection is a very important building block of the genetics in your beef cattle operation. Making informed, sound herd bull selections makes a significant impact on the potential genetic and production level of your herd. The genetic impact of a herd sire is greatly increased when selecting replacement heifers from your herd. After 10 years, approximately 88% of the genetic makeup of a herd will have come from herd bulls selected. Therefore, the value of detailed performance data in bull selection is crucial.

Providing education for beef cattle producers on performance information is a primary goal of Alabama BCIA. Definitions and values of genetic selection tools such as Expected Progeny Differences (EPDs) and multi-trait selection indexes are fully provided for you in our sale catalogs. Current breed average EPD values for a variety of traits are published for each breed participating in a marketing event to inform and guide beef producers in selection of the bulls offered. Production performance in birth and weaning weights and ratios are provided. Guidelines for the care of newly purchased bulls are supplied to serve as a guide for proper care to ensure that each newly purchased bull has a productive future. Guides for planning for your breeding season to account for how many breeding bulls are needed to successfully breed your cows and heifers is also provided for you. All bulls offered in this sale event have passed a recent breeding soundness exam. Scrotal circumference measurements and current weights are documented.

All bulls offered in this sale event have been tested and determined test negative for Trichomoniasis within 60 days of this sale date. Trichomoniasis is a bovine venereal disease that can cause substantial reproductive and economic loss in cow-calf operations using natural service. This disease is commonly referred to as "Trich." An Alabama Cooperative Extension System educational publication is included for you in the back of this catalog to learn more about this disease. Establish a working relationship with your veterinarian to implement a complete herd health program.

Please contact me or any of the sale consignors if you have questions regarding the 2020 Alabama BCIA Fall Round Up Bull Sale and its offering. We would be happy to assist you.

Sincerely,

Michelle F. Elmore  
Extension Animal Scientist/Beef Cattle Improvement

Office Phone: (205) 646-0115, Cell: (205) 287-1080, Email: [elmormf@auburn.edu](mailto:elmormf@auburn.edu)

*Alabama BCIA's mission is to promote, educate and facilitate the use of performance data, record keeping and marketing opportunities for BCIA members while providing a leadership role to improve the Alabama cattle industry.*

# Explanation of EPDs and Reference Information

**EXPECTED PROGENY DIFFERENCES (EPD):** The expected difference in performance of a bull's progeny when compared to the average progeny performance of all bulls evaluated. EPD's are reported in pounds and are directly comparable across all herds within a breed, but not across breeds.

**ACCURACY (ACC):** A measure of certainty regarding the genetic merit of a bull. Accuracies are reported as a decimal number between zero and one. Larger values indicate greater accuracy and more certainty that a bull's EPD values will not change with additional progeny information.

**CALVING EASE DIRECT (CE):** Predicts the ease with which a bull's calves are born to first calf heifers. EPD values for calving ease are reported as deviations in the percent of unassisted births. When comparing calving ease EPD values of two sires, the larger EPD value indicates a higher percentage of unassisted births for calves sired by this bull.

**MATERNAL CALVING EASE (MCE):** The ease with which a bull's daughter's calves as first calf heifers. EPD values for maternal calving ease are reported as deviations in the percent of unassisted births. When comparing maternal calving ease EPD values of two sires, the larger EPD value indicates a higher percentage of unassisted births for calves born out of this sire's daughters.

**BIRTH WEIGHT EPD (BW):** Predicts the difference in average birth weight of a bull's calves compared to calves of all other bulls evaluated. Compare the bull's EPD to the breed average to determine when he is above or below average for birth weight EPD for his breed. If the birth weight is higher than breed average, he will sire heavier calves at birth than the breed average.

**WEANING WEIGHT EPD (WW):** Weaning weight EPD predicts the difference in average adjusted 205-day weight of a bull's calves compared to calves of all other bulls evaluated.

**MILK EPD:** Maternal (Pure Milk) EPD predicts the difference in **average 205 day weight** of a bull's daughters calves (due to differences in milking ability) compared to calves of all other bulls evaluated. Note, this is pounds of calf weaning weight and **not** pounds of milk.

**YEARLING WEIGHT EPD (YW):** Yearling weight EPD predicts the difference in average adjusted 365-day weight of a bull's progeny compared to progeny of all other bulls evaluated.

**CARCASS WEIGHT EPD (CW):** Carcass weight is a good predictor of **total** retail product, but not **percent** retail product. Selecting sires with higher EPD values for carcass weight will result in progeny carcasses with more total retail product at a constant fat and age endpoint. The industry target weight range for carcasses is 650 to 850 pounds.

**MARBLING EPD (Marb):** The marbling EPD can be used to select sires that will produce progeny with more marbling at a constant fat or age endpoint. Intramuscular marbling contributes to the overall eating experience of beef.

**RIBEYE AREA EPD (REA):** expressed in square inches, is a predictor of the difference in ribeye area of progeny at a given end point.

**FAT THICKNESS EPD (FAT):** Expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

**YIELD GRADE EPD (YG):** An estimate of the yield of closely trimmed, boneless retail cuts from the round, loin, rib and chuck. YG EPD is expressed as a deviation. Negative values are desirable. To use it, one must keep in mind that it is in yield grade units. Therefore, lower is better.

**MATERNAL WEANED CALF VALUE (\$M),** an Angus index, expressed in dollars per head, predicts profitability differences for retaining replacement females within a herd. Traits included: CED, CEM, WW, Milk, HP, DOC, MW, claw set and foot angle. Angus breed average 59.

**WEANED CALF VALUE (\$W),** an Angus index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in BW, WW, Milk and MW. Angus breed average 56.

**BEEF VALUE (\$B),** an Angus index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires. Angus breed average 128.

**COMBINED VALUE (\$C),** an Angus index, expressed in dollars per head where commercial producers replace 20% of breeding females annually with replacement heifers retained. Feeder heifer and steer calves are sent to the feedlot with retained ownership and sold on a quality-based carcass merit grid. EPDs included: CED, CEM, WW, YW, Milk, HP, DOC, MW, foot angle, claw set, DMI, Marb, CW, RE and Fat. Angus breed average 224.

**Terminal Sire Index (TSI),** a Charolais index based on BW, WW, YW, REA, CW, MARB EPDs to estimate genetic relationships with economic value based on 3-year USDA data. Charolais breed average 203.77.

**Balanced Index (Bal.)** a Santa Gertrudis index for producers who retain replacement heifers and market feeder calves on a grid basis or feeder calf price based on feedlot and carcass performance. Reported as a percentile ranking from top 1% to bottom 99%.

**Cow/Calf,** a Santa Gertrudis index for producers retaining replacement heifers where all feeder calves are marketed at or soon after weaning with no feedlot or carcass performance base in calf price. Reported as a percentile ranking from top 1% to bottom 99%.

**Terminal (Term.)** a Santa Gertrudis index for producers not retaining replacement heifers and feeder calves are marketed on a grid basis where carcass traits determine price received. Reported as a percentile ranking from top 1% to bottom 99%.

**API .** All Purpose Index evaluates Simmental sires on the entire cowherd with a portion of their daughters being retained for breeding, steers and remaining heifers being put on feed and sold grade and yield. All EPDs, except tenderness, are taken into consideration. Average- Purebred 127.74. Hybrid 127.73.

**TI .** Terminal Index is designed for evaluating Simmental sires' economic merit when all offspring are placed in the feedlot and sold grade and yield. Consequently, maternal traits such as milk, stayability and maternal calving ease are not considered. Average- Purebred 74.65. Hybrid 74.98.

## Explanation of EPDs and Reference Information

Average EPD Values for Non-Parent Bulls from 2020 Breed Sire Summaries											
Breed	CED	CEM	Birth Wt.	Weaning Wt.	Yearling Wt.	Milk	Cwt	Marb	REA	Fat	YG
Angus	6.0	9.0	1.3	56.0	99.0	25.0	42.0	0.55	0.56	0.012

Hybrid Simmental (SimAngus)	12.0	6.60	0.50	72.20	111.50	22.60	31.90	0.28	0.67	-0.05	-0.24

Whatever system your bull has been evaluated in, young bulls do require an adjustment period prior to being used for breeding. This is referred by some as a "hardening period". Others refer to it as a "let down" period.

Young bulls, especially those of breeding age, do require attention for continued growth and proper development. Regardless if they are home raised or newly purchased, proper feeding, care and management now will give your bull the opportunity to continue growing and allow him to develop into a sound and profitable herd sire.

Several management practices should be observed when newly purchased bulls are brought home. These practices can help ensure that each new bull has a long and productive future with good productive performance.

- Have an area with fresh water and good quality hay to keep the bull(s) in upon arrival, so they will have time to settle down and become familiar with the surroundings.
- After allowing to drink water and eat hay, you may feed additional energy at approximately 1 percent of body weight
- If you are planning to turn the bull(s) out with the cow herd upon arrival, bring the herd to a holding area and allow the bull(s) to return to the pasture with the herd.
- Avoid turning your newly purchased bull(s) in with an older bull. We must reduce the chance of injury.
- Consider limiting the number of females you want to settle during the breeding season to 20 the first year.
- Avoid excessive loss of body condition before or during the breeding season. You may want to rest him for 1 to 2 weeks depending on the breeding activity of your herd. If necessary, feed him additional energy if excessive loss in body flesh condition is noticeable. Hay and/or pasture alone will not provide sufficient nutrients to meet the requirements of young, growing, active bull(s).
- If there is one bull in the pasture, as he breeds the cows, record the breeding date. Non-return to heat is a good indication your bull is settling the cows.
- Treat for internal parasites at the end of the breeding season. Provide effective external parasite control as needed.
- **Remember, bulls are guaranteed by consignors to be breeders only if they are managed correctly after the sale.**

Young bulls should be limited to a minimum number of cows to service. The number is decided by his age. The following guidelines can be used:

### Bull's Age

12-15 months
15-18 months
18-24 months
24 months and older

### Number of Females

10 to 12
12 to 18
18 to 25
25 to 35

Place young bulls in well fenced lots before and after breeding season to keep bulls away from cows in heat. There should be shade and plenty of clean water in each lot. Provide free-choice minerals and routinely treat for parasites.

### Relationship of Ultrasound Intramuscular Fat (%) to USDA Quality Grades, Marbling Degree, and Marbling Score

Percent Intramuscular Fat	Quality Grade	Marbling Degree	Marbling Score
2.3-3.0	Select-Select+	Slight 0-40	4.0-4.4
3.1-3.9		Slight 50-90	4.5-4.9
4.0-5.7	Choice-	Small 0-90	5.0-5.9
5.8-7.6	Choiceo	Modest 0-90	6.0-6.9
7.7-9.7	Choice+	Moderate 0-90	7.0-7.9
9.9-12.1	Prime-	Slightly Ab 0-90	8.0-8.9
12.3-	Primeo	Moderately Ab 0-	9.0-

### Alabama BCIA's Policy on Genetic Defects:

Alabama BCIA encourages all consignors to test their animals for any genetic defects as directed by their respective breed association. The genetic defect status of animals to be sold in BCIA sales have been verified with the respective breed association by the sale coordinator. No potential carriers of any genetic defects will be sold in BCIA sales, unless a potential genetic defect status has recently arisen. Any known carriers of a genetic defect are noted by announcement in the sale catalog. Any updates will be posted by a sale supplement sheet or vocally from the sale block for full disclosure. Please, therefore, take note all animals published in this catalog are free of any known genetic defects at the time of publication unless noted.

**Note Regarding Trichomoniasis:** Please take note that ALL bulls in this sale, both virgin and non-virgin, have been tested and determined test negative for Trichomoniasis within 60 days of the sale date by an accredited laboratory, as per the guidelines of this sale. To learn more about Trichomoniasis, please refer to the back of this catalog to review ACES publication ANR-1333. Establish a working relationship with your veterinarian to implement a complete herd health program.

## SALE TERMS AND CONDITIONS

Except for those stated in the below terms and conditions, there are no warranties, either expressed or implied, as to the merchantability of fitness for a particular purpose with respect to the cattle being sold at this auction.

The warranties and guaranties set forth in the "terms and conditions" are in lieu of all other warranties either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy of the buyer, or any party claiming through buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

**Time and Location:** The 25<sup>th</sup> Annual Fall Round Up Bull Sale will be held Friday, November 13, 2020 at 12:00 Noon at Alabama Livestock Auction, Inc. in Uniontown, Alabama (334) 628-2371.

**Bidding:** All animals will be sold to the highest bidder. The auctioneer will settle any disputes in bidding and his decision on such matters is final.

**Terms:** The terms of the sale are cash or check unless credit arrangements, including any possible reservation of security interest, have been made by the interested party with the vendor, Alabama BCIA, prior to sale. The party financially responsible for each purchase will be the person's name that registered to the purchasing buyer number.

**Buyer Numbers:** On the day of the sale, prospective buyers are asked to acquire a buyer number from the front desk of the Alabama Livestock Auction.

**Purchaser's Risk:** Each animal becomes the purchaser's risk as soon as sold. Buyers are encouraged to transport their purchases on sale date. Arrangements need to be made in advance by the buyer for any animals held over for a later transport date.

**Certificate of Registry:** A transferred certificate or registry will be furnished to the purchaser of each animal within sixty (60) days following date of sale or receipt of full payment.

**Health:** All animals are eligible for interstate shipment. Interstate health certificates will be available for each animal upon request.

**Announcements:** Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

**Breeding Guarantee:** Every bull selling is guaranteed to be a breeder with the exception of:

- a) injury or disease occurring after sale.
- b) gross negligence or willful misconduct on the part of the purchaser.

All claims for adjustment must be made in writing within six (6) months of the sale date. Any bull which settles cows by natural service and passes a fertility test by competent veterinarians, mutually agreed upon by buyer and seller, during any 6 month period of trial (provided for in paragraph 2 of the section of these sale terms and conditions entitled ("**Option and Privilege of Return and Adjustment**") shall be considered a breeder. Any guarantees with respect to the ability to freeze semen shall be by separate agreement between the buyer and seller.

**Identification:** Seller offers each animal with a readable tattoo corresponding to its registration paper. Buyer agrees to check tattoo for accuracy. In those cases where a nickname is used, it shall be accompanied by

the official registered name and number of the animal.

**Options and Privileges Of Returned Or Adjustment:** All claims for adjustment must be made in writing within six (6) months of the sale date.

In the event the animal is claimed to be a non-breeder, the animal may be returned to the farm of the seller, if in good condition and complying with the health requirements of the seller's state. The seller shall be entitled to a six (6) month trial following the return of the animal in which to prove the animal is a breeder. If at the end of six months the seller is unable to prove the animal is a breeder, the seller shall, at the option of the buyer, replace the animal with another of equal value, provide a future sale credit, or refund the purchase price. The return of the full purchase price, shall be in any case deemed full satisfaction and settlement. Any expense incurred from transportation of an animal claimed to be a non-breeder shall be the responsibility of the purchaser, except that the seller shall be responsible for transportation costs in excess of the distance between the purchaser's farm and the location where the sale took place. If the seller proves the animal to be a breeder, it shall be the obligation of the purchaser to take delivery of the animal and pay all expenses incurred for transportation.

If the animal is sold, and at a later date, proves not to be eligible for registration under the Association rules, the seller shall be obligated to make satisfactory adjustment on the purchase price to the buyer, or at the buyer's option refund the purchase price upon the return of the animal to the farm of the seller. Any expense incurred for transportation shall be the responsibility of the purchaser, except the seller shall be responsible for the transportation costs in excess of the distance between the purchaser's farm and the location where the sale took place.

**Rights and Obligations:** The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction. All persons attending the sale do so at their own risk. The seller, Alabama BCIA, the Alabama Cooperative Extension System, or Auburn University will not assume any liability, legal or otherwise, for the safety of those attending this sale.

**Mail Bids:** Mailed or telephoned bids will be handled in a most confidential manner if you are unable to attend the sale personally. Please contact the Auctioneer (Col. Tommy Barnes) or Michelle Elmore.

# Bovine Trichomoniasis

- ▶ Learn vital information about trichomoniasis, its effects on cow-calf operations, and ways to avoid it in a natural service herd.

Trichomoniasis is a bovine venereal disease that can cause substantial reproductive and economic loss in cow-calf operations that use natural service. The disease is caused by the protozoan *Tritrichomonas foetus* (*T. foetus*) and is commonly referred to as "Trich." Bulls can become chronic, asymptomatic carriers of *T. foetus* because the organism can live in the microscopic folds of a bull's penis and prepuce. Infections in cows, however, can result in early embryonic death, abortion, pyometra (pus-filled uterus detected at pregnancy examination), or infertility, influencing the reproductive performance and economic profitability of a cow-calf operation.

## How Does Trichomoniasis Affect a Cattle Herd?

Some indications that your herd may be experiencing a problem with trichomoniasis:

- Repeated breeding that results in long, drawn-out breeding and calving seasons.
- A high percentage of open cows at pregnancy examination, or detection of a wide range of gestational ages. Most embryonic/fetal losses occur during the first trimester; late term abortions are not common with trichomoniasis. Therefore, most reproductive losses are detected during pregnancy examination or the calving season.
- Pyometra(s) detected at pregnancy examination; this typically occurs in less than 5 percent of animals.
- Bulls show no clinical signs but can become chronic carriers.
- Cows and heifers will rarely show a very mild vaginal discharge, but this is usually never noticed. Therefore, like the bull, there are typically no initial clinical signs that a cow or heifer is infected with *T. foetus*.
- Cows and heifers can usually clear the infection in 2 to 6 months (sometimes longer), but usually not before sustaining some type of reproductive loss.

With so few noticeable clinical signs of trichomoniasis, it is important to view a herd's overall reproductive performance to look for any indication of a problem. Trichomoniasis should be suspected, along with many other culprits, anytime herd reproductive performance declines in a natural service herd. In herds with new infections, the results can be devastating, with a long, drawn-out calving season and only a 50 to 70 percent calf crop. In herds where trichomoniasis has gone undetected for a long time, the results may be less dramatic because of temporary herd immunity. In such cases, the calf crop may only be reduced 5 to 10 percent; however, this loss is still enough to have a substantial economic impact.

## Economic Impact

The economic impact of trichomoniasis is primarily due to three factors:

- Loss of calf crop due to early embryonic loss or abortion
- Loss of income due to lighter weaning weights resulting from delayed conception and late calving (since calves are born later in the season and then sold at lighter weights)
- Culling of open cows and infected bulls, and the costs associated with replacing valuable breeding stock

## Risk Factors Associated With Trichomoniasis

Some factors that put a herd at risk for acquiring and maintaining trichomoniasis:

- Natural service
- Using leased or borrowed bulls, or introducing any "non-virgin" bulls into a herd without prior testing
- Large herd size (smaller herd size decreases exposure potential)

## Transmission

*Tritrichomonas foetus* is transmitted when an infected bull breeds a susceptible cow or heifer, or when a susceptible bull breeds an infected cow or heifer. Very rarely is *T. foetus* ever transmitted by contaminated semen or artificial insemination (AI) equipment, especially if semen is purchased from reputable AI studs and used with hygienic AI techniques. Reputable AI studs have strict biosecurity and quality control measures in place to ensure that their bull semen is not contaminated with *T. foetus*. So, AI using hygienic techniques with bull semen from a reputable source is an excellent way to prevent the introduction of *T. foetus*. However, AI may not be practical in larger herds.

## Treatment

Trichomoniasis is usually self-limiting in cows and heifers (they will usually clear the infection in 2 to 6 months), as opposed to bulls that typically become chronically infected. Unfortunately, one of the complicating factors associated with trichomoniasis is that there are currently no effective treatments with Food and Drug Administration approval. Therefore, infected bulls must be culled.

## Prevention of Trichomoniasis

Some recommended practices to prevent the introduction of *T. foetus* into a cattle herd include:

- Utilize artificial insemination.
- Have your veterinarian test new non-virgin bulls at least once, along with a breeding soundness evaluation. This includes leased and borrowed bulls.
- Purchase replacement animals from reputable sources, and test appropriate animals prior to introducing them to the herd.

Talk to your regional Animal Science and Forages Extension agent and your veterinarian about trichomoniasis. If you suspect trichomoniasis in your herd, contact your veterinarian for a thorough investigation.
