

- 
- * Staging is a marketing tool to make the property more desirable. Setting the best scene, highlighting the house's features.
 - * Home staging will make your property stand out in a saturated market: You have 7 seconds to capture viewers' attention online. Your pictures have a lot of work to do in such a short time.
 - * 75% of viewers are unable to visualise what an empty room could look like. They struggle to see the size, space and functionality of a vacant property, leading them to discount entirely or put in a low offer as they believe you are desperate to sell.
 - * Staging your property before going to market ensures that you are one step ahead of the competition. Increasing the property's saleability and achieving its best possible price.
 - * Staged properties are let three times faster, producing lower vacancy rates and maximising the rental income.
 - * Home Staging encourages vendors to declutter & organise their homes in advance of selling which reduces the time & stress associated with the actual move itself!
