

**AIA**  
Idaho

The American Institute of  
Architects

Idaho Chapter

2019-2020

Membership Directory

# Introduction

AIA was founded in 1857 by 13 architects.

Now we're over 90,000 members strong.

Headquartered in Washington, DC, we have over 260 chapters around the world.

AIA is a vibrant community of architecture and industry professionals that are transforming the profession. Members enjoy access to industry-best benefits, products and services that support practice and professional development.

## **AIA mission**

The AIA is the voice of the architectural profession and a resource for its members in service to society.

## **The AIA is dedicated to high standards in professional practice**

The American Institute of Architects (AIA) is a professional organization that aids architects in serving the public's needs. AIA creates awareness of the role architects and architecture play in American society.

The AIA Idaho Chapter was founded in 1951. Today, the Chapter represents over 300 licensed architects and associated professionals. Boise serves as AIA Idaho headquarters with four local sections statewide. AIA members adhere to the code of ethics and professional conduct that assures clients, the public and colleagues of their dedication to high standards in professional practice.

## **Talk with an AIA architect for smart decisions and creative solutions**

Large or small, every building project involves many complicated and challenging decisions. You can discuss these decisions with your family, friends and neighbors; everyone will have an opinion. But an architect who is an AIA member is a professional who has the education, experience and vision to guide you through the entire design and construction process successfully.

An AIA architect can not only ease the way by helping you make informed decisions and avoid costly surprises, but also can provide creative solutions. Solutions that can make your home or office more efficient, functional and aesthetically pleasing. Solutions that can help maximize the investment you will make. The result is creating an environment that meets your needs, reflects your individuality and provides enjoyment for everyone who uses it.

## Why should you hire an AIA architect

Few people realize how complicated it is to build – that is until they find themselves lost in the maze of design options, building codes, zoning laws, contractors, and so on. No two building projects are exactly alike, so there is no single, clear-cut path to follow.

The architect is the one professional who has the education, training, experience, and vision to guide you through the entire design and construction process, from helping you define what you want to build to helping you get the most for your construction dollar.

Architects see the big picture. They don't just design four walls and a roof – they create total environments, interiors and exteriors, that satisfy functional needs and are exciting, dynamic spaces in which to work and live.

Whether you are remodeling, adding on, or building from scratch, the architect can guide the way. Working with contractors and other construction professionals, architects can help you end up with a well-designed project that meets your needs and works with your budget and time frame.

## Architects can save you money

The architect's services are a wise investment for the money, not an added cost to your project. Why?

**Because** a well-conceived project can be built more efficiently and economically. Architects plan your project with you. As your ideas evolve, changes can be made on paper much less expensively than later on when construction is underway. Thorough drawings also make it easier for the contractor to accurately price and build your project.

**Because** energy-efficient buildings can save you money on fuel bills down the road. An architect can design a building to maximize heating from the sun and let in natural light, thus reducing your heating, cooling, and electric bills over time.

**Because** the architect can work with your budget and help you select the appropriate materials and workmanship at a fair price. Architects develop the drawings and specifications to help you get bids for construction that are based on your requirements.

**Because** an architect can help you choose materials and finishes that are durable as well as beautiful, saving on frequent maintenance and replacement costs. Architects work to stay abreast of advances in roofing, brick work, floor tiling, paint finishes, etc. Their familiarity with the full range of materials enables them to suggest the appropriate materials for your project.

**Because** good design sells. A well-designed house has a higher resale value. A well-designed store draws customers. A well-designed work environment attracts employees and increases productivity.
