WHEEL ALIGNMENT SYSTEMS

670 XD

HOFMANN[®] 

FAST. ACCURATE. USER-FRIENDLY.

The *geoliner* 670 XD Wheel Alignment System combines unmatched accuracy and user-friendly features with a conventional imaging aligner design. And its extensive vehicle specifications database instills even more confidence and assures the job is done right the first time.

Accurate, real-time measurements are provided by our patented imaging technology, including high-resolution cameras and the industry's most advanced XD targets.

Patented Advanced Dimensioning

Cross-diagonal measurements identify frame or structural damage. Rolling Radius identifies mismatched tire sizes; a potential cause of vehicle pulling and drive complaints.

Patented EZ-Toe

Turn the front wheels and access difficult adjustment points while still displaying centered toe readings

Patented Ride Height Measurement

Measure ride height and obtain proper alignment specifications for those vehicles requiring it.

Easy to Follow Help Videos

View detailed videos of how to make needed adjustments to complete even the most complex tasks.

Versatile, Accurate Hardware

High resolution cameras produce accurate, live alignment readings and diagnostic data. Passive front and rear XD targets improve durability with no electronics to damage.

VODI™

Vehicle Orientation Directional Indicator (VODI) guides the technician through the measurement process.

Touchless AC400 Wheel Clamping System

Fast and easy to use, the AC400 touchless wheel clamping system from Hofmann® provides secure clamping without touching the rim. This patented technology allows service technicians to receive accurate and repeatable results coupled with ease of use and durability.
