Sheirdrim Renewable Energy Development

Public Information Days

Why are we contacting you?

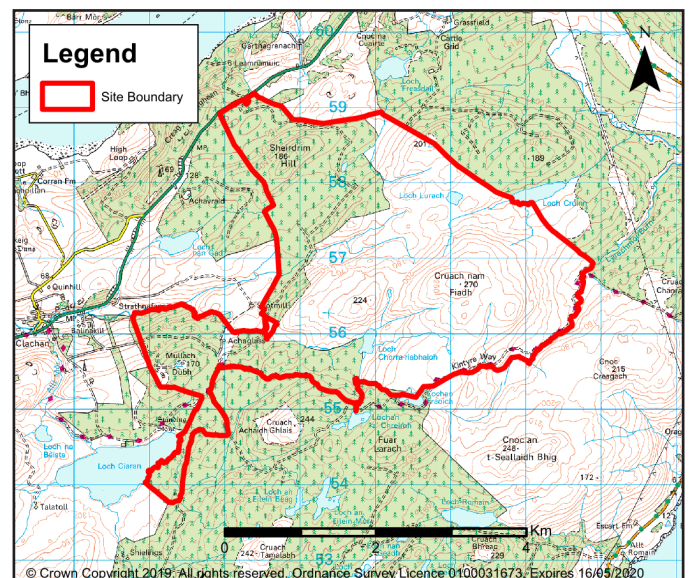

ScottishPower Renewables (SPR) invites you to attend information days to introduce proposals to develop Sheirdrim Renewable Energy Development, located in the northern end of the Kintyre peninsula and approximately 10km south-west of Tarbert, within Argyll and Bute.

The proposed Development is anticipated to consist of approximately 26 wind turbines with tip heights of up to 149.9m with blade lengths of up to 65m. The deployment of other renewable technologies within the site is also being proposed, including solar photovoltaic (solar PV) generation and battery storage.

Early consultation is key to developing our projects and throughout the development process we ensure local communities and stakeholders are given the opportunity to provide feedback and are kept informed of project progress. This Public Information Day is a great opportunity for SPR to hear the thoughts of the local community on this project. It is also a chance for you to meet the project team, learn more about the renewable energy project development process, to find out about

the survey work we have undertaken and to ask any questions you may have about the project.

Development Location

Next Steps

After meeting with your community and gathering feedback on our proposals, we will continue to update the design of the proposed development ahead of submitting an application to the Scottish Government Energy Consents Unit, which we are anticipating to be in autumn 2019.

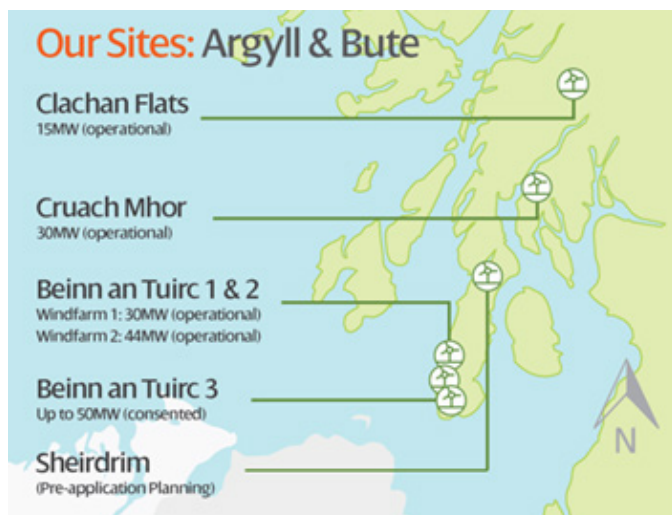

Who are we?

ScottishPower Renewables is part of the ScottishPower group of companies operating in the UK under the Iberdrola Group, one of the world's largest integrated utility companies and a world leader in wind energy. ScottishPower now only produces 100% green electricity – focusing on wind energy, smart grids and driving the change to a cleaner, electric future. The company is investing over £4m every working day in 2019 to make this happen and is committed to speeding up the transition to cleaner electric transport, improving air quality and over time, driving down bills to deliver a better future, quicker for everyone.

ScottishPower Renewables is at the forefront of the development of the renewables industry through pioneering ideas, forward thinking and outstanding innovation. Our ambitious growth plans include expansion of our existing onshore wind portfolio, investment in new large scale solar deployment and innovative grid storage systems including batteries. The company is also delivering the Iberdrola Group's offshore windfarms in the southern North Sea off East Anglia as part of an international pipeline of projects across Europe and the USA.

With over 40 operational windfarms, we manage all our sites through our world leading Control Centre at Whitelee Windfarm, near Glasgow.

SPR strive to be good neighbours in all aspects of their work and are committed to Argyll and Bute and to maximising the opportunities for local communities to benefit from their projects.

Did you know?

To date, SPR's operational windfarms have contributed more than £29 million of support towards community initiatives across the UK, with their existing local windfarms (Cruach Mhor, Clachan Flats and Beinn an Tuirc) contributing over £1,500,000.00 of support to Argyll and Bute communities.

With established sites nearby, SPR has a history of working positively with local communities within the region. We are keen to ensure employment and the business skills required to maximise economic benefits can be delivered locally to ensure those who live near our sites benefit.

Responsible Design

We believe in open consultation and welcome your feedback to inform the renewable energy site design process. Our proposals have been shaped by the results of ongoing environmental and technical studies we have undertaken at the proposed site. We also give careful consideration to how this proposal fits within the existing landscape, considering its visibility from key viewpoints in the surrounding area.

Powering your community

We are committed to being a responsible developer of renewable energy and we strive to be good neighbours in all areas of our work.

We encourage as many people as possible to get involved in and to learn more about our projects, particularly in understanding the local economic and social benefits our developments can create.

As the development of Sheirdrim Renewable Energy Development progresses we will engage with communities, stakeholders and the local council to determine how benefits could be delivered to best meet the needs of the local area, should the project be consented.
