

A long standing client invited MRF Contracting to quote for a new 800m security fence and two vehicular access gates to secure their new Water Treatment Works. The site had various constraints including buried services, the potential for unexploded ordinance (UXO), various soft and hard digs, vegetation which required removal and a tight timeframe.

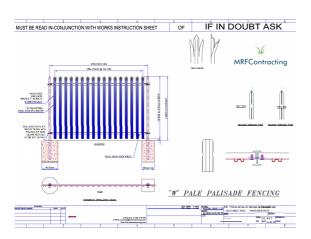

MRF Contracting's buying team went to work and soon had prices back from various suppliers, MRF Contracting submitted a quote to the client and were appointed principle contractor within a few weeks.

Our SMSTS project manager produced the job pack, H&S file and met regularly with the client to minimise potential issues, unknown costs and ensure the project progressed smoothly. The area was screened and all members of staff were briefed on UXO's.

Vegetation Clearance

A remote forestry mulcher clearing fence lines

MRF drew up specifications for the clients approval

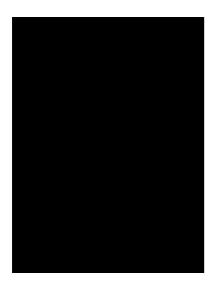

## Service tracing

All areas were scanned using CAT / SGen equipment and marked out with paint / flags

Trial holes were dug to prove all service depths

Our skilled, trained operators completed the install using various machinery

Email: office@mrfcontracting.com

All measurements were checked, agreed with the client prior to invoicing.

Completed fencing

All fencing was completed on-time, within budget and with zero injuries or near misses reported.

Contact MRF office team to discuss your requirements with us.
